>was given a Atari SX 212 modem. Where can we get communications software
>so she can get on the 'net? Local Isp's are clueless, they only have Mac

Try

ftp.demon.co.uk
ftp.cnam.fr
atari.archive.umich.edu
micros.hensa.ac.uk
src.doc.ic.ac.uk

and look for WWW131 and OASIS135E. At least 1Mb (preferably 2) is
needed. A hard disk is a requirement really but you might get away
with a twin floppy system at a push.

>cache disk? What do I do?

Make sure you have HSMODEM installed. Then from the WWW131 release
concentrate on getting STiK configured. Use the Finger client or the
IRC client for testing this. Once you have them sorted out, then go
onto Cab because errors in Cab can be caused from STiK, Cab and
cab.ovl and there is no telling which is responsible. If you can get
IRC to work then you know STiK is communicating ok. Ensure cab.ovl is
in the same folder as cab.app - without it Cab cannot use STiK.

One really tricky problem concerns idiot provider support staff. STiK
currently only works with plain uncompressed SLIP, *not* CSLIP. On
more than a few occasions people have been told they are getting SLIP
when in fact they are getting CSLIP - some staff don't know the
difference! Cab & STiK get the blame for this. Ask about VJ
compression - if the person doesn't know what you are on about, ask
for someone who does, and get them to turn it off.

1782. English Papyrus 4 - When?

Newsgroup: comp.sys.atari.st
Date: 1996-08-02 00:00:00 UTC
From: Michael Clemmetsen <Michael.Clemmetsen@sunderland.ac.uk>
Message-ID: <3201D33A.5E73@sunderland.ac.uk>
Source record: 140838

How many people are sick and tired of waiting for HiSoft to complete the translation of Papyrus 4?

They don't seem to be updating their web page and the last time I got an email back from them they said it would be ready in June. If they ever do complete it, the German version will probably be at version 6 :-(

I've put off buying version 3 because the release of version 4 always seemed imminent and I did not want to be stung by upgrade costs a week after I'd forked out.

If HiSoft can't be bothered to complete this work, surely the guys at R.O.M. should look for another English distributor (Systems Solutions would be an obvious choice). All the time an English version does not exist R.O.M. is losing money, so it's in their interests to sort this out. So if anybody at R.O.M. reads this, I'm sure I'm not the only one who would like to hear your views on this matter (perhaps someone who knows an email contact for R.O.M. could forward this?).

Regards,

Michael

The problem is most likely flow control. Make sure you are using RTS/CTS
flow control *ONLY*. Verify this in the Autodialer, if you use it, by
clicking on the "C" button to the right of the phone number you are
dialing.

Also, depending on your modem, it may not be set to use RTS/CTS (or
"hardware") flow control by default. Check the manual that came with your
modem for info on what AT command to send to the modem to enable this.

1786. Thanks to STiK/CAB/etc. developers!

Newsgroup: comp.sys.atari.st
Date: 1996-08-02 00:00:00 UTC
From: Doug Kendall <dkendall@facstaff.wisc.edu>
Message-ID: <32023D12.3CA6@facstaff.wisc.edu>
Source record: 140842

I know that most messages to the newsgroup deal with problems and questions about an inability to get things to work right. Too often, we don't post about our successes (and those of Atari developers out there).

Well, I'm happy to report that at least one non-programming modem-challenged ST user is now able to browse the web with CAB with no apparent problems. It did take a little study of the STiK dial.scr (thanks Dan Ackerman!) to get logged into to the UW-Madison server, but once that happened, everything has worked fine. Telnet works, as does Antmail. I still need to try some of the other applications.

Furthermore, CAB works great. After reading the posts in c.s.a.s, I was prepared for problems, but basically there are none. Pages load fairly slowly (I am after all using a 2400 baud modem!), but they load fine and CAB seems to have no more trouble resolving hostnames than does Netscape under Windoze.

I think all those who have helped develop this package have done a fairly amazing job...which will probably lead to my buying a faster modem sometime soon (you knew there'd be a down side here somewhere). Who needs Intel or Windows '95? TOS and a Motorola 68000 will do just fine for a while longer!

Thanks to all.

That's correct - and I would suggest that each member of TAF send email to
support@io.org requesting that they carry the newsgroup. Most ISPs will do so
if they are asked - you might include a copy of the charter, so they can see
this isn't intended for piracy (and I have issued a couple of cancels, BTW).

From: Dan Phillips <xiting@worldnet.att.net>
Message-ID: <4ttmef$p0v@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 140855

Well, I finally took the plunge and tried STiK/CAB with Worldnet. Unsuccessfully, of course. I tried to confirm the log-in name and password ATT puts in their dialer file and couldn't get a manual connection, no how. I dialed in and got a response, but when I enter either our actual username or the encoded one the ATT dialer puts out, along with either our actual password or the ATT dialer encoded one, the server just comes back with "Name, password pair incorrect." The ATT help staff confirm that the encoded name and password should work, but they sure don't. Also, he said ATT only provides PPP.

Has anyone else tried Worldnet? And when can we get PPP support? I'd be willing to kick $10 toward a PPP version sight unseen, then shareware fee after. Nudge, nudge, wink, wink.

Help!

Dan

>
>That's about US$65-75 right now, I think; add about $10 for an IMO, and it comes
>up to less than $100, but it's still pretty close to the cost of MagiC. %^(

They are adverising MagiC5.0 for 149 DM. The major advantage of N.AES
against MagiC is IMHO that N.AES is fully MiNT/Mintnet compatible what
can't be said of MagiC. With N.AES I can use now CAB with a PPP connection.
Or writing a homepage with Everest and see the results immediately
with Cab.
>Again, no good without a guaranteed-to-run setup.

Agree.
On my TT it runs quite well. There are some troubles for the moment
but that has probably more to do with my lack of knowless than with the
program itself.

wrote:

>Does anyone know where I can get a copy of GFA Basic Compiler from?
Do a Web search, there is a massive GFA site in Germany, with an
English mirror page, I happened on it by accident so did not keep the
url, but they are there,

>I'm writing some programmes for the Atari, I was going to send one to STF
>but where should I send them now. Any ideas.

This one got me as well,My current project is actually not a long
one, about six months, but the incentive died a little, at least there
was a hope of getting on a cover disk, or at least getting a review,
complete with colour screen shots, they where the best we could aim
for,
Now after 6, or maybe 12 months work, send the program to a pdl,
most will MAYBE send a 1 or 2 line note back stating they have
recieved it and thanks,
Thats it, all that work for a short reply from a pdl, and never hear
anything again? the better pdls will send you a letter praising the
program, and even replace your disk, but is that what we spend months
programming for? one letter from a pdl, and that is not an
exageration, that is all a pd programmer gets for his work,

Not everyone got something on a cover disk or reviewed, but the
incentive was there?,
Public Domain and Freeware titles, they just dont get any feedback,
no matter how good they are, how many people got a briliant game and
wrote to the author to tell them, an author who wasn't on line I
mean:), whers the incentive to do all that work making a game?,

OK to answer your questiom (at last!)
Diskmagazines, between them they get to a hell of a lot of people,
especially the people who are not on line, these people rely on
diskzines much the same way as we rely on newsgroups, You wont get
your software distributed (unless its small) but you will get it
reviewed if you send the editor a copy to review, there are plenty of
diskzine address on my web page,
What about ST APPS and ATARIPhlie, do they have some sort of policy
to only talk about serious or GEM software, ?

Choose pdls that do mail shots/catalogue updates etc to there
customers, these will usually be the bigger pdls,

Magazines? well there is of course the new magazine about to hit the
ATARI public, subscription only, but if you can get a mention in
there, or a review, then that will help circulate your software
enormasly (did i spell that right?), Current notes and ST Informer are
still going strong, I dont know if they review games (and I never will
if Danny doesn't get back to me?)

So there are a couple of ways, personally I am releasing my latest at
the ATARI show in Birmingham UK on the 28th Septemeber, hopefully it
will generate some interest,

>And there must be a way we can get STF back.

Not unless you have a big shovel :)

>COULD YOU VOTE!! SEE BELOW!!
>###Qa'Pla##

Thats one hell of a sig, hope its cold where you live, cause I have a
feeling you will get some flames with that :)

Cheers.............!ynoT

There is/was a CSLIP STiK under test but major internal changes to
code (futureproofing) means other things have to come first.

Well, I ftp'ed this game, and it looks like a fun one. However, I can't seem to even get past level 2. No matter what I do, I can't get past the lawn mower mechanoids. I've tried jumping at various times, and it just won't work.

What am I doing wrong? I don't have any energy in my gun and I can't blow up the door on the top floor.

>No offense to all the GFA coders out there, but I'd recommend HighSoft Basic

Rich started it with my BASIC is better than your's so...no offence
to GFA or Highsoft, but it really depends on what you want to do,
interface with GEM then you have the floor, Anything else then its
STOS, voted the BEST programming language in ST Formats last readers
votes, so cant be all bad?, and bar using GEM (what for?) then I would
put STOS head to head with ANY BASIC and come out winning :), its also
better supported than any other BASIC and upgraded more than any other
BASIC on the ATARI?

>instead. Version 2.x includes STe and Falcon extension, compiles to
>"cleaner" code, and the resulting code runs faster.

STOS has been available to use on the Falcon and for the Falcon for
some time now, I would like to see any other BASIC Access some of the
stuff STOS can on the Falcon,

DING DONG End of round one, and its a knockout , STOS Wins AGAIN !:)

Cheers.............!ynoT

>that 12000 baud is sufficent for the type internet use she'll do.

<Excess deleted>

I assume you meant 1200 and typed 12000? :^)

I use 14,400 and you're right it's a little slow for graphics. 12000 would be just a little slower. Without a dedicated server, 1200 with graphics would have me insane in no time. True enough, however, very basic text access though a server using VT100 should be tolerable.

What can I say, I'm a speed freak!

I would think the best way to go is to use the TT and an Atari formatter
to set the disk up as PC compatible, then the Mac should be able to read
it (as well as the TT). That's how I do the Flopticals, as I recall.

Very nice graphic.

It cracks me up that this guy can keep this going so long. My hat is of
to you, Idiot! I see postings referring to this pinhead or from this
pinhead, and bloop right over them. Once in a while the subject changes
and I call a message up, then go right back if I see his name.

My question is: If we're all smart enough to use Ataris, why haven't we
ignored this schmuck out of existance?

Dan

1823. Desktopper/Freekeys wanted!

Newsgroup: comp.sys.atari.st
Date: 1996-08-03 00:00:00 UTC
From: Dan Phillips <xiting@worldnet.att.net>
Message-ID: <4u0d5v$36d@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 140629

Is there any one out there willing to trade a Desktopper and Freekeys for any of the following?

Very nice external "pancake" SCSI case (mounting for 2 3-1/2" drives (one may be removeable media) and one 5-1/4" inch (may be removeable media). There is only one 50-pin centronics connector on the back because of the host adaptor) and installed AdSCSI with cable.

Floptical drive and 4 disks.

SC1224 monitor (one of the last made, 1989 production. Pristine except for velcro for typing clip, not included).

July and August ST Formats (I sell them new).

Screen Wonder (a la Screen Blaster, Blow Up. Has external clock for video circuit).

Actionsoft RAM expansion for Falcon (takes one 72-pin SIMM).

RAM Gizmo RAM expansion for Falcon (takes 4 30-pin SIMMs)

Cubase Audio Clock

Speed Resolution Card accelerator for Falcon (was removed from machine after installation)

Tons of games.

Just send e-mail if you have any interest,

Dan

Newsgroups: comp.sys.atari, demon.ip.support.atari

I use my works email account from home but I'd really love to modify the way NOS works.

Work is really the primary user of my email account and it's annoying when NOS Pop3 deletes the contents of my mailbox. Is there any way to modify this behaviour sop that NOS Pop3 leaves the contents intact only downloading new stuff?

ATB,
Karl.

```
The RGB Pinouts for the Philips CM8833-II monitor according to the manual
are:
Pin TTL RGB Analog RGB
1 Ground Ground
2 Ground Ground
3 Red Red
4 Green Green
5 Blue Blue
6 Intensity Fast blanking
7 Not Used Composite Sync.
8 H. Sync. H. Sync.
9 V. Sync. V. Sync.

Hope this helps, as it doesn't actually mean anything to me.

Yours,

--

David James

>
>Dan
>

I've formated the zipmedium (with scsi tools 6.10) DOS compatible (?).
According to the manuals I can't make partitions higher of 32 mb so I
partitionated the zip into three 31,9 mb partition with the following
setup: Byteswap on, 32 sectoren and 64 Kopfe (untranslated, I don't
know what this means).
The Mac refuse to read that kind of zip's.

>I mostly use my old copy of Atari Works for database activities. Came
>with my Falcon. Did you get a copy David?

No such luck,
As a UK purchaser I got a Minesweeper clone and CalApp and
that was it! When I wrote to Atari Quoting the scanty
advertising copy re Speedo etc I was told that my machines reg
no was a Bare Machine when they dispatched it and Silica
(Their distributors) had added the 65meg drive. So no SAM or
any of the other promised software would be forthcoming.

Silica offered nothing.

Atari Works was bundled with falcs most everywhere else in the
world but we didnt even get Speedo!

Hey Ho , dozent that remind you of the good old times when the Atari
PR machine was at its best :)

Cheers .....Dave G

I'd like to add my 2 cents to this. Anyone need only to look around
their office or home and will probably find some item that is connected
to Atari in some way. Atari in it's hey days churned out some of the
most innovative ideology, employees and influenced a generation of young
people.
You can read "Virtual Reality" by Rheingold (sp?). The book contains
numerous citation of Atari and how they influenced today's industry.

I am referring to his coverage of Atari management that he did not hold punches back. From what I heard he lost of lot of friends in the Atari community.

> IT's not really a cheap knock off of the MacOS, they were released at
> pretty much the same time and by Apple's own admission MacOS was
> copied from Xerox anyway so I don't think the theif should be calling
> the other theif a theif (thats assuming that TOS was the copy)!

Mac OS was not copied from Zerox. Apple derived a concept from what Zerox was working on. Apple did alot more of its own know how that when in the Mac OS. Plus Apple gave Zerox some stock. Tos was a knee kerk reaction that was put together bt Digital Research. I almost bought an ST back in 85 bought was seduced by the Amiga 1000.

>
> More speed *IS* a waste if it doesn't do more, which was my very point.

Speed does more. Speed allows you to run Quicktime 2.5 in all its glory. Cybordog, Netscape, multimedia apps and games love the speed. You can never get enough of speed. A $1500 Powerbase 180 puts the Pentiums to shame.

> I wouldn't ever expect it to catch up with the Mac never mind the PC.

> I am however confused about what you mean about me being arrogant to
> an industry, can you expand on this?

What is Atari' strength? Atari competed on the cheap according to Nintendo's defense lawyer. Atari purposely kept the ST line from being updated because the Tramiels just wanted to milk it for the profit.

>>We in the mac/pentium markets pay much less for power.
>
> Yes, *POTENTIAL* power, a fast chip doesn't mean a fast machine, for

> that you need tight and fast code and you mostly don't have that.

I really beg to differ. I have plenty of fast apps. WordPerfect, WriteNow and Nisus are high powered compact apps.

> Apart from Opendoc none of that really interests me much. Again the
> Mac/PC apps are good, and when running on the higher spec machines
> (costing much more than an ST) they are generally a fair bit better,

> style the could be an incredible amount better, far better than you
> really could possibly imagine.

I don't consider the new Powerbase as higher spec machines compared to the Powertower line. You make it sound like that the ST platform is the exclusive of tight code apps. This is farther from the truth. ClarisWorks, WriteNow, WordPerfect and many utilities break that myth that tight code only exists in the ST world. This is a fast paced industry. You either lead or get out of the way and frankly this what Atari did.

>>I agree that the ST is fine for email just don't try using Netscape.
>
> Netwho? Is that like CAB?

NetScape is many time more than cab.

>
I'm very happy for you; unfortunately, I'm one of those who are still
struggling with the nearly incomprehensible maze of configuration dead
ends and blind alleys. I'm not complaining, and I think the creators of
STiK/CAB deserve a round of applause, but my ISP hours are ticking away
unused, because I just can't quite get the thing browsing!

External 14.4 modems are selling for around $70 CDN in the Ottawa area, if
that's any incentive for you to make the jump. I find it's not too
significant with my FreeNet account (text only), but when and if I get to
web slinging, I'm sure 14.4 will be nearly essential. Read the above
posting from the poor fellow in Germany, where phone bills are eating him
alive.

Brains are something Atari users have, therefore they are not something a
Mac or PC user wants/needs.

As such, the behaviour of <ThatPerson> is understandable.

1852. POP3 mail via PPP on 1MB ST?

Newsgroup: comp.sys.atari.st
Date: 1996-08-03 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GHDTFBUQUp@tos.ak.planet.gen.nz>
Source record: 140658

I am looking for a program that will get mail and usenet via POP3 on a PPP connection. This needs to run on a minimal system - 1MB RAM and possibly a small hard disc drive.

I understand that Oasis will do this, is this true? What is this new program I have heard of called ICE?

Any suggestions are appreciated. In particular, I would like to hear from anyone using such a system currently - are there any problems, and can you tell me of anything I should know in setting it up?

>: If you use CAB, you should definately get hold of this!
>
>I got it.....how do i use it? there are no instructions!

if you are referring to the cache utiltity, the copy I got did come with instructions. Just place it in the same directory as CAB. Then choose "Cache Tool" from the File menu of CAB and there it is.

Just recently, it has been a crashing with a bus error for me. It worked fine to start with, but it appears that some WWW page which has since been put into the cache is affecting it. It comes up with "reading CACHE.CAB" or something similar, and the mouse cursor beach ball turns around for for about 5 seconds then it crashes. Any ideas?

Also, when I had my cache on a minix filesystem it was unable to operate correctly - it seems that it was expecting the letters to be upper case, but CAB was making them lower case. On a TOS FS this does not matter as it is not case sensitive. Any ways around this?

>And I STILL can't exit Oasis2 properly. The thing locks up and the mouse
>vanishes as soon as I click on QUIT.
>
>Any ideas, anyone?
>

The mouse pointer on my setup kept disappearing after running NOS
through VT52 under magic. I have installed a program in the programs
menu bar in ease called SHOWM. This program switches the mouse pointer
back on again. Good thing is you can select from the menu bar even
though you can't see the mouse pointer !

The program was part of a suite of programs in the file MAGICTOO.LZH
which I got from the uni-paderborn mirror at src.doc.ic.ac.uk

I think the path was something like

packages/atari/uni-paderborn/tools/magic/

hope this is useful :)

: >so she can get on the 'net? Local Isp's are clueless, they only have Mac
: >and PC software, and no local user groups available. Thanks for the help!
:
:
: First off, forget the SX212, it's 1200 bps. She can, however, use any
: standard PC external modem (Supra seems to be the most compatible). I
: can't recall if the ST is limited to 19,200 bps for sure, but I think it
: is. There is a small hardware mod for STs to take them to 28,800. Get a
: copy of HSMODA6 and you'll be on the way. Someone else will have to help
: on the 'net details, though, as I haven't gotten the urge to try to hook
: my Falcon up through ATT Worldnet.
:

I don't totaly agree with Dan here. If this friend of yours uses
a shell account for basic email/news/text only web browsing etc...
then 12000 baud is quite sufficent. It will be slow in downloading
binary files of course...but for normal text display such as reading
usenet posts via a unix or vms shell account, it's faster than anyone
I know can read! On a 520 ST, unless she's added a hard drive, and
some extra ram...this is the route I'd suggesst she take. Shell accounts
may cost a little more...but they give you storage space for all your
emails, articles, ftp archives, etc. In order to access a shell account
all one needs is a good terminal program that will do VT100. I'd also
suggest finding one that supports Zmodem.

Basicly...there are options to getting practical use from almost any
piece of computing hardware...however old it may be. She may find
that 12000 baud is sufficent for the type internet use she'll do.
If not...she can always get a faster modem...but till then, she's
online with what she has.

Now, I agree very much with Dan if she intends to use the TCP/IP type
tools with her Atari. Graphical Web browsing gets kind of slow even
on 28800 modems. For this venu of internet connection...I'd agree
with Dan, and also suggest she get a nice hard drive, and have at least
2 meg of RAM in her ST.

I personaly have the quipment on my Atari to get a decent TCP/IP
connection...but in all honesty...I mostly use my shell account.
It's very fast...easy to use...and it doesn't take up any extra
hard drive space on my end. I've also found that on my particular

set up...Zmodem via shell account well outperforms the current ftp options for the Atari. About the only time I use the TCP/IP tools with my Atari are when I want to browse the web graphicly. That's when a fast modem really is a plus.

Michael Clemmetsen <Michael.Clemmetsen@sunderland.ac.uk> writes:

>How many people are sick and tired of waiting for HiSoft to complete the
>translation of Papyrus 4?

I was wanting v4 but I was getting so desperate for a better word processor
that I struck a deal with them on Papyrus Gold 3 (which I will not disclose).

>They don't seem to be updating their web page and the last time I got an
>email back from them they said it would be ready in June. If they ever
>do complete it, the German version will probably be at version 6 :-(

Their web packages are long out of date because they have been very busy with
two new products (one is that MPEG thing for ST/Falcon/Amiga/etc and I don't
know the other). The said these other two NEW products took priority over
updates which is fair enough, since there is already Papyrus v3 out. Purely in
terms of business sense new products must take precedence otherwise they may
lose any potential market for the new product (delays in the Falcon's release
sure stuffed it's chances of being a mass market machine). Most current users
of Papyrus would accept the delays since they already have the product but
for people like you and me it certainly makes the decision more difficult. Try
and make a deal with them is all I can suggest.

>I've put off buying version 3 because the release of version 4 always
>seemed imminent and I did not want to be stung by upgrade costs a week
>after I'd forked out.

That worried me too, but see above. The release date according to Luke Stacy
is at least 2 to 3 months away at best for version 4.

>If HiSoft can't be bothered to complete this work, surely the guys at
>R.O.M. should look for another English distributor (Systems Solutions
>would be an obvious choice). All the time an English version does not
>exist R.O.M. is losing money, so it's in their interests to sort this
>out. So if anybody at R.O.M. reads this, I'm sure I'm not the only one
>who would like to hear your views on this matter (perhaps someone who
>knows an email contact for R.O.M. could forward this?).

Give them a chance, they certainly don't have the staff or resources to churn
out products like Microsoft should be able to (but look how late Win 95 was,
even corporate giants aren't immune to delays). We must remember that they
do also support products for the Amiga so there are two platforms for them
to look after. Like I said, try to make a deal with them over the upgrade.

Hisoft have a new e-mail address too. From memory it is support@hisoft.co.uk

j> running SERFX.20.PRG (from Medical Designs) before HSMODEM came along.

Fom the response from Rich and the responses I've had earlier, people either
have a problem that is fixed by it, no problem at all, or problems that
aren't fixed by either or both!

The simplest answer seems to be to use some combination of both until you
can't see any problems.

Of course, if you run Magic or some alternative OS you don't need a TOS
patch. Maybe that's the reason for variable results...

Too many variables ISTM...

guy@swampdog.demon.co.uk barked in COMP.SYS.ATARI.ST on 02 Aug 96:

g> Hi folks,
g>
g> Has anyone got the details on what to put into startup.nos to get a
g> pop3 account working? Guesswork doesn't seem to be getting me very
g> far. ;-)

I shouldn't think it would, no. <G>

Here's my POP3 section, less my password:

```
# startup file for KA9Q-NOS ST (DIS Version)

hostname starship

# ppp parameters
ppp sl0 pap user starship password
ppp sl0 lcp local mru 1500
ppp sl0 lcp remote mru 1500
ppp sl0 lcp local accm 0x000a0000
ppp sl0 lcp local pfc on
ppp sl0 lcp local acfc on
ppp sl0 ipcp local compress tcp 16 0
ppp sl0 lcp open active
ppp sl0 ipcp open active
ppp sl0 idle 300 exit

# Setup Simple Mail Transfer Protocol parameters
smtp timer 300
smtp wait 30
smtp trace 3
smtp maxclients 10
smtp beep on
smtp gateway 205.198.190.100
smtp verbose on
smtp delay 5
smtp mode queue
smtp batch off

# Setup the POP mail parameters
pop mailbox starship
pop mailhost [205.198.190.100] 3
pop userdata starship password
pop quiet off
pop timer 1800
```

At the end of the STARTUP.NOS, I also have:

ping terra

(terra is the hostname of my local dial-up server). This seems to make it much more reliable; I very rarely get a timeout after carrier, but without the ping, I get timed out about 800f the time.

f> data formatted into columns and needs to worry about widths in order
f> for the decimal points to line up. LDW was written with GDOS 1.1 in
f> mind, and seems to be incompatable with the newer vector routines in
Don't give up too soon, if you use a boot manager (XBoot is recommended) then
you can have multiple GDOS/Speedo/NVDI sets, with the ability to copy/rename
Assign.sys files from a folder to the root directory.

One of those assign.sys files could point to a folder wherein you have the
neccessary GDOS 1.1 print drivers and fonts.

Your print probs point to the wrong driver.

f> Meanwhile, my hoary old copy of OPUS neatly bypasses all this and
f> simply sends straight ascii to my printer which prints out using a

From: starship@3rdplanet.com
Message-ID: <553846484.99036.34.starship@3rdplanet.com>
Source record: 140807

Stuart@shaw1.demon.co.uk barked in COMP.SYS.ATARI.ST on 02 Aug 96:

S> Does anyone know where I can get a copy of GFA Basic Compiler from?

No offense to all the GFA coders out there, but I'd recommend HighSoft Basic instead. Version 2.x includes STe and Falcon extension, compiles to "cleaner" code, and the resulting code runs faster.

: >-o>enhanced joystick ports, in addition to the usual list of ST features.
:
: You would think that the "f" would be better than the "e"

Well, the STF came out first and the E means "enhanced" The letters ST
stand for Sixteen-ThirtyTwo for the type of processor. The TT series
were the True-ThirtyTwo hence that name. The numbers for the ST series
was 520 for a 512K machine and 1040 for the 1024K (one meg) machine. The
TT030 was a 68030 processor. They were very unorignal when it came to
names I thought until the Falcon.

: what is the price differance between the two?

Depends, probably the STe will cost more, mine was $300 while I got the
STf I have costed me $60. You pay for more future features, like a
possible 4 meg of RAM, etc...

1880. Re: English Papyrus 4 - When?

Newsgroup: comp.sys.atari.st
Date: 1996-08-04 00:00:00 UTC
From: fezzy <fezzy@iinet.net.au>
Message-ID: <01bb81a9$437f6860$f4193bcb@fezzy.iinet.net.au>
Source record: 140666

I wholly agree with what Michael has to say, in fact the two of the reasons I stayed with Atari ST's was promised Papyrus 4 & a WORKING WWW program (either Oasis or STiK/Cab), as of today none has arrived.

I can't see why Pap 4 hasn't been released as I'm sure it has been translated, maybe HiSoft has quite a few Pap3.6 left and don't want to be left with them on the shelf ??? who knows ???

The one thing I do know is, HiSoft have lost me. As having to use MS Word 6 at the office and now having a company suppled clone notebook, my poor old ST has been sold..... yes I have sold the love of my life, after being a avid ATARI owner & user for 12 years I have departed the Atari world into the next..... Let me tell you, the more I use the clones the more I like ATARI ST's ** BUT ** the machine is only as good as the software and if there is NO new, updated WORKING software for the machine what can you do ???

The clones have a LOT of problems like an unstable O/S (not to mention the HUGE overheads required to run it) and the fact they have been crippled to meet 'backwardly' compatibility ** BUT ** the have support and updated USABLE software which will keep it alive and well..

I am NOT knocking Atari ST's on the contrary, they are in my opinion (for what it's worth) still ahead of clone & Mac's.
I am knocking the software vendors.... Don't they see, if the are in the Atari market the should do there BEST to keep it alive & well. Because if people own and use ST's they are bound to buy software, then people like me won't get pissed off and for pry to the almighty clone....

There thats my 2 cents worth.....

It looks like it hs to do with the data transfer from your CD ROM. I copied the AVI from my CD ROM to my HD and the dark screen problem was solved. Also the AVI were in full color and Audio!!!

It is a great program. It would be even better if it worked in 256 to use it with CAB.

Raymond.

>wonderful graphics capabilities called a Falcon.

I regularly use MiNTNet to access the internet via a PPP account. And I regularly use CAB to read the WWW with graphics on. It never crashes. This is possible on your Falcon030 just the same as it is possible on my TT030.

It is a little complex to set up in places, but there is no need for an entirely new OS. All you need is to install MiNT (just copy it into your auto folder) and edit the configuration file to suit your system; then install MiNTNet by putting a couple of files into your C drive and a few more files in another directory and then install CAB by simply extracting the archive. You'll also need pppd - just extract that archive also. Then edit the configuration files for your system. Maybe it's not quite that simple in practice, but I am sure anyone can do it if they want to.

From: besieger@aol.com
Message-ID: <4u2i29$1ep@newsbf02.news.aol.com>
Source record: 140671

Hey, about 2 months ago, I bought a 1040STf with tons of stuff, but I realized I really don't have the space or time to deal with it all right now, so I'm selling it (for what I payed... price below.)

Here's what I got...
Atari 1040STf (that's the one with a built in floppy.)
What ever version of TOS it came with (1.02 I think)
An extra 800K floopy, capable of reading DOS
ATSpeed C16, DOS emulator (already installed)
Atari SC1224 color monitor
2 mice (1 Atari, 1 aftermarket)
Atari 5200-style joystick
Seikosha SP-1200A dot matrix printer
4 printer ribbons
All power cords and cables
Tons of floppies with shareware, public domain software, etc. (must be hundreds of floppies!)

I will sell the whole package for $100.00 plus shipping.

Greetings y'all,

Check you have the full english docs (the one with my address in them). The
problem you have results from unsupported (so far) video formats.

The problem with reading from CD is also known and described. if you copy from
CD and read from disk you will be OK. Guillaume is working on this as well as
some other suggestions for new formats.

If you need the full docs, let me know.

Regards,

Hi Theo!

Thank you for your mail.

I've heard that mint is very difficult to konfigure and I have noone,
who can help me here, because all use IBM-PC-MS-DOS.

I think it would be easier to me to change to MS-DOS than to install
MINT, but this is not what I want, because I'm still a ATARI "Freak"
without many technical knowlegdes about my computer.

Thanks

Gerd

1891. NeST WWW Pages Updated.

Newsgroup: comp.sys.atari.st
Date: 1996-08-04 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <32578831_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 140677

The NeST WWW pages have now been updated with reference to various comments made.

- More graphics (including ISMAPS).

- More Atari Links.

- More Psion Links.

- Red Headed girls finally sorted out.

- Screen shots of my Psion applications.

Again the URL is http://www.nest.demon.co.uk/

Okay, does the Mac allow partitioning of PC-compatible media in its software?
The Ataris have always been the best at accepting slightly off partitioning,
where the PC or Mac won't. For example, I set up a PC floppy on my old STe,
but the Mac couldn't read anything and wanted to format it. I tried to format
in a PC and it couldn't even format the disk. So I put it in the Mac and let
it format to PC and voila, all machines could read it. Really weird.

To transfer between an Atari and PC you can use 32meg partitions on
the Zip and it should be OK, I'm not sure if PC Xchange (or whatever
it's called) can read these partitions or not but give it a go.
Otherwise get MagicMac...

Hello there !
I read that you only get a black screen when you play AVI's and MOV's.
I think I can help you with that problem as I had it myself.
If you are running Extendos it won't show you any pictures, strange bug :-(
The only thing you can do is to copy the file to your harddisk and then
reboot without Extendos.
I hope this will help you.

Greetings Patrik

Be aware that most gophers don't know .lzh, .zoo, or .tos extensions from
.txt and will download these files types as 7-bit asci rendering them
unusable! It is OK for .zip and .arc though. Just something to keep in
mind if you decide to use gopher!

I've tried the 32 mb partitions with no luck. My brother has MagicMac
on his Mac but MagicMac doesn't recognise the zipdrive. That has
probably to do with a wrong configuration of MagicMac, I guess.
Unfortunately my brother is a complete dummy what concerns computers
and I haven't the time nor the willing to learn more about the Mac.
Maybe I should partitionate the zipmediums with the Mac like Dan
Phillips suggests (Thanks for that Dan).

When my TT030 started up today, the screen on its TTM195 was fuzzy, but viewable. After checking my eyes, I took it far enough apart to find out that the static focus adjustment did absolutely nothing. I will try to get a circuit diagram and get to the bottom of this, but while I am doing that, if anybody has met that particular demon before, please tell me what it turned out to be.

TIA

1918. Re: SinClap`s Humiliation

Newsgroup: comp.sys.atari.st
Date: 1996-08-04 00:00:00 UTC
From: mike@coconut.demon.co.uk
Message-ID: <839270792_OASIS_@coconut.demon.co.uk>
Source record: 140704

Hi all

Our present PITA, otherwise known as SinClap, has sent an email accusing me of threatening his life!

Obviously the man has no real comprehension of the English language, and failed to understand that when I talked about a permanent solution to the problem, I was talking about pulling the modem cable from its socket, and the cutting of the telephone cable, from where he spews his garbage, with a sharp blade. All this can be done legally by using the law and lawyers, hence the high cost of the gentlemen I would hire.

Sorry, Peter, you got it wrong again!

From now on I will not respond to any of his moronic postings and I urge others to do the same. Like all PITA, they do, eventually, go away, let's just speed the process up!

1919. MagiC network

Newsgroup: comp.sys.atari.st
Date: 1996-08-04 00:00:00 UTC
From: jake.goerzen@dinuba.com
Message-ID: <8C5C418.036300536C.uuout@dinuba.com>
Source record: 140705

I have a Falcon030 14mb RAM in a Wizztronics Rack. I also have a MegaST4. Both run MagiC 4.02/HD Driver 4.61/THING .59b/NVDI 3.02. I want to network them together via MIDI ports. Currently I have Medium Net running for 2 hours or so, only problem is I can't access my CDrom (drive P) on the megaST4 with the Falcon. (-46: invalid drive) The Mega4 has ExtendDOS 2.4a installed, the Falcon does not. Is it possible to access the CDrom throught the network?
MagiC is great, one of my favorite software purchases. I wonder if ASH plans to add built-in network ability in future version, and a TCP/IP stack.

jake.goerzen@dinuba.com

1920. What FTP site for new software?

Newsgroup: comp.sys.atari.st
Date: 1996-08-04 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GHETBEVGUp@tos.ak.planet.gen.nz>
Source record: 140706

While HENSA was still being maintained by Denesh Bhabuta, this seemed to be the place where all the latest PD/Shareware/Freeware software was available from.

Now that HENSA is not being updated anymore, however, which FTP site is it where most of the new software goes?

a.a.u.e. never seems to have anything new on it. Cnam does not seem to have had anything new recently either. And there are so many other ftp sites, mainly in Germany, that it is impossible to check them all regularly. I figure there must be one or two sites where most people put their new software.

Any suggestions are appreciated.

I do not subscribe to Worldnet (it does not exist over here in New Zealand)
but I do use PPP every day, and it works perfectly. I do this with MiNTNet.

CAB seems to run very well with MiNTNet, and I don't get all these problems
of crashes and things that I keep hearing of from STiK users. This is not
to say that STiK is no good, but if you want PPP then MiNTNet is the solution.
of course MiNTNet can be used for SLIP too.

Source record: 140562

stosser@airtime.co.uk barked in COMP.SYS.ATARI.ST on 05 Aug 96:

s> Hehehehe this is getting good :)

Very true. ;^)

s> Hang about, STOP right there, my current project, if run on a
s> STe,fully supports DMA and will knock your socks off when run on a
s> falcon, I know because we already tried it, both STe and Falcon
s> versions have full dma support throughout the game, on interupt :)

Sounds good! (No pun intended!)

s> With STOS I can play full tracker mods up to 50whatsits, on a ste,
s> god knows what on a falcon, full wav.sam.spl and many other samples
s> sound,mods up to 16fingy on a fm, many many other sound files as well,

Does it auto-detect the hardware? That would be great!

s> As for STOS being easier?, you are kiddin, 4 am, another sleepless
s> night, and still that routine wont work....come tell me then that STOS
s> is easy?

Well, for 16-color (or more!) graphics, I'd rather write in STOS than, say, C
or Asm.

>> "serious" stuff, and STOS simply is too hard to deal with when using
>> command lines or GEM windows. It's still better than GFA for everything
>> else, however.
>>
>> Query: Can STOS be used to write a desk accessory? Both GFA and HighSoft
s> can. I don't know if STOS can, but I'd like to know.
s>
s> Sure you already know Rich, I already pointed out that STOS and GEM
s> dont mix, people want to use that as a stick against STOS, but GEM not
s> being an option, is not a problem, not everyone wants to make
s> something with GEM for crying out loud, some people dont like GEM?, I
s> already stated and will state again, "barring GEM , STOS will better
s> any BASIC around, If you want GEM then Highsoft in my opinion is best,
s> But if GEM is not a need, then STOS will easilly beat anything
s> currently available"

Can't argue that point (except the inability, soon to be overcome, I think)
to read a command line. That's a real strong need for lots of programs.

s> To say its easy to program is a laugh, yes it is easy to make
s> something thats slow jerky unresponsive and generally crap, but not so

That's true for most any Basic (and, while not as easy, still relatively true for Asm, C, Pascal, Modula-2, Ada, ad nauseum).

s> easy if you want to make something that hacks it in todays world of
s> computers, STOS is up to that task, but the downfall of STOS has
s> allways been that it is just as easy to make something in about half a
s> day and say, hey look what I made!, hmmmm :)

I believe I told you about the demo I saw last month. I hope to get a copy this month to post on variosu ftp sites. It's BEAUTIFUL! And it's all in STOS.

s> All above comments written in the best of moods, no mallice, no
s> argumentive intentions, just a happy debate between friends :)

No offense - I think I would work in STOS for anything that didn't need command line/GEM capability, if I had a compiler for it. Never could afford both HighSoft and STOS compilers. <SIGH>

Kerry Haxton wrote this to All about Falcon Speed/Hd partitions:
KH> I have recently purchased a new harddrive for my Atari Falcon
KH> system. It's a 1.7Gb IBM-DJAA-31700 (IDE) .

Hi Kerry,
I've tried some different EIDE-drives, but haven't been able to get them to work properly if they are bigger than 1.2GB.
It depends on both the hardware and the driver software. I've been told by someone that the Falcon wouldn't allow IDE-HD's of more than 1GB. If I use SCSI-tools/HuSHI this seems to be true, but HDDriver can use my Quantum fireball 1280MB without any problems (still keeping my fingers crossed). With bigger HD's, it simply hasn't worked :(I quit using AHDI/HDX a long time ago, so I don't know how they react to such HD's.
When it comes to SCSI, it's a whole different story and my 2.1GB runs perfectly...

Best regards,

Claes

Hi UK readers, I'm trying to get rid of a bunch of Atari mags (STF
1990-95, ST User 90-94, ST Review 92-94)
Not every issue is there, in total there must be approx 80 mags, and a
load of cover disks as well. I also have a MicroDeal VideoMaster, a
Cameron HandyScanner (mono hand scanner, boxed as new) and a Jaguar Joypad
(works on Falcon)
Falcon users - I have 4T-FX hard disk recording package, boxed, dongle etc.
No reasonable offer refused, email me if interested.
Bye for now,

Rich

This is a copy ofa letter I sent to COMPO and TOAD, but have had no reply to.. Anyone out there got any ideas.

I have recently purchased a new harddrive for my Atari Falcon system. It's a 1.7Gb IBM-DJAA-31700 (IDE) .

On my previous drive I had Falcon Speed all set up to boot from one of the partitions, but I can't seem to get this new drive to work. I'm able to use the drive under DOS6.2/Windows 3.1.1 with no problems (using ADD_PART) . Using the DOS format command to prepare the partition for the system works fine, but when I do a SYS command or a FORMAT /s the system hangs. Looking at the drive after rebooting under TOS I can see that the boot sector appears to be in place (Using DISKDR), and some of the hidden dos files are in place, but the system will not boot dos.

The IBM drive is partitioned with a 6MB as C, and a 16MB as D (Dos Boot), another 32mb, a 100mb , then some 350mbs

I have FALCONSPEED 6.2.

Is there something I should be doing (I hope so) so I can make it all work?

:

I'm assumeing you mean you'd like to emulate an ST on a PC computer.

AS far as I know, there are 3 choices.

You can download STonix for free...
STonix requires that you run Linux however.

Gemulator is a Hardware/Software package that allows you
to run ST software under Windows. This option
uses one of your ISA slots and adds provisions to
install True Atari TOS ROMS into your PC.

MagiC PC is a Software package based on a really new and streamlined
pre-emtive multi-tasking TOS/AES. This route does not
require you to install an ISA card or purchace TOS on ROM.
MagiC PC runs under Windows.

I can not say which is the better choice at present, as I've never
seen or tried any of the three in action. Both claim to be able
to handle the various assortments of Video Modes, Storage Formats
and Mediums, printers, etc...that most PC's are equipped with.

If you'd like to see a bit of info on Gemulator and MagiC PC
check out http://www.toad.net on the world wide web.

hello

i read a posting 2 weeks ago by Richard Wegner <richardw@dma.org> which
said :

>Hi! I just recently got the file that gives the description for
>upgrading the ST/STe serial port to handle upto 38800 bps.

and i was wondering if anybody could give me the reference of that
file since he couldn't. BTW is that 38800 or 28800 ?? AFAIK 38.8 is by no means
a standard baudrate...

thanx

fab.

Request: Please create alt.binaries.atari.st
Use: For Atari users to send out public domain / shareware binaries,
programming efforts,
help other users with binary setup for example
Internet connection software (PPP and the like)
unmoderated, due to the lack of response from our previous moderator

This group is not to be used for the distribution of commercial software,
registration keys, etc.

SPAM, Advertisments etc, are undesirable, however tend to be impossible
to stop, but I believe that the general Atari community will not mind the
posting of such material, due to the fact that we would be able to get
and send binaries.

I believe that there some Atari binaries newsgroups floating around,
however not many people can get them, and the traffic doesn't get
distributed.

Please, comments, suggestions, alterations, and most of all support for
such a group are very welcome here!

Installing MiNT is a lot easier than doing anything with DOS. It's just copying MiNT.PRG into the Auto folder. MiNTNet is a bit trickier, bit still a lot easier than installing TCP/IP Packages for DOS (IMO). It is also mainly coppying Files, but some of them have to be edited to get an Internet connection running. There is a good WWW Page that gives an easy to understand introduction into installing MiNT:

http://www.gti.net/azog/mint-docs.html

Hope this will help you.

The demise of Atari should be a good lesson for anyone in the industry. Look at what they had in the begining, Top name in the industry, fastest growing company. Stock went from $11.25 a share to over $35.00 in a short period of time, split and started all over again. Then they were sold, new owners came in and did what they thought was best.??

But they forgot one thing, they had over 1,000,000 customers of a product put out by the previous owners. These customers were loyal and dedicated. The new Atari went on a campaign to produce new products, at each show or exibit the customer representatives Atari, would do their best to Piss off the old dedicated members of the Atari comunity. Atari expected this group of now totaly irate customers, to buy their new product. As you look back you can see just how many supported the New Attitude, developed by Atari, the demise of Atari has nothing to do with competition, it was self distruction plain and simple.

If you have 1,000,000 plus customers you definately have a market to draw from. You or any Company with any sense will support those customers, kiss up somewhat (or a LOT!) to gain thier confidence in the new product. Backward compatibility has never put a company in the RED...But to blatenly tell your customer base to go to hell in so many words through Customer Service Represenatives sure will put any company out of business.

At least with the merger if it is approved the stock holders have a small chance of recouping, at least we know hard drives are in demand.

> Mac. Now I see someone ran it on a Falcon. So I'm confused..what is it?

MagiC is an alternative Operating System for Atari Computers. It does
not run on Medusa Computers as it just can handle up to 030er
Processors. Magic is said to be very fast. It Provides Multitasking, and
a special singletasking mode for combatibility reasons.

The Atari Emulator for the mac is called MagiCMac. There is also a
Programm called MagiCPC that does tha same for Windows95. Both of them
are reincarnations of Magic on other Platforms.

The Problem of MagiC is that is not very much combatible with the
Standard in the Atari Market: MiNT. They are working on it. MagiC does
provide nice features, but on the other side MiNT has other nice
features and is the standard.

The other bad thing about MagiC compared to MiNT is that it is not free.
There are even free AES Clones for MiNT in beta testing. The Comertial
N.AES (for MiNT) still is cheaper than MagiC. All in all MagiC is in my
opinnion a proprietary solution that is more expensive than the
Standard, but people are still using Windows though they can have the
possix combatible Linux for free...

f> I wholly agree with what Michael has to say, in fact the two of the
f> reasons I stayed with Atari ST's was promised Papyrus 4 & a WORKING WWW
f> program (either Oasis or STiK/Cab), as of today none has arrived.

Both have arrived. I use the NOS portion of Oasis 1.35 four times/day, unattended, to pull down mail and news (and send whatever is waiting to go out) so that UUCP-ST can gate them into AtariNet, and to get the NeST packets from Paul Baker in the UK. It works fine. I have used Oasis itself briefly - I wanted to see how it works, and it seems pretty solid, albeit missing some features that would be nice to have, like proper threading.

WWW 1.31 works just fine on my Mega STe and both the bog-standard 1040ST and the 2 meg RAM 1040ST here.

They have arrived. If you can't get them to work, you should ask for help.

Dean, the only TOS computers still in production are the C-Lab Falcon, the Medusa and Hades, and I think there's another high-end workstation.

If you can find a Mega STe, expect to pay around $400 or more. Most of us who have one aren't willing to part with it, however.

1959. MiNT/MinixFS prob.

Newsgroup: comp.sys.atari.st
Date: 1996-08-05 00:00:00 UTC
From: Ivan Dimbleby <ied2@recursiv.demon.co.uk>
Message-ID: <839269397snz@recursiv.demon.co.uk>
Source record: 140737
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I hope somebody can help!

I'm experimenting with MiNT and MinixFS for the first time. My
aim is to be able to use a csh-like shell (with job control) with
long mixed-case filenames. I do not need or want the ability to multitask
GEM programs.

I have successfully formatted my D: partition using MINIT to have a
Minix version 2 filesystem (minit -V -P -n 2 d:) and have checked its
integrity with the FSCK utility. The reason I went for a version 2
filesystem was because the partition is 128 meg and a version 1
filesystem isn't possible on a partition of that size.

MiNT runs fine, I can put jobs into the background with TCSH etc etc
BUT when I try to create files on partition D: that are more than the
standard 8:3 DOS format, their names get truncated! I have tried a few
shells now with the same results.

What am I doing wrong? The MiNT version is 1.12 and the MinixFS version
is (I think!) 6.0 pl11, if that helps. And I'm using an Atari Falcon030
(14 meg RAM, 540 meg HD, TOS 4.04).

Please reply by email if you're a MiNT/MinixFS guru & think you may be
able to help. :-)

Thanks in advance,

-Ivan

I beleive MiNTNet supports CSLIP. This would solve your problems. When you
run slattach there is an option of CSLIP, so I guess it must work.

: never made it here to Nyx.

I see part 4 of 4 of "WRDSQR" (whatever it is) and both parts of the
Falcon DSP MPEG player. And I'm answering this thread from a.b.a. (even
though text files are contrary to the purpose of the group, I think an
exception can be made until we are sure it is propogating properly).

So it seems like it is picking up now, for me anyway.

>>>No offense to all the GFA coders out there, but I'd recommend HighSoft Basic
>>
>> Rich started it with my BASIC is better than your's so...no offence
>>to GFA or Highsoft, but it really depends on what you want to do,
>>interface with GEM then you have the floor, Anything else then its
>>STOS, voted the BEST programming language in ST Formats last readers

Hehehehe this is getting good :)

>Writing anything that requires lots of graphics and sound support (other than
>DMA/DPS sound), STOS is probably easier, yes. But most of what I write is

Hang about, STOP right there, my current project, if run on a
STe,fully supports DMA and will knock your socks off when run on a
falcon, I know because we already tried it, both STe and Falcon
versions have full dma support throughout the game, on interupt :)

With STOS I can play full tracker mods up to 50whatsits, on a ste,
god knows what on a falcon, full wav.sam.spl and many other samples
sound,mods up to 16fingy on a fm, many many other sound files as well,

As for STOS being easier?, you are kiddin, 4 am, another sleepless
night, and still that routine wont work....come tell me then that STOS
is easy?

>"serious" stuff, and STOS simply is too hard to deal with when using command
>lines or GEM windows. It's still better than GFA for everything else, however.
>
>Query: Can STOS be used to write a desk accessory? Both GFA and HighSoft can.
>I don't know if STOS can, but I'd like to know.

Sure you already know Rich, I already pointed out that STOS and GEM
dont mix, people want to use that as a stick against STOS, but GEM not
being an option, is not a problem, not everyone wants to make
something with GEM for crying out loud, some people dont like GEM?, I
already stated and will state again, "barring GEM , STOS will better
any BASIC around, If you want GEM then Highsoft in my opinion is best,
But if GEM is not a need, then STOS will easilly beat anything
currently available"
To say its easy to program is a laugh, yes it is easy to make
something thats slow jerky unresponsive and generally crap, but not so
easy if you want to make something that hacks it in todays world of
computers, STOS is up to that task, but the downfall of STOS has
allways been that it is just as easy to make something in about half a
day and say, hey look what I made!, hmmmm :)

All above comments written in the best of moods, no mallice, no argumentive intentions, just a happy debate between friends :)

Cheers.............!ynoT

Hi All,
Can anyone tell the following e-mail addresses of

Guido Vollbeding who wrote the MPEGDSP.TTP program for the Falcon
Martin Griffiths (Griff of Electronic Images) who wrote PLAYMPEG.TOS
for the Falcon.

If they do not have e-mail addresses what are their current snail mail
ones?

Please reply by e-mail to firebird@wildnet.co.uk

Thanks in advance for any information
Graham

It's a floor wax, no it's a desert topping..

MagiC started as an alternative operating system for ST's and TT's.. it's fast and written in assembler, in addition to being a pre-emptive multitasking system.

Then they added Falcon support..

Then they added Mac support so you can run Atari programs on the Mac..

Then they added PC support so you can run Atari programs on the PC..

I read a while back that they were thinking of doing it the other way also, so you could run Mac stuff on an Atari, but I dont know if that's ever going to happen.

AtariCorp did a very nice job of self destructing by f**king over customers with breathtaking efficiency. They seemed to be primarily concerned with the stock market, as opposed to the computer market. How JTS conducts itself will be a interesting thing to watch. Have they actually shipped product yet? Or is this going to be another "Hype the VapourWare, pump the stock price, sell sell sell, then when the stock drops, buy it back and do it all over again" scam?

: Request: Please create alt.binaries.atari.st

Although it is not available everywhere, alt.binaries.atari already exists expressly for the purposes you outlined in your post.
alt.binaries.atari.st is unlike to propogate anywhere that a.b.a doesn't, and if the issue is 8-bit traffic in that newsgroup, the 8-bitters have their own alt.binaries group already. I think we could probably reach agreement with them not to post to each other's binaries groups. A more useful effort would be to create an Atari binaries group in the comp heirarchy, using a.b.a until said group can be created.
comp.binaries.atari (or comp.banries.atari.st and comp.binaries.atari.8 if your prefer) would be accessible by more people.

1978. MiNT & MiNTNet Questions

Newsgroup: comp.sys.atari.st
Date: 1996-08-05 00:00:00 UTC
From: jdaddin@dfw.dfw.net
Message-ID: <4u54k0$19b@fnord.dfw.net>
Source record: 140756

I've been working on getting MiNT & MiNTNet up and running so I can use its protocol capabilities since I can't get CAB to cooperate. I recently downloaded and installed the newest version of the TAF MiNT package that I could locate. However, the versions in the package are still a little old. It has version 1.12 of MiNT and version .70 of MiNTNet.

What I am wondering is, 1: What is the newest version of MiNT available?
2: What must I do to upgrade the existing versions
if the two I have installed?
and 3: What needs to be done to set it up for the
various protocols? I have a dynamically
allocated SLIP right now but will probably
switch to PPP soon if I can get it going.

Any help with answering any of these questions would be much appreciated!

Jared

TM> Actually, the regular ST has a 512-color palette (remember Spectrum
TM> 512? :)

While all that's true, the fact that Spectrum 512 existed doesn't relate.
Both machines only allow 16 colours on screen at the same time - the colour
pallette only indicates what gradation you can get between the colours.

The likes of Spectrum 512 and Quantum Paint allowed extra colours on screen,
but when you consider that Doug Little's Photochrome claimed to get 19200
colours onto an STe screen at one time, you'll see that the capabilities of
the software aren't related to the hardware specs.

1990. Re: MiNT & MiNTNet Questions

Newsgroup: comp.sys.atari.st
Date: 1996-08-06 00:00:00 UTC
From: thopman@uoguelph.ca
Message-ID: <4u899j$7de@ccshst05.uoguelph.ca>
Source record: 140518

Jared Addington (jdaddin@dfw.dfw.net) wrote:
: I've been working on getting MiNT & MiNTNet up and running so I can use
: its protocol capabilities since I can't get CAB to cooperate. I recently
: downloaded and installed the newest version of the TAF MiNT package that I
: could locate. However, the versions in the package are still a little
: old. It has version 1.12 of MiNT and version .70 of MiNTNet.

: What I am wondering is, 1: What is the newest version of MiNT available?
The newest version from Atari (and also the last) is version 1.12, the
version you have. However, several kind MintNuts have patched 1.12 so
much that it has been renamed to FreeMint, and is now at version 1.12.5.
You should be able to find it at any half-decent FTP site. The latest
version of MintNet is 0.90, and you should be able to find it at the same
place.
: 2: What must I do to upgrade the existing versions
: if the two I have installed?
Very little. Replace /c/auto/mint(np).prg, and replace the MintNet
drivers (socket.xdd and slip.xif, IIRC) in /c/mint with the newer
versions, and you should be set.
: and 3: What needs to be done to set it up for the
: various protocols? I have a dynamically
: allocated SLIP right now but will probably
: switch to PPP soon if I can get it going.
Hmmm. I'm not sure what's involved in going from SLIP to PPP, since I
went with PPP right away. You'll need the pppd-2.12 package, which again,
should be on any good ftp site. It should be a matter of writing a chat
script (I can send you mine if you wish).
: Any help with answering any of these questions would be much appreciated!
No problem!

c> [cut]
c> MagiC is an alternative Operating System for Atari Computers. It does
c> not run on Medusa Computers as it just can handle up to 030er
c> Processors. Magic is said to be very fast. It Provides Multitasking,
c> and a special singletasking mode for combatibility reasons.

Both pre-emptive and co-operative multitasking, yes.

c> The Problem of MagiC is that is not very much combatible with the
c> Standard in the Atari Market: MiNT. They are working on it. MagiC does
c> provide nice features, but on the other side MiNT has other nice
c> features and is the standard.

That's an interesting comment. I saw many complaints about this here in the
UK, but the response we received was that Magic is not MiNT and so it doesn't
try to be compatible with it if Magic has found a better method (in the
opinion of the authors). The comment that MiNT is the standard on the Atari
platform was countered with the fact that Magic was started (though not
released) prior to MiNT.

Has this now changed or is it speculation?

Originated on the MegaST (I owned one, before upgrading to a TT), then the STE and finally the MegaSTE.

The Falcon has a "blitter", but, as I am unfamiliar with said machine, I shall not comment.

Yes it is :)

I have a 1040stfm with a ICD Link II Scsi interface. The SCSI Zip
drive is on the end of a SCSI Lead which goes to my hard disk.
You have to provide a +5v power supply to the Zip through one of the
SCSI connections. I think this is needed for the SCSI termination. I
took a +5V supply from my hard disk power supply using the lead
provided by Hisoft with the drive. (25 Way to 9 way).

The Zip drive works great and swapping disks isn't a problem - as long
as you relog them :)

>users web page have a link to go there. It works, but you need the
>iwad not pwad. Generally the iwad are bigger. Hope this help.

Perhaps I should clear up a couple of things here:

'The Dragon Reborn' is the name of my WWW/ftp site for reasons having
to do with the machine name and the greatest fantasy book series yet.

On 'The Dragon Reborn' you'll find the main BAD MOOD Web page and ftp
archive. The mailing lists are also run from there.

BAD MOOD is the name of an internet project to create a WAD compatible
game for the Atari Falcon. The engine/game goes under the same name.

The latest BAD MOOD versions (we're up to 2.14alpha now) can use pwads if
you also have an iwad. Some older versions can run with just an iwad.

The BAD MOOD engine is based on a PC program called DVIEW by Jake Hill,
which was first ported and improved by me.
The C++/C code has long been abandoned for '030 and DSP assembly code and
the engine has been very much improved and extended over the original.
Most (just about all) work on the current 3D engine has been done by
Douglas Little, one of the people behind APEX.

If anyone wants to know more about the project, please visit the Web site.
There are links to a couple of other pages that have a bit more to say
and there's information about how to join the main mailing list.

Well, you can get a SCSI for the Atari and a parallel port EZ135 for the PC and the CARTRIDGES are still cross platform compatible. I do it all the time. Only thing is ... format and partition on the PC (not on the Atari .. I use ICD PRO utilities but can't get it to write compatible with a PC during format/partition).
On the PC, you can partition an EZ135 cartridge into two partitions (64 mb and a 63.9 mb second one) and my TT will read/write to it. Anything over 64 mb will not be recognized (TOS 3.06 w/ICD Pro Utilities). I usually partition each cartridge into 5 partitions .. 30, 30, 30, 30, 7.7 (that is in Mb). That way I can read all the way down to TOS 1.04.

George Iken
Houston Atari Computer Enthusiasts
..... oh by the way .. my first two EZ135's were at full price, when the price went down, I got two more. I'd have to say .. I kind of like the durn things

2014. Re: MagiC? What is it?

Newsgroup: comp.sys.atari.st
Date: 1996-08-06 00:00:00 UTC
From: ha-user@ux-01.bg.bib.de
Message-ID: <4u7bue$4e9@ux-01.bg.bib.de>
Source record: 140576

Hi,

Christof Donat (cdonat@in.tu-clausthal.de) wrote:
: hummus@pipeline.com wrote:

: > Pardon the ignorance...but what is MagiC? I know it's some kind of
: > alternative operating system, but I thought it was an ST emulator for the
: > Mac. Now I see someone ran it on a Falcon. So I'm confused..what is it?

: MagiC is an alternative Operating System for Atari Computers. It does
: not run on Medusa Computers as it just can handle up to 030er
: Processors. Magic is said to be very fast. It Provides Multitasking, and
: a special singletasking mode for combatibility reasons.

Which is very compatible indeed... although IMHO MagiC crashes fewer
non-clean applications than MiNT-based systems do in the first place.
I don't need the single mode at all.

: The Atari Emulator for the mac is called MagiCMac. There is also a
: Programm called MagiCPC that does tha same for Windows95. Both of them
: are reincarnations of Magic on other Platforms.

Both of them are software Atari emulators that can boot a modified MagiC.

: The Problem of MagiC is that is not very much combatible with the
: Standard in the Atari Market: MiNT. They are working on it. MagiC does
: provide nice features, but on the other side MiNT has other nice
: features and is the standard.

Well, I'd say that which is the standard isn't all that clear. OK,
MiNT was here first, granted; but everyone I know personally uses
MagiC, no MiNT-based system. I think MagiC is the more important
one. And the compatibility issues don't really matter on the
application level anyway: most application that work under MagiC
work under MiNT/N.AES/multiTOS anyway.

: The other bad thing about MagiC compared to MiNT is that it is not free.
: There are even free AES Clones for MiNT in beta testing. The Comertial
: N.AES (for MiNT) still is cheaper than MagiC.

OK, you've got a point there. But MagiC is quite inexpensive,
IMHO. For what it does.

: All in all MagiC is in my
: opinnion a proprietary solution that is more expensive than the
: Standard, but people are still using Windows though they can have the
: possix combatible Linux for free...

That's not quite a fair comparison. MagiC and MiNT based systems are
95% compatible from the user's point of view. Linux and Windoze
are 99% incompatible. And, what's more, MagiC is lightning fast,
whereas MiNT based systems are (IMHO) unbearably slow on a 8 MHz
ST. I saw both MultiTOS and N.AES on a MegaSTE, and both of them
appeared to me as extremely slow (N.AES to a lesser extent), whereas
a MagiC system actually feels *faster* than TOS on the same hardware.
I think that's quite important!

If I could afford a TT, or a faster machine, I'd give N.AES a second
look; but on anything ST-ish I'd rather have plain TOS than any
MiNT-based multitasking. But since there's MagiC, I'm happy with
the MegaSTE.

Disclaimer: I have nothing to do with the Behnes or Application Systems,
I am just a content MagiC user.

Yours,
Erik.

Hallvard Tangeraas (hallvart@sn.no) quoted some anonymous poster:
> >4096-color palette (vs. 256 on the ST),
^^^

The pre-STE machines (ST, STM, STF, STFM, Mega) had a 512 colour palette.
Eight levels each of red, green, blue makes 8x8x8 = 512.

The STE increased this to 16 levels each. 16x16x16=4096. (this carried
over to the Mega STE, and TT)

2017. STuff for Sale (Lots 'o things)

Newsgroup: comp.sys.atari.st
Date: 1996-08-06 00:00:00 UTC
From: troyc@bnr.ca
Message-ID: <4u6cga$n7c@batph8.bnr.ca>
Source record: 140579

I have an Atari TT030 for Sale:
Motorola 32MHz 68030 + coprocessor
8 Megs Ram Total (4/4)
40 Meg Quantum Harddrive
1.44 Meg Floppy
TOS 3.06
External DD drive
Great TT style Keyboard + Atari Mouse

ST Users upgrading take note: This machine requires a VGA monitor.

$500, shipping included.

** Special Deal **
For $100 more, I will replace the 40 Meg hard drive with a 720 Meg
Quantum Drive. This hard drive has both Atari software plus a full
Linux Installation (Linux 1.2.13pl10 ELF + X windows).

Misc for sale, prices DO NOT include shipping. Make offers, everything
must go because I don't want to lug it when I move:
Tandy 102 Laptop Computer $100
I actually saw a foreign journalist for the Olympics using
one of these on the News the other night! Includes power
cable, carrying case, modem cable, all manuals.
Atari SC1224 Monitor $50
Spectre GCR + disks $75 ($50 with purchase of TT)
PC Ditto II (hardware + disks) $30
Everex 2400 Baud Modem $15
Avatex 1200 Baud Modem $10
Original Atari Mouse $10
sQuick Atari/Amiga Mouse $10
Slick Stik Joysticks $10 for both
Original Atari Trak-ball $20
This has the much sought after "left button" modification
which simulates a left click when pressed. This is an Atari
original.
TOS 2.05 $10

This is a repost since the last time I posted from the wrong account.

> >> "serious" stuff, and STOS simply is too hard to deal with when using
> >> command lines or GEM windows. It's still better than GFA for everything
> >> else, however.

As I say, who needs GEM or GEM windows if making a game, anyway
writing your own windows routines are more fun surely, I still dont
get this fixation with GEM everyone has, dont see why its needed, to
interact with other programs then yes, but for a stand alone program,?

>Can't argue that point (except the inability, soon to be overcome, I think)
>to read a command line. That's a real strong need for lots of programs.

Only for interacting with other programs as we know <smile> and I
freely admit that my intended STOS program needed a small program
written in your hisoft to make it interact, but that only goes to back
up my claim, for GEM then higsoft, but ANYTHING else then STOS and
there is a heck of a lot of "anything else":), I think we both agree
on this,

> s> All above comments written in the best of moods, no mallice, no
> s> argumentive intentions, just a happy debate between friends :)
>
>No offense - I think I would work in STOS for anything that didn't need

>command line/GEM capability, if I had a compiler for it. Never could afford
>both HighSoft and STOS compilers. <SIGH>

i think I was one of the few who actually bought the STOS compiler,
not long after and the bloody thing was given away on a cover disk? st
user I think?...that was a fully working version, suprised you dident
get that?

It is unbelievable the amount of people who write to me asking where
they can get a copy of the compiler from, Mandarin long left the atari
and refuse to let go of stos, but also refuse to produce it or give it
for a cover disk, they just want to sit on it?, no one sells it,
anywhere that did have old copies in stock have either left the atari
or sold out so its physicly impossible to buy it anywhere, but it is
still piracy to copy it for someone?, the version that was given away
on a coverdisk for thousands of people free, that magazine has folded,
but its probably still piracy to copy that, although i have my doubts
about copying cover disks being piracy, i guess its a whole can of
worms.. I think I will send mandarin some emails asking for permission
to copy them at none profit...worth a try?, probably not, but you dont
get if you dont ask......now where will i find there email i wonder???

Cheers.............!ynoT

briefly
> - I wanted to see how it works, and it seems pretty solid, albeit missing
> some features that would be nice to have, like proper threading.

I really should have been more specific... a working WWW connection using
either PPP or CSLIP, as these are the protocols both of my ISP provide me
with....
>

> WWW 1.31 works just fine on my Mega STe and both the bog-standard 1040ST
and
> the 2 meg RAM 1040ST here.
>
> They have arrived. If you can't get them to work, you should ask for
help.
As for asking for help I have.... In this NG many times.. from the authors
of the software and many other Atari users... I was one of the 1st to PAY
the requested fees (albe it not being a big amount) and yes I received
replies from the authors stating that their software will NOT work with PPP
or CSLIP..... I think they would know, don't you ????

The post was NOT a blast at either the authors or the ST as I stated, it
was fact....

I am sorry if it offended you but if you can PROVE me wrong by telling me
where I can Papyrus in ENGLISH (this week) and a working WWW interface that
uses PPP or CSLIP (again this week) I will eat my words in public (in this
NG <grin>)

Regards Peter Feszczur, lover of Atari ST computer equipment....

Message-ID: <32076E1E.27D7@unifr.ch>
Source record: 140586

Hi,

I'd like to connect my old Atari ST to a PC (running DOS or
Linux) in order to use the PC's harddisk.

- File access should be completely transparent for the ST
- Communication should use the RS232 interface (midi is already used)

Will TCP/IP help? Can the Atari Filesystem be extended to use another
disk via TCP/IP?

Do you know another low cost solution to access transparently to a
DOS harddisk?

Any help would be greatly greatly greatly appreciated

Some of you more experienced surfers may already know this but
there is a way to read newsgroups with Cab. The search engine at
http://www.dejanews.com/ will allow you to search for groups of
interest. Try entering Atari and Falcon (or MegaSTE :) and take
a look. It seemed to retrive the more recent articles, but I would
think that you could include "XX/XX/XX and Atari and get certain
dates. Some of the interesting points I found were;

After an article(s) is retrived, the thread can also be obtained.

Clicking on the posters address, information is provided concerning
other newgroups they have posted to (this was interesting for SinClap,
as it seems that the kill file that was started here is working:).

Newsgroups not normally available on my server (Maus, ect..) are available.

I could not post to the group with Cab, but was able to respond by
e-mail to the originator.

Hope this is of use for some

Source record: 140590

hello jared <jdaddin@dfw.dfw.net>

in your message <4u54k0$19b@fnord.dfw.net> you mentioned:
>version 1.12 of MiNT and version .70 of MiNTNet

to my knowledge 1.12 is the latest _stable_ version of MiNT. i may
be wrong though since i've been using it for some months already.
(i got mine at ftp.cnam.fr:/pub/Atari/Mint/mint112b.zoo but it can
be found on all major atari/mint sites -- use archie)

i use 0.80 but there is a version 0.90 of MiNTNet available.
you may look for net-090.tgz
at pascal.zedat.fu-berlin.de:/atari/mint/mintnet/net (160.45.10.6)

Now, regarding :
>3: What needs to be done to set it up for the
> various protocols? I have a dynamically
> allocated SLIP right now but will probably
> switch to PPP soon if I can get it going.

the "slip.xif" driver provided serves for SLIP, CSLIP and PPP(partly) protocols .
however if you have a SLIP/CSLIP dial-up connection thru modem, it is
really a good idea to get the hsmodem7 patch to fix rts/cts problems.
(hsmoda07.lzh on ftp.cnam.fr:/pub/Atari/Telecomm)

Then you need something to dial in, like dip (dip-337u-01.tgz),
which can recognize dynamic IP address - i think.

otoh, if you have a ppp link, the pppd+chat package really works fine
(ppp-212.tgz ...).

And last, in order to use CAB with MintNet you need a new cab.ovl.
i fetched mine at the same place (mint_cab.tgz) but it may not be
up-to-date...don't know the latest version.

hope this helped

bye,
fab.

2029. Cubase 2.0 (or higher) 'cracked' version needed

Newsgroup: comp.sys.atari.st

From: juda@euronet.nl
Message-ID: <4u85g1$r20@news.euro.net>
Source record: 140591

Hi:

Maybe you know where to download a 'cracked' Cubase 2.0 (or higher)
version for the Atari ST (and/or IBM PC)?
If possible, also I'm looking for an Atari-emulator for IBM PC, to run
Atari-programs on a PC...

Recently I purchased an Oberheim Matrix 1000 synthesizer, and wanted
to edit some patches. This is possible in Cubase mixermode. However,
in a (cracked) version of a friend the MidiMixer dropdown-menu lacks.

Your help is VERY much appreciated!
If you own a cracked Cubase version I would love to receive it as
attachment... ;-)

This is because the last official version of STiK can't cope with
peemptive multitasking. This will be fixed in the next public version.
Along with this fix comes CSLIP support, and other things. So it's still
worth to wait ;-)

Which version has been released in WWW131 ? If that was not mgFTP 1.3
then the 1.3 might be one of the betas which are not to be spread. If
that's the case then no wonder Brian can't find it.

> >under plain TOS. I'm guessing that since the program is KeyWare,

AFAIK there haven't been public versions since.

Hmmmm... a very good question there Rich! ;-)
Apart from it being some sort of "fix patch" for NVDI I don't know much-
what it fixes, changes or whatever.
I just responded to a message from one of my net-friends who asked me if I
could put it up on my FTP area, so I did.

You'd better Ask Harry Sideras (sidcelery@cix.compulink.co.uk) about that,
as he was the one who came with the request.

Hi All :)

Does anyone know where I can get hold of a copy of the ZIPfix program ?

I've got a couple of damaged ZIPs and I'd like to try and rescue 'em before I
give up and consign 'em to the trashcan.. :))

Thanks,
See Ya,
Paz.

-----------------------------------------------------
And RichardX_Tietjens@ccm.jf.intel.com answered thusly:
-----------------------------------------------------

>This may be even more basic than it seems to me - but do you have the
>minixfs.xdd driver in your c:\mint folder? If not, then you may have
>formatted for MiniXfs, but you haven't actually /installed/ it.

It *is* installed. I get the on screen message during boot-up, right after
the MiNT message. It says the Minix filesystem is running. I followed the
MinixFS instructions on how to install it. Both MiNT and MinixFS both state
```

they are installed on bootup, but I am unable to make any MiNT-aware shell write a non-TOS filename to the Minix partition...

STOP PRESS - PROBLEM SOLVED

Well, don't I feel stupid ;-) The only problem was that I was calling my directory 'MULTITOS' instead of 'MINT'. MinixFS still loaded from the MULTITOS directory but didn't *work* - it works *fine* from the MINT directory. I can't believe the problem was *that* simple...

Anyway, can anyone recommend a good CSH-like shell for use with MiNT and MinixFS ??

BTW, thanks to RichardX_Tietjens@ccm.jf.intel.com for trying to help.

Does anyone have the source for NOS/POP3? I'd like to modify the following to improve unattended sessions:

1 - Automatically email me session reports as to success of:
Email drop
Email pickup
News drop
News pickup

2 - Tidy up news posting:
My provider only needs one group statement before posting, not the two that NOS sends.

3 - Exit on carrier loss. Nos seems to stay active on carrier loss ignoring all "ppp sl0 idle 60" settings.

2039. Pinball Dreams Questions...(please help)

Newsgroup: comp.sys.atari.st
Date: 1996-08-06 00:00:00 UTC
From: Evil has no boundaries <chrishinds@delphi.com>
Message-ID: <5nCTAa8.chrishinds@delphi.com>
Source record: 140601

Hi all--

I just got Pinball Dreams for the Falcon, but there's a couple of problems
I'm having:

1. Apparantlty, the disks shipped out without the VGA version on them.
According to a letter in the box, 16/32 Systems will provide anyone who
wants it, the VGA version. My quesion is, the letter is dated Dec. 1994,
and I'm wondering if 16/32 Systems still exists. If it does, does anyone
know their current e-mail address. The letterhead says "CIX@Nharlow"...
can I take that to mean "Nharlow@cix.com"?? Any ideas?

2. When I try running the RGB version, it asks me for a word from the
manual. It usually first asks for Line 0, Page 0, Word 0...I don't know
what the hell that means, but nothing I type in works. Then, after failing
the first try, it gives me a second chance, but now the Line, Page, and Word
numbers are either blank, or some strange high-ASCII character.
Again, nothing I type in works. Has anyone else had this problem??
Am I doing something wrong?

I want to play this game so bad, but I seem to hit a roadblock at every
turn.

thanks for any help

Message-ID: <66020529_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 140604

I'm thinking of installing MiNT and MiNTnet but first have a few questions:

1. Do I have to have a minixfs or can I keep with TOS.
2. Do I need to use a new AES (I have 4.0 with MultiTOS but it's slow). Can I just keep with 3.40 (Falcon)? If so how, do I just put MiNT in AUTO/ ?
3. How much disk space do I need?

I already have a copy of MiNT 1.12. Basically do I just put it in the auto folder and get hold of a copy of MiNTnet?

Thanks for any advice, Gary.

: redefines the window defintions so they have a super 3D look, also it
: includes new icons and buttons, is there something like that which will
: work under MagiCMac?

Well, since nobody answered this for quite a while now, I guess I'll
have a go even though I'm probably quite incompetent for the matter.

You'll have to do different things to achieve different parts of
your aim to make the Atari user interface look a little more
'modern'. 3D window look is present under MagiC 4 and 5, AFAIK;
I don't know the corresponding MagiCMac version number. The way
dialog boxes and buttons are drawn is a matter of the application;
most should do it in such a way that MagiC should display them
as 3D. If you want 3D 'imprinted' letters on the buttons, however,
I think it's not possible (yet?).

Icons are a different matter. You'll be able to draw your own
icons with ICONCONS, which is part of the Ease package if I remember
correctly. As for colour or animated icons, I have no idea.
More specific information than this, anyone?

Yours,
Erik.

I agree with you strongly on this point. However, it is completely
impossible to keep various users from posting binaries in the
newsgroups. If they will not do it the correct way, at least give
them a place that's more appropriate. As an analogy, if you have
a dog that refuses to releive itself outdoors, do you give it
a *more* acceptable place indoors, or just allow it to continue
shitting on the sofa? These people are going to defecate in our
newsgroups, so there may as well be a more appropriate place for
it.

> I sincerely hope that people that have a memory that goes back further
> than 6 months will vote NO on this RFD.

I've read the official line on this (that the group was dissolved by
mutual agreement between you and the readership) and I've heard
stories from the other side (that the users were by and large unaware
that the group was being dissolved). For some reason, dejanews is
missing this critical period in c.b.a.st, so I can't verify either
side's story; however, I warn everyone to take both sides' claims
with a grain of salt. (I'm a bit confused by the lack of any formality
in the dissolution of the group, though. I'm aware that no procedures
exist for deleting groups, but this seemed particularly unceremonious).

PageStream 2.2b is being sold for a very low price these days. SoftLogic lowered the price on it a long time ago to about $40, IIRC. It will load PostScript fonts.

: seen...DA's vektor won't work in anything lower than ST monochrome

PageStream works in ST medium mode and above.

I know it seems strange to consider a desktop publishing program for your task, but this might be the answer you are seeking. The downside is PageStream will only export graphics as .IMG format. But there are definitely progrmas freely available that covert between bitmapped formats (i.e. .IMG to .GIF, etc...) PageStream may not even consider the text you type on screen as a graphic, so you might have to resort to using one of the snapshot utilities to grab the screen. Again, there are many freely available, as well as shareware and commercial screen grabbers.

You don't neccessasarily need minixfs. I still would recomend it.

> 2. Do I need to use a new AES (I have 4.0 with MultiTOS but it's slow). Can
> I just keep with 3.40 (Falcon)? If so how, do I just put MiNT in AUTO/ ?

Yes you can use the Original AES if you don't need Multitasking for gem
Applications. If you need it, ther is AES4.1 , N.AES and the Beta
Versions of XaAES and oAESis.

> 3. How much disk space do I need?

Just MiNT and MiNTnet will need about 1Meg or so. But remember you have
to install applications like Cab or duftp to use MiNTNet.

> I already have a copy of MiNT 1.12. Basically do I just put it in the auto
> folder and get hold of a copy of MiNTnet?

Tat is basically what you need tyo do. To setup MiNTNet you have to edit
some files. This should be documented in files delivered with the
package. If this does not help have a look at:

http://www.gti.net/azog/mint-docs.html

This is a good guide to almost everything you may whant to install with
MiNT and MiNTNet.

I have a smal Network between two falcons..
I'm use MidiCom 3.96 from Harald Blees@KL.maus.de

Both Falcons are NOT wired via MidiPort, I use a smal
Romport-Interface with 160Kb/Sec !

Thats very nice, so you can use this connection for
backups, cd-rom acces and also. no problem by use this with
single tos or Magic5. Otherway you connect your printer to
one of your machines and you
allready can print form both machines!

Ask Harald for more details.

regard, robert

>
>You can pick up a reliable legal copy of Cubase 2nd hand quite
>cheaply now.

Despite your moral pomposity, there really isn't much difference
between buying used software and piracy. In the end, the developer
looses profit: the only manner in which a developer CAN be hurt
by piracy.

It doesn't keep the owner from selling to anyone else, it
doesn't hinder the owner's use, and no production cost is
lost due to you swiping a manufactured copy.

Innane corporeal analogies do nothing but SET BACK notions of
copyright law and ethics. Until the the morally crusading twits
such as yourself realize the differences between corporeal and
intellectual property no real progress will ever be made and the
rights of those who you deem so important to 'pretend to defend'
will never be properly defended.

In reality the analogy is thus: Why don't you use a replicator
to COPY the device instead of buying it.

Unfortunately, this would soften the moral impact. Despite being a
more honest assessment of the situation, it wouldn't quite do much
for your little crusade.

Now, to the other end of the situation: the consumer.
Given the pathetic state of consumer rights wrt to software and
the similar state wrt to software engineering, piracy in some
instances is quite justified.

Some aspects of software quality do not become apparent until after
rigourous testing. Unfortunately, not enough people complain about
bug ridden software and demand their money back. If this were the
case, then perhaps consumer standards would be better and THAT
particular form of piracy would be unneccessary. As it stands, one
often needs to threaten legal action [true story] just to return
software with DEFECTIVE MEDIA.

Also, I understand that products such as Cubase include dongles. Since such devices don't even hinder crackers, who generally are more adept at security than the protection designers, only the consumer ends up hurt or inconvenienced. I find cracked versions of things I already own very useful.

When I saw this, I presumed that the user in question no longer felt like being inconvenienced by a dongle: a device that only hinders paying users and not the 'thieves' that you are so quick to rail about, no matter their motive or intent.

Have you tried the shareware "Kandinsky"? This is a cool Vector Grafics Program. If you own a GDOS that can handle Type1 fonts Kandinsky can use them (NVDI 4,.. or SpeedoGDOS 5,..) You can export your Grafic in Image Format an convert it with either the free pbm tools, or (more comfortable) the shareware GemView to gif. That is all you need for your task. To setup your html Pages everest (also shareware or free. I don't remember) with the html.krz will help a lot.

> It would cost me over a thousand dollars to get this STe
> to do VGA at a useable speed and update all of my software to
> take advantage of it.

Have you ever tried to update a PC from 1985 to use a VGA card at a reasonable speed? It is simply not possible. You seem to expect that your old computer can allways use the newest things for free. About the software: NovaVDI is free and can use ATI Mach64 cards. NVDIET4000 is not too expensive and can use ET4000 cards. Both of them make every clean software use the Grafic Card with no Problem. The Programs I talked about (Kandinsky, Gemview and Everest; pbm tools don't need grafic output) are clean.

> I'm still wondering why someone didn't design
> an ISA card case for the ST years ago...kinda like the old
> Texas Instrument TI99 series (realizing it wasn't ISA).

Because it was not neccesary. The ST did provide most users with all they needed, and Atari still made new hardware for those that needed more. Now Atari is out, and people start do build things like that. If you whant a modern machine that can stand agaist the Pentium PCs buy a Hades. It is not so very much expensive if you look at a P200 with everything that comes wihth a Hades (on Board Hardware). This is about the Range of Power the Hades with a 060 Processor is in. You can not say My old C64 can't do the things my P200 can do in the same time, so people never did anything to improve the C64.

Source record: 140375

On Sunday I posted a message asking people to e-mail me if they would be interested in a new UK Atari magazine.

Just to keep you informed I received 2 responses from people interested and 1 informing me of another magazine now available.

Do you want to put all your eggs in one basket?

The offer still stands - if there's interest I'll set up a magazine.

The Atari is still a very usable machine and we can do for each other as a community more than the big corporations ever did for us. This could be our last chance of keeping it together...

From: jacobson@oucsace.cs.ohiou.edu
Message-ID: <DvroAI.H97@boss.cs.ohiou.edu>
Source record: 140385

Hi.

My sister has an Atari Mega1 (I think) from about
1989 or 1990, and she has the original operating
system TOS that came with it then. She wants to
hook up a modem. I was told that any modem would
work, but she needs the modem software on a disk
compatible with the machine she has.

Can anyone help me figure out how to hook up
a modem to her machine? She is in Switzerland
(I am in America) so it is very tough for her to
find out any information -- she wants to get hooked
up to the internet.

Thanks (and please reply to me directly via e-mail)

I also thought this would be a good idea, after all, a CD Rom might appeal to a few thousand Atari users in some of the more common subjects.

>I hate to admit it..but unless all of the ramaining Atari developers
>work together to put out one really complete and solid software
>package that can do the basic hardware communication tasks, and
>support the current standard PC specs...for a comparable price
>to other platforms, the Atari platform is truly doomed.

Nice idea, but it just won't happen. IBM clones are now de facto the PC (as in personal computer) for most uses. I stick with the Ataris' because I don't like Bill Gates, and I don't want to be one of the crowd/herd.

Most computers used at home are just glorified typewriters/doodling pads. A cheap bog standard ST would suit most peole, but they get suckered into giving Bill and his mates a thousand dollars/pounds for something far too complicated for most uses.

>I was attracted to Atari early on because I'm on a really tight
>budget. I felt like this route would open up a venue of lower
>priced hard ware and applications, but I was terribly wrong.

Economies of scale come into force here. A Windows title will sell hundreds of thousands, whereas a GEM title will do lucky to sell 500 to 1,000 copies. But there are still a good number of shareware and even PD programs that can do a good job at a low price. Though I admit, maybe not quite the subjects you are interested in.

>Heck, I just wish I were rich...then'd I could afford to be the
>Die Hard Atarian I'd like to be :(....0

Wouldn't we all!

Best wishes

Well, long ago my MIDIMAZE disk got corrupt, I think it was the Mouse Inverter virus I got hit with. And now that I've finally got around to asking about this, I've discovered my MIDIMAZE disk has completely dissapeared... Anyway, has anyone managed to crack it? I've *bought* the game, and even have the folder-thing it came in, the manual, and even the registration card... So no flames about pirating. I even asked Binary Sounds about it and they could care less about MIDIMAZE... I've tried the PD versions, and they lack the feel of the original, mainly having my butt kicked by the Ninja-class players...

2079. M_PLAYER 1.33 Now released.

Newsgroup: comp.sys.atari.st
Date: 1996-08-07 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <960807Z234336.550dave@mbha.demon.co.uk>
Source record: 140391

Greetings all,

I have now uploaded version 1,33 (shareware) of M_PLAYER to ftp.cnam.fr, 42BBS and Chameleon BBS.

I have also sent it to alt.binaries.atari as a single file.

This version allows FLI/FLC files to be put into a loop by pressing the shift key.

For anyone having trouble with reading movie files from a CD, use the drag & drop facility and you will be OK, I understand from Guillaume (the author) that CD's only give problems when using the file selector.

Please consider registering this excellent product.

2080. Falcon SCSI port

Newsgroup: comp.sys.atari.st
Date: 1996-08-07 00:00:00 UTC
From: titus@mothra.rose.hp.com
Message-ID: <TITUS.96Aug7164633@clisome9.rose.hp.com>
Source record: 140392

I just got a Falcon but with no manual. My problem: how do I hook a standard SCSI drive to that weird looking port? If finding a connector is unlikely, does anyone have a diagram of what pins have what on them?

A second question: in interlaced mode my monitor flickers unacceptably. The monitor is a VGA that uses the 1040ST scan rate. Could this be ameliorated by a monitor with a higher scan rate?

Thanks.

I'm looking for fellow Atari users in the
great city of Calgary, Alberta.
Is there anyone out there? If there is,
please e-mail me!!!
I'm interested in finding out just how many
Atarians there are in Calgary, and finding out
about where I can get Atari hardware/software
in Calgary.

Besides, it would be nice to see that there
are still plenty of Atari supporters around,
especially in the city where I live.

Y'all come back now, y'hear?

Chow,

> (I'm a bit confused by the lack of any formality in the dissolution of
> the group, though. I'm aware that no procedures exist for deleting
> groups, but this seemed particularly unceremonious).

In general, if a moderated group has extremely low traffic (on the order of a message a year or so) and the moderator requests or agrees with the removal of the group, it will be removed. (This just recently happened with news.lists.ps-maps, for example.) Since all postings to the group have to be approved by the moderator anyway, if the moderator decides to stop approving articles the group is essentially dead. In that case, either a new moderator needs to be chosen or the group should be deleted.

I believe that the normal action for most moderated groups (news.lists.ps-maps was a special case) is to post a message to the group asking which option the readers want. I'm not familiar with the details of this particular situation.

Note followups.

You and countless others are missing the point, you only just missed
it though, in fact it's right under your nose!!!!
How many more people have joined the internet in the last 6+months?
now there is real software to use on the ATARI then more ATARIans will
join the internet, it is only in the last six months or so that the
magazines (now defunct) started to push the concept of the internet
and let the masses know that you can play on a standard ATARI ST,
What does it matter what it was like six months ago, this whole idea
started about four weeks ago and has had massive support in c.s.a.st,
you nearly had it there, it was the folk on here six months ago that
got rid of the group, NOT US <smile>

It would have been nice if you had mentioned the file name you used to
upload it to brunner.cnam.fr! The incoming directory doesn't respond to
the dir command, so you either have to know the exact name or wait till
it reaches it's final resting place in the archive! In this case probably
Music like the other versions of this video player???

I'm sure you would. That would make the sender and the recipient
(if you kept the pirated version) criminals, however, because to
transfer the software - especially "cracked" software - is a
direct violation of international copyright agreements.

What is all this American vs the rest of the world stuff? America, on the whole is a great country, not that I have ever been there. Some Americans like people of all nationality can have serious attitude problems. The world is full of wars without pointless, petty, transalantic bickering. Why not discuss things sensibly, without resorting to the war, sport, we're better/beat your country etc???

Reguards,

James (A sensible Brit who wants world peace)

:))

: Will TCP/IP help? Can the Atari Filesystem be extended to use another
: disk via TCP/IP?

: Do you know another low cost solution to access transparently to a
: DOS harddisk?
Ghostlink has already been suggested. Another option is Mint/MintNet on
the ST end of things using nfs, which is almost certainly available for
Linux.

World peace will come about when all the religious and political
"leaders" are dead and the rest of us are then able to go about
our business without being bothered by Big Brother.

Followups redirected. This damn sure has nothing to do with
either Atari or Amiga computers.

You dump it in your cab folder and run cab the cache tool menu option
is now ready for use. With it you can delete things from your cache
copy files out of your cache etc without having to check through all
of those criptic filenames.

Nick.

Sorry about that, i was in such a hurry i forgot to mention
its use.

The program is to be used with the web browser CAB and it allows
the files in CAB's cache to be extracted with their real names
and not the ones CAB gives them . If you use CAB then try this
program , you will not regret it.

>Both machines only allow 16 colours on screen at the same time - the colour
>pallette only indicates what gradation you can get between the colours.

The software is very much related to the software. If you knew a bit
more about what Spectre does, you would know it to be the case. Spectre
changes the pallete ever 50 pixels. Allegedly, this was as fast as an ST could
manage to change it's pallete.

512 is a limitation of the pallete. If the pallete were larger, spectre
could display more colors.

64*320... just about as much as your 19200 figure...

>
>The likes of Spectrum 512 and Quantum Paint allowed extra colours on screen,

>the software aren't related to the hardware specs.

This was probably a hack of the hardware just as much as spectre.
That it requires an STe show that.

Anyone send you any checks yet?

Look around for a proggy called msfconf. It should be in your Minix file
system archive; you may have to get it (the full archive) if you've used one
of the MiNT/Minix distribution packages (eg MDK, TAF). The docs should guide
you in using it.

H>what is MagiC? I know it's some kind of alternative operating system,

Right! Some kind of MultiTOS clone, but faster.

H>I thought it was an ST emulator for the Mac

That's MagiCMac, the MagiC for Macs. Enables Atari TOS programs to be run on Macs.

There's also MagiCPC which makes the same with PCs under Win95.

>Hi:
>
>Maybe you know where to download a 'cracked' Cubase 2.0 (or higher)
>version for the Atari ST (and/or IBM PC)?

Ahem... this is exactly what hurts the computer software industry, and if
people continue distributing pirated copies among each other we can soon
kiss goodbye to any Atari ST support.
It's a small platform to begin with compared to the domination of micro$oft
based PCs etc. Let's do what we can to keep the ST alive.

And after all... what you pay for ST software compared to the equivelant
for a PC or Mac is very reasonable for what you get in return,
don't you think?

2109. FS/T: Atari ST games [08/06/96]

Newsgroup: comp.sys.atari.st
Date: 1996-08-07 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4u8mfm$mev@sjx-ixn4.ix.netcom.com>
Source record: 140533

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 08/06/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first item and $1.25 for each additional item, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

I love my Atari...and I'm looking for several programs but I've found
that they're all terribly expensive, and it seems as if the programmers
find a way to force you to buy a dozen high dollar packages to get one
job done! One very good example of this is that I'd like to get the
tools to do some nice html documents. I'd like to make some bit
map graphics that include standard fonts of which I have thousands
in PS type 1. The only paint package I can find that lets you pull
in PS type 1 fonts is DA's Vektor, at a whopping $270.00! Some of
the other bit map programs will let you pull in GDOS fonts...but to
do this you need a $40.00 program that converts PS to some generic
format, and then another $40.00 that will take this into the bit-map
GDOS format. Okay...lets say I pay almost $300.00 for a vector
graphics program, I still have to get it converted over to gif
or jpeg to get it into html specs. Plus, according to the ads I've
seen...DA's vektor won't work in anything lower than ST monochrome
(I.E. ST HI&LO).

Okay, so I considered Arabesque...it seems to be a nice solid program,
but it only works in Mono right? It's around $120!

Now I look at the slew of other paint packages...it seems they only
work in color modes...or can't pull in external fonts.

This is really frustrating, in that by the time I get all of the
software to get a functional Atari, I could buy the latest Pentium
loaded with software and hardware.

Why is Atari Software so Expensive???
It makes sense that a small user base requires one to up the price
a little...but it's crazy to charge so much for features that are
basicly free on other platforms. A good example would be EXtenDOS.
If someone wants to make a CD ROM for the Atari, it would stand
to reason that they'd give you the software to access it. Not with
the Atari however...it'll set you back an extra $30 bucks. If you want
to look at SARA disks...you gotta shell out an extra $50 on top
of the $30 for extenDOS. This doesn't even include a CD! So,
what happens when SARA adds some things to the next batch of disks...
you'll have to shell out another $20 to get the upgrade if it even
comes about.

I'd like to think that some of the CD publishing companys might cut
a deal with the author of SARA where they'll include the Atari
access software ON EVERY CD they sell for a small commission per disk.

I hate to admit it..but unless all of the ramaining Atari developers
work together to put out one really complete and solid software

package that can do the basic hardware communication tasks, and
support the current standard PC specs...for a comparable price
to other platforms, the Atari platform is truly doomed.

I was attracted to Atari early on because I'm on a really tight
budget. I felt like this route would open up a venue of lower
priced hard ware and applications, but I was terribly wrong.
It would cost me over a thousand dollars to get this STe
to do VGA at a useable speed and update all of my software to
take advantage of it. This baffels me as well. A little
board that gives the Atari 1040STe one ISA slot and a VGA card
is over $400! I'm still wondering why someone didn't design
an ISA card case for the ST years ago...kinda like the old
Texas Instrument TI99 series (realizing it wasn't ISA). Just
wire an internal to external scsi port to the proper places on
the ST mother board...run a cable to a cheap card chassis,
drop in any necessary daughter boards, a power supply, a chain of Card
Slots, and a DMA line. If they'd done that you'd have one really powerful
PC capbable of intergrating all of the platforms into one via processor
cards and much more. Basicly, just make every thing on the CPU available
via plug on the outside of the machine (Like VME or Mega Port...put on
a cabled plug), and give a good DMA connection so that most of the
external cards can totally bypass the CPU when possible. Oh well,
it's too late now that PC's can be had for much less than this
dream atari expansion box could be made.

Heck, I just wish I were rich...then'd I could afford to be the
Die Hard Atarian I'd like to be :(....0

Hello--
Would be interested in purchasing a xerox or original (if the price
isn't too outrageous) of the manual for Dr. T's "KCS" (Keyboard
Controlled Sequencer). The version I have is 4.0.

Thanks.

Forrest Fang

Gary Priest <gary@the-gap.demon.co.uk> wrote:
>I'm thinking of installing MiNT and MiNTnet but first have a few questions:
>
>1. Do I have to have a minixfs or can I keep with TOS.

It depends on what applications you are planning to run; but unless
you have some VERY compelling reason not to, using minixfs is highly
recommended.

>2. Do I need to use a new AES (I have 4.0 with MultiTOS but it's
slow).

It depends on whether you want multitasking of GEM programs or you can
live without that. You could try AES 4.1, but your decision will
surely depend on how much memory you want to devote to the
OS. Otherwise just comment out the line INIT=whatever or GEM=whatever
in MINT.CNF. That will allow you to run an unlimited number of TOS
programs (subject to memory constraints, of course) from TOSWIN.ACC
concurrently with one GEM program

Can
>I just keep with 3.40 (Falcon)? If so how, do I just put MiNT in AUTO/ ?
>3.

You also have to put the filesystem driver in the MINT or MULTITOS
folder, as well as the serial drivers, if you are using HSMODA*
(highly recommended)

>How much disk space do I need?

It depends on how big an installation you are planning on. If all you
want to have is a shell, some file utilities and the networking stuff,
I'd say 10-12 Mb should be enough. Maybe you could get by with less,
but better make an estimate on the large side. If you need stuff like
GCC, NetPBM man pages or any other big packages, well, that's a
different story.

> >I already have a copy of MiNT 1.12. Basically do I just put it in
the auto >folder and get hold of a copy of MiNTnet? >

I don't really know how easy or difficult the setup of MiNTNet is;
perhaps the easiest route would be to install the TAF package minus
Chimera and the X stuff, and add to it HSMODA* (that's the way I have
done my installation). The advantage of this is that at least this
package offers at least some guidance on how to configure the system
(chatfile, syslogd, etc.)

hace@delphi.com wrote in Re: LDW Power and LaserJe

h{ What's your problem? Just load up LDW Power *** WITHOUT
h{ GDOS ***.

George,

I tried that, and all I get is a line of (seemingly) random ASCII characters. I'm sure that if I were using a dot matrix printer, I would be able to print out just fine, but I have a LaserJet, and it doesn't seem to want to respond to anything I try: nothing, GDOS 1.1 or SpeedoGdos 5.03.

Also, don't you need some sort of GDOS installed if you want to print out charts and graphs from the data in the file? This was the main reason I purchased the program.

Regards,

I have the following Atari equipment for sale:

Atari 1040STfm with 2.5 megs of RAM, internal floppy, and Mac ROMs
installed
Atari SM124 mono monitor
Atari SC1224 color monitor
Atari mouse
Golden Image 3S external 720K floppy drive
Seagate FA*ST 85 MB Hard drive
Monitor Master
Mouse Master
Spectre GCR (Mac ROMs are already installed in ST)
Supra 14.4 FAXmodem
Zoom 24/96 FAXmodem

All equipment is in working order. If you would like to purchase some or
all of this equipment, just respond with what you want and make me an offer
(I've so far gotten offers on the SC1224, the Hard Drive, and the Spectre)
Also, if you happen to have a Falcon or a Mega STe that you'd be willing to
part with as part of a trade for some or all of my equipment + cash, please
let me know. Thanks...

With MagiC 5 or BIGDOS PC-compatible partitions of any size are
accepted.
Be careful with PC/compatible partition > 32 Mbyte. Plain TOS won't be
able
to use the correctly when accessing data that reside in the area beyond
the 32 MByte limit.

I have done this with Ghostlink, serial ports @ 19200 baud & it worked fine.

I am not sure if it is reliable if you want to use the PC for something
else while the Atari is transferring data. I got Master & Slave errors
when I tried runnning Ghostlink in a DOS window & then tried to run other
programs on the PC.

Try it.

I've downloaded Escape Paint and so far it looks like one of the best (if not THE BEST) shareware paint program for the Falcon. I would like to load a tiff pic into it. I know it doesn't recognize tiff format, but it claims to read targa. I tried to convert it using GemView with no luck... any suggestions?

Please DON'T DO THIS! I was the last moderator for
comp.binaries.atari.st and it was collectively decided best to
discontinue the groups. We had at most one or two postings a month!
These days it is _much_ better to upload software to a web or ftp
site and post an _announcement_ on one of the news groups!

Really, such a group is just a waste of the little bandwidth it
produces, and the space in people's .newsrc files!

I sincerely hope that people that have a memory that goes back further
than 6 months will vote NO on this RFD.

Come on Hallvart, if you haven't kissed Atari support goodbye yet,
you're too late! The last round of kissing was more than a year
ago! There's nobody left to kiss.

Personally I made Edith Pro for the Atari free because I think that
is more profitable than trying to sell it. At least it is some
form of advertising for the products I plan to sell for Unix systems
in the near future.

Similarly, I think Steinberg should in principle be happy that Atari
users are using the `free' version of Cubase 2.0, because many of
them will buy a real version later. (I for example bought 3.0 for
the Atari after throwing away my 1040STE and plugging my piano
into the TT, and wouldn't have done so if I hadn't been able to
`try out' Cubase 2.0 in the cracked version for a few years).

The same goes for the message posted recently about Interface. If the
developers of Interface have any serious plans for their future, they'd
better allow people to use Interface for the Atari for free just to
make a good impression.

People who use cracked software will always do that as long as it is
possible, why should you want to change that? Everybody has a right
to a certain amount of indecent behaviour. I think this is just part
of the general idea of a `free market'. All you can hope is to make
them potentially interested in your future products and hope that they
might eventually buy one.

To be fair, regarding the earlier comments about piracy killing the market, most Atari owners I know have a reasonable amount of original software, as opposed to most PC owning friends that I have. I think, that bad software does more to hurt the software industry than piracy. There seem to be a lot of 'not quite right' programs around, although I think this probably applies more to shareware stuff.

Jared

PS. I know I wouldn't buy any of the stuff that the people I work for make :p

Sorry, I was referring to Web browsers and newsreaders.

>I really should have been more specific... a working WWW
>connection using either PPP or CSLIP, as these are the protocols
>both of my ISP provide me with....

Frankly, if your ISP is unable to turn on compression on a single
SLIP account, I would have to call him incompetent. My ISP has
my account set up so that I can get PPP or SLIP on the same
account simply by appending a capital "P" to my login name when I
want PPP. It's really rather simple to set up on the service
provider's end, unless they are so foolish as to use MicroSoft
server software.

>As for asking for help I have.... In this NG many times.. from

>they would know, don't you ????

I'm sure they do. Did you ask your ISP to turn off compression
on your SLIP account?

>editor...these things annoy me anyway.

You need to be able to process CGI /on the server/ in order to
use clickable maps. Will your service provider allow you to run
CGI on his system? Most will want to set up the CGI code
themselves, because it can do major damage to the system if it is
incorrectly implemented. Naturally, their services will not come
cheaply.

You can design the HTML code - and even the CGI scripts - to do
what you want on an ST (you could do it on a ZX-81, actually),
but CGI /must/ run on the server, so in this case, at least, you
can't (exactly) do it on your Atari. You couldn't do it on your
Pentium Pro multi-processor 200MHz machine, either, unless it
were set up as a web server.

Thanks,
Jeff

2143. WWW with Atari ST?

Newsgroup: comp.sys.atari.st
Date: 1996-08-08 00:00:00 UTC
From: dzander@solaria.sol.net
Message-ID: <4ue0d6$17s@solaria.sol.net>
Source record: 140417

Hi all,

I am wondering about WWW access with the Atari ST. I have some questions.
Does cab work with TOS 1.00, 2.5 Meg RAM, with hard drive?
Does this work with an SC1224?
Can cab do sound (like wav files)?
Can cab do (I forget the name) like motion picture animation?

One thing that I am concerned about is the resolution of the SC1224 monitor, I want to ask those who use cab how good are the pictures and graphics using an Atari ST?

Thanks for any information and help anyone can give. I can get a few minutes of WWW browsing at the local library but I am getting addicted and I want more! :-) Buying a new computer is not in my budget; I wish to use my Atari ST if I can.

Gregor,

You need MagicPC from Application Systems in Heidelberg. The bad
news is that it requires Win95 or WinNT and a pretty fast PC
(preferably a Pentium 90 or faster).

CoSTa runs on any Atari ST/TT/Falcon and extracts call times and durations
from NOS, ICE, CixComm, MiNTnet, CoNnect, and STiK (via STiKtime). It
calculates the cost of each call and displays a running total of your
on-line time and expenditure!!

It's available from cnam, umich and my web page (see below).

Gary.

: When I saw this, I presumed that the user in question no longer
: felt like being inconvenienced by a dongle: a device that only
: hinders paying users and not the 'thieves' that you are so quick
: to rail about, no matter their motive or intent.

Greetings,

(JEDI, please e-mail me - I am interested in your viewpoint)

I personally own Notator/Logic, Pro24, Cubase, and Cubase Audio.
I HATE Dongles. The Notator dongle has been responsible for more lost
work than I can possibly describe! If the dongle or table has been
jostled, the system will lock up when one attempts to save. Couldn't it
have been written to save in any case and only load if the Dongle is
working? I appears malicious and short-sighted to me.
Considering the excessive amounts of money that one must pay for
these programs, it is unreasonable to have to put up with this kind of
difficulty. I have $1000 in Notator/Logic, and $600 in Cubase Audio
alone. Not to mention the additional supporting hardware that I have
purchased from these companies. I deserve to be free from these hassles.
Dongles may be intended to protect the publishers profits, but they really
mostly end up hurting the honest consumer - that is WRONG!
If I could get my hands on Dongle free versions of any of these
programs, I don't think that I would hesitate to accept them. I paid my
dues already...
Aloha,

John Perez

>last chance of keeping it together...

I agree with you entirely, that is why Atari Computing is being backed and produced by Atari users like me and you. That's why Frank Charlton, Graeme Rutt, Joe Connor, Jon Ellis and many more Atari World and ST Format people are contributing to the magazine.

The backers are all Atari users, and we use Atari programs for accessing the net, not Windows applications ;-)

"From: Matthew Townsend <mabb23@dial.pipex.com> - X-Mailer: Mozilla 2.0 (Win95; I; 16bit)"

Sorry about the above, my sensibilities were offended by the mention of Windows in your posting header!

ATB, Mike

PS: The magazine is being produced entirely on STs and Falcons, with a Mac running MagicMac being used for one editorial page.

Actually there is a gopher client for mintnet available at umich and
mirrors. I had problems with using lynx (2.3.1) for gopher - it seemed
very unstable (OK with web stuff though). Not that I actually use
either much since CAB came on the scene.

Yes, I agree, I have a massive lack of knowledge...I've combed the
net for two years (whith my atari :)) and called every dealer I can
find in the US to this point...and I can't seem to find the knowledge.
Don't get me wrong...I've no love for the PC...and even less for
Microsoft. I've just become quite upset with my experiences these
days.

> ...You need to define what you want to do and then get advice from those

Yes...I'm familiar with with HTML code up to 2.00. I'd like to make
some graphics that include maps (click on a part of an image).

I'm not asking for a full featured so called html editor...these
things annoy me anyway.

> ....Considering that SARA allows you to view CD Roms that were not
> created for this operating system, your criticism about needing to
> purchase a program to view them seems uninformed.

Exactly...who is creating CD roms for the Atari? Not very many
that I know of...however...if the author of SARA were to approach
some of the disk makers about including his software on the CD,
it may actually pay us all more in the long run. I'm really glad
someone has gone to the trouble to make anyones CD's usable on
the Atari. It's just very annoying that one has to go through so
many channels to get what other platforms take for granted. For a
PC, one is basicly just buying the information on the CD, and the access
stuff is thrown in just because it is necessary to use the information.
On the Atari, you have to pay two or three times to get one function.
This is not uninformed...it's obvious that you must first buy front
end software such as SARA, and then pay again to get the CD. The
CD usually goes for about $30.00, while the Atari end drivers alone
cost that much or more. Most of the CD's made these days have front
end software on the CD...this allows the manufacturer to totally change
the standard on next year's disk if they see the need.

> with your Atari.

I expect the Atari platform to be small...really. The hardware setbacks
of an old machine are also quite evident as you say. The problem is,
it cost more to get the atari to do the equivilent tasks. For instance,
to accelorate an 8mhz M68000 to 16mhz will set you back at least
$250.00. You can get an entire 486DX2 mother board for $300. Why is it
so expensive to pop a new clock on a M68000? I don't get it!

> what I THINK you want to do.

You are exactly right. I don't need that much capability. My point
is that it will cost more to get the Atari to do what I'm wanting it
to do than it would be to switch platforms. I have to admit that I'd
rather not do this because I really like the Atari. I like the fact
it's a lean machine that doesn't waste so much. I like the few people
I know who use the platform. I admire the people who still develop
products for it. I'm not a rich person however...I'm still making
payments from the time a got a nice laser printer and a used copy
of Page Stream (I like the price on this package by the way...well
worth the charge). I am however...very frustrated at this point
because I can't find what I'm looking for...and the options that
have been given me by various vendors cost so much that I could
make a downpayment on a PC with an impressive package of software
titles.

> ....My intent here is not to be mean, or sharp with my message, but

>
Yes, I know this...I use CAB and STik quite a bit. I've been on the
beta team for some of the STik package goodies. I'm very impressed
with STik..it works..it's FAST, and it only takes one tenth the
hardware of a PC equivilent. There's no way I'd argue the quality
of most ST development and accessories. I still think it's a bit over
priced though. Unless it's a nich title like a professional level
Sequencer or Animation Engine..something really involved that requires
a lot of SPECIAL coding...it really shouldn't be over $100.00. Especially
on the TOS platform...as there are tons of PD libraries where one can
get the "thinking code" for standard atari like functions (like open
a window and allow the user to create a vector based circle) for
absolutely free. Grab these functions, put in a nice main program
to call the function and a sleek user interface, and whamo, there's your
basic ST application. I agree that it's a bit more complicated than
than that description (or I'd be doing it myself), but come on...
over $200.00 for a basic bit map drawing program? Or, you can get one
for $120 if you only want monochrome. Or you can get the stripped version
of the the $200 one for $150, but it doesn't do odd shaped cut and copys,
but it won't import fonts, and you can only save to X format.

> ....As your message seemed to be dealing around web pages, you might have
> asked how you could create images for web pages in Gif format and how you
> could use fonts. Instead you turned your inquiry into a criticism, and
> most of it about programs that wouldn't help you create web pages anyway.

I have asked...I was told I'd have to get an art package that would
incorperate FONTS to do what I'd like to do, otherwise I'd have to
literaly hand draw in every letter of the "TEXT WITHIN THE IMAGE".

> ....Your need to use PS Type 1 fonts seems unncessary if you understand
> how HTML works. Again, I don't mean to me mean, but I think you have a
> good computer and it will do what you want, but you need to rethink how
> you are going to do it.

HTML to my knowledge can not put text INTO your image. Yes, I can
make a great page without putting text in my images, but I've a
particular idea I'd like to bring to life. It's not that complicated,
nor is it that innovative. I'd simply like to make some pages for
young kids. These pages will not be entirely dependent upon one's
ability to read well in order to get nifty information about a Television
Station, and how it works. There will be all kinds of images stripped
down on a maximum of 16 colors (perfect for the ST) so that the images
don't take all day to download. These images will be rather large, and
will have hot spots in them that the user clicks to interact with the
pages. These images will include text within them. For this, I need
a paint package that will allow me to use fonts. I don't care weather
they come from the NVDI true type fonts that I have installed already,
or if I have to port in PS type fonts as you would in Page Stream or
Calamus. I just would like to be able to do this without having to
fork over 5 to 6 hundered dollars.
>
> ....If I haven't p****d you off too much, I would be glad to give you
> some straight forward advice about HTML and how you start out.

Rod, you haven't pissed me off. I've often found my self on the
defensive for the Atari platform. I've had an Atari computer of some
type since 1980. I've followed and been a part of the legacy all of
my life. I'm now using my 2nd ST computer (yes I"ve worn one slap out),
of which I find very adequate and competitive for musical work. I'm
currently running Notator, and printing out some of the finest looking
and sounding sheet music on the block. I am however getting very
discouraged by the prices on ST stuff in comparison to other options.
I'd love to get a T28 for instance...but at that price I could easily
get a PC mother board with a mid speed Pentium and a nice sized cache.
Why is it so expensive? It's only a double layerd board with a souped
up 68000 and a few other chips on board. You can get 68000's in boxes
of 12 for about 30 bucks these days! Heck, for what a 16mhz clock
board costs, I could get one of the finest SVGA cards around with a
full meg of VRAM onbaord (not that I need it). My complaint isn't about
the functionality of the ST...it's about the cost of the function.
I don't expect the ST to perform like a Pentium...I just wish ST
applications would come more in line with their performance ratio.
See, I'm getting to the point where I feel like I'm paying Mercedies
Prices for Yougo products. My little blirp about making an ISA case
was simply something that should have been done for the ST about five
years ago..when it could still be done at a price competitive with
the costs of switching over to PC or Mac. That would have put the
Atari in the position of lasting much much longer because we all
know how lean and mean the TOS/GEM M680X0 marriage truly is. It can
do a lot of things a PC running windows can't do without a megabye of
code and thousands of file accesses. Come on..admit it..wouldn't you

like to see Atari Software prices come in line with the competition from other platforms? Personaly, if it would, I'd buy a new Atari program every month! As it stands now..I have to wait three months, finance the one program I need or want the most, then wait another three months until I can upgrade my current titles or grab something new. I'm definately locked out of the CDROM market until I move up in the world (I just finished college about two weeks ago)...as I can't quite seem to scrape up the change for that first initial "SARA" purchace, nor do I have a place near by where I can take it for a test drive.

I really want to keep my Atari...but the more scratching and comparing I do on paper...the harder it gets to justify sinking more money into my ST. I'm really close to making my ST a midi road machine and taking out a loan on a PC or Mac (with a TOS emulator of course!). Now, if that T28 were to come down about $70, and that Panther VGA card were to be choped off about %25, and the mid range software were to take on midrange prices rather than professional prices, that would get another 5 to 10 years of daily use out of my Atari 1040STe. It would come out to be a considerable savings over swapping platforms.

It's not that I want to be a tight wad...
I simply don't have any choice...

Brian

: Thanks.

Try http://www.halcyon.com/brasoft/ Branch Always Software Online. They sell a product called GEMulator. It will use MagiC (which they sell with or without the package) or TOS if you can use an ISA card. Toad in America sells the package. I don't know how sells outside USA. There is also suppose to be a port of MagiC for the PC, but I don't think that is shipping.

Hi!

I'm looking for a program called "Machina musica - the symphonizer"
by Megalith software / sale with SoundPool. I've used the demo and
it's simply brilliant.

Does somebody know where I can get it ... anywhere in the world ?
I would prefer an email address or URL but snail mail addresses or
any other pointers are ok.

I disagree. If a s/w product is sold on to a 2nd user, and (assuming
this is done honestly) there's only one user of the product at a time,
and the author got paid for one user. With piracy, there can be several
users for which the author only gets paid once.

From: hoenig@faui3c.informatik.uni-erlangen.de
Message-ID: <4ucinc$cas@rznews.rrze.uni-erlangen.de>
Source record: 140481

I have written an Atari ST Emulator for Linux and SunOS 4, which has
been sitting at the bottom of my desk drawer for quite some time.
However, it does seem to work so far, and I am ready to share my work
with anyone interested (upload sites?).

From a quick scan of this newsgroup in the past five minutes I have
gathered that another Emulator already exists, somewhere out there.
Maybe someone could give me an hint where to find this emulator or how
to contact its author.

joachim

Hi there...

Subject says it all. I cannot get FLIs to play from CD while running MagiC 4. I use ExtenDOS Pro v2.4a on my Falcon 4meg TOS4.04, a x4 speed NEC drive, the latest version of the APEX media FL? player. The FLI's play OK when copied to hard drive or played from CD under single TOS, but not from CD under MagiC. I can still copy stuff from CD to hard drive too. I don't want to copy all the FLI's to hard drive from the CD I have because some of the FLI's are as big as a hard drive!! :)

Any clues?

TIA for advice...

Chris W.

Call Toad Computers, I don't know their number but you can
find them on the web. They sell a cable, I think its a 50pin
mini to 50 pin standard, for about $29 which allows you to
hook up a standard SCSI to the SCSI II interface on your Falcon.

Hope that helps!

The program tells you exactly what it fixes as it works.
For Nvdi 3.01, it fixes v_bez_fill and a few things to do with font
character set encoding.

Many thanks to Hallvard for uploading it.

: What's your problem? Just load up LDW Power *** WITHOUT GDOS ***.

George,

I tried this and all I get is a line or two of random ASCII characters.
I think that if I were using a Dot matrix printer, printing without GDOS
might work, but since I have a LaserJet, there is a problem. I can't
seem to get it to work with NO Gdos, Gdos 1.1 or SpeedoGdos 5.03.

Also, don't you have to have some sort of Gdos installed in order for the
graphs and charts to print? This was the main reason I got LDW.

Just a thought, but M_player also has trouble reading from a CD, buit only
throught the fileselector (so I am told, I am not rich enough to buy a CD!).

Can you drag & drop it? This works with M_player.

Just a thought...

Yup. be surprised you got help at all.
Worldnet requires PAP authentication, and provides only PPP. (no SLIP,
no shell). Also, the tech support doesn't support any platform except
for Windows 3.1 and Windows 95 (right now, anyway)... I used to work
at Worldnet tech support, and am an avid Commodore/Atari fan... and I
fondly remember times when tech agents would be joking with each other
and laughing because they just got a call from someone using an
"Atari" or a "Amiga"... "Why do people even USE those?"... blah blah
blah... There were four people there who didn't laugh. One was me, one
was an ST-user, one was a Falcon User, One guy owned two Amigas, and
four different ST systems (including a mega with 12 megs! drool!) and
one was an Amiga 4000 user... we kept our mouths shut, and talked
amongst ourselves about the true superior systems. :)

Oh well....

Brian couple of suggestios. If you Have Degas Elite and SpeedoGdos you can use Speedo fonts inside it. There is a limit to the number it will recognize but it works. I used to play with it years ago, when I was getting the beta's out of Atari, before I got my Falcon. It's not the most exciting way in the world to do it, but it works fine and will do 16 colors which is what you wanted.

Secondly instead of looking at getting a T28 and a Video card for your current machine think about picking up a used machine. You're in the US where it's almost always cheaper to buy a used 4 meg Falcon than a acclerator and video card. The prices vary but in the last 4 months I've seen several TT's and Falcons go at under the $500 level. Save some money up and watch for when one of the good deals come across.

She needs a terminal program and, if she plans to use a modem faster than 9600 bps, a serial patch program. HSmoda07 is the quintessential serial fix utility; in her case, all hse need do is copy DRVIN.PRG and MFP.PRG (in that order) into her AUTO folder, reboot, and it's installed.

For terminals, I'll let others make the recommendations. When you decide which one you want, go to http://www.3rdplanet.com/~starship/atari.htm and search using Filez.Com, or go directly to one of the archive sites listed to obtain the desired terminal.

>there is a heck of a lot of "anything else":), I think we both agree
>on this,

How in the living flying heck...can you make a STOS program interact
with a regular GEM program. I think STOS just barges in on normal
GEM and even TOS functions to do it's thing and only give it back
when it leaves the ST house.

Last night, I was experementing with the Pexec command which is a
assembly listing that runs other TOS programs. Ok, so I rewrote it
so it takes the filename from the A0 regester(Areg in STOS) and ended
the whole thing with the rts command which takes it back to STOS
instead of the normal "Back to desktop" trap call. Well, I called
the listing from STOS with the 'varptr' of the filename and it work
kind of well for a small program that says "hi". But since it says
that on a TOS screen, I got nothing but blackness. Ok, so maybe it
requires text to use the STOS trap call but at least the keypress to
exit part works.

However, as far as running other STOS compiled programs...no dice.
So how exactly does this thing work and what have I done wrong? it's
too bad because I would love to have my STOS-written games to run
smaller game programs without much hacking.

It's not a small program by any means, but if you already have a copy
of lynx, you can use the -dump option to do just this.
i.e.:
lynx -dump myfile.htm >myfile.txt

One possible advantage of doing it this way is that things like e.g.
indentation of nested lists is preserved.

Lynx is available from the usual places, and works fine under TOS so MiNT is
not needed.

I almost bought a Falcon. The price was right. However, combined with
the cost of a decent monitor that would display JPEG, etc. (256 colors),
I just couldn't do it. I wish there was a way around the monitor cost
(or some other solution). This would make the Falcon very attractive.

I meant the Atari software industry ofcourse, not Atari themselves.
There are still several software producers around for the TOS line of
computers (Atari and clones) and even more shareware authors.

If we keep pirating software instead of buying it the software
producers/shareware authors will go over to the PC/Mac line instead- and
none of us would want that, would we?

I have a somewhat similar setup at home, and experience the same
thing - the CD drives are not accessible. I haven't tried
installing ExtenDOS on the client system yet, but that's the next
step. It's really nice, though, to be abble to access the 2
high-density floppies, the printer, and the 2.7 gigs of hard
drive from the unmodified 1040ST. <G>

Well, actually, I was thinking about "can it tell if it's on an
STe/TT or Falcon, and use the DMA sound or DSP sound when it is
on one o'them high-falutin' masheens?"

>>Well, for 16-color (or more!) graphics, I'd rather write in
>>STOS than, say, C or Asm.
>
> Hmmm not quit got the hang of agruing have you? :)))))

Sorry, I can't bring myself to say bad things about STOS. It's a
good language - it just misses a couple of the features that I
need for what I do with Basic.

>... who needs GEM or GEM windows if making a game, anyway

For a game, it really isn't needed - unless the player is goofing
off at work and wants to be able to hide the game in an iconified
window when the boss wanders by. <G>

>... I still dont get this fixation with GEM everyone has, dont
>see why its needed, to interact with other programs then yes,
but for a stand alone program,?

The point of putting my programs in GEM windows is to make them
work in a multi-tasking OS without ugly screen messes. No real
point to doing that for a game, however.

> i think I was one of the few who actually bought the STOS
>compiler, not long after and the bloody thing was given away on

FOR SALE:

```
------------------------------------------------------
ATARI 520 ST, 512K, POWER SUPPLY, MOUSE
(2) SF 314 DRIVES (720K), POWER SUPPLY, CABLES
------------------------------------------------------
--------------
$60 + shipping.
--------------
```

Best offers welcomed. If you are in or around Tucson, Arizona,
you can pick up in person and forget the shipping.

All equipment checks out fine. I was having some
problems with one of the drives, but it seems to
be working all right now.

I have some software but it's mostly share/freeware.
It comes with STARTER.TOS, Uniterm, Kermit, and some
games.

Usually I ship US Post, but can ship UPS if requested.
Would prefer to ship within the US, but will consider Canadian
offers.

If interested, please leave e-mail.

Loren

Freddy, freddy, freddy...

Now, be honest. Did you post this BEFORE or AFTER reading the 253 threads with 734 replies? Before or after doing a websearch on +atari +st? Before or after finding the FAQ? (Which, admittedly, is a bit more difficult to find than some of the other more heavily trafficked ngs.) Just wondering.

More than once I've seen questions raised that had answers to it or its ilk within a short timeframe (within a few weeks). I've found more than a few answers through Altavista and Dejanews' archive, esp. Deja's powersearch through its archive previous to 1995, as Deja defaults to 95-96 articles.

Which leads me to the next item (which had it's own thread earlier) that the FAQ desperately needs to be updated, all of them--h/w, s/w,.. These great hardware fixes and serial mods and homebrew mem upgrades--do you really want to trust all that to some search engine, or would it be better archived in the FAQ, all of which I'm thinking that when updated, will easily be two to three times their normal length. Some really funky products have come out in the last year alone, and these need to be documented. All of this info is already out there on the web and at ftp sites and old ng articles, but one might not have to traverse the globe three times a minute to find it.

I've never done this sort of thing before, but I'd be willing to try, providing I can get some guidance and techy sort of support. I don't have all that much time, so it would be a slow project. I can't believe I'm volunteering for this. It's a good thing this isn't its own thread so that it can be less noticeable. Of course, I'm still editing this, so I have the chance to stop and erase. Nahhhhh.... Well, if anyone else cares to please [please {please (please)}] volunteer, post your beliefs that they may be known to all.

>discontinue the groups. We had at most one or two postings a
>month!

Firstly, who is included in "colletively?" I opposed the
removal, and and I think most of the netizens of
comp.sys.atari.st simply didn't know what was happening.

Secondly, the lack of postings was apparently a problem with your
email inbox, as I sent several items to you for posting during
the last months the group existed; they were neither psoted nor
acknowledged, leading me to believe that they had been rejected
without comment. If you didn't get them, it might explain why
the traffic was so low.

>These days it is _much_ better to upload software to a web or
>ftp site and post an _announcement_ on one of the news groups!

There are still many Atari users who don't have ftp access.
While archiving files is always a good idea, it is not (IMHO) the
best way to ensure wide dissemination on a rapid time scale, nor
does it ensure that the file will even be made available at the
ftp site. For example, during the past two months, I have
submitted two original packages to at least 6 different ftp
archives, including umich. So far as I have been able to
determine, the packages are now available ONLY at cnam; they have
been ignored or consigned to Coventry at all the other archives.
And, since I fix bugs and upgrade my packages continuously, even
the one at cnam is now quite out-of-date.

>Really, such a group is just a waste of the little bandwidth it
>produces, and the space in people's .newsrc files!

Considering the amount of spam arising from the thousands of
clueless commercial phone sex adverisers and the clueless "make

money fast" chain letter posters, the amount of bandwidth we are discussing here is trivial. In addition, I take issue with the concept that it would be "wasted." alt.barney.dinosaur.die.die.die is a COMPLETE waste of bandwidth, yet it's on the backbone. The several hundred users of Atari compatibles world-wide who would benefit from a moderated binaries group certainly don't consider their systems to be a "waste."

>I sincerely hope that people that have a memory that goes back
>further than 6 months will vote NO on this RFD.

In all honesty, I would expect to see an RFD to remove ALL existing Big 8 binaries groups to appear from you within a week or so, unless you simply have an ax to grind and are opposing the Atari binaries group out of some sort of spite.

I sincerely hope that people who have any sense of fair play and the ability to distinguish between new software and stale, old software, would vote YES on this RFD.

>Hi,
>I'am looking for an Emulator of ATARI ST or similar for PC as
>Softwaresolution. Where can I find it ?
>Thanks.

Hello,

AFAIK there are two software emulators
1) Magic PC: Application Systems Heidelberg (Germany)
I know there is a demo version somewhere on the net but I don't
know where. Look for mgpcdemo.exe
You need a real fast pc (>100 MHz) with a least 16 mb
RAM and Windows NT or 95. For the moment the emulator works only
with 16 colors. According to the tests I've read is Magic PC not a
fast emulator (yet).

2) Maybe a better solution is TOS2WIN: Aixit GmbH (Germany)
A demo version can be found on http://www.aixit.com. The readers
(only the subscribers) of Atari Inside have received a demo version
(on CD-ROM). For this emulator you need also a fast pc with Windows
NT or 95 and lots of RAm. With a 100 MHz pentium you reach the
speed of a TT. Works with 256 colors.

Hope this help.

Thanks, (and to the folk who mailed me) but it doesn't seem to make
the impression on Oasis2/ICE that I thought it would. I still get the "UDP bad
checksum" message quite a bit. FTP worked for the first time though, mail seems
to work, but news is still unreliable. Half the time it doesn't connect to the
server, and when it does most (usually all) the articles are missing. RSVE has
been fitted, but I don't know what I'm supposed to put in those six slots that
setter.ttp asks for.
Confused,

In a message dated 8-7-96, Titus Roth said:
|
| My problem: how do I hook a standard SCSI drive to that
| weird looking port? If finding a connector is unlikely,
| does anyone have a diagram of what pins have what on them?
|
|
Believe it or not, that is a standard SCSI-II connector. Pick up an
issue of Computer Shopper and find the ad pages for Computer Gate
International. They sell the cable you will need. For example, a
3' SCSI-II DB50 male to Centronics 50 male (#CS5003HCN) is $19.50.
|
|
|
| A second question: in interlaced mode my monitor flickers
| unacceptably. The monitor is a VGA that uses the 1040ST scan
| rate. Could this be ameliorated by a monitor with a higher
| scan rate?
|
|
I am a bit confused by your statement that it is a "VGA" (which should
scan at 31.5Khz horizontal), yet it "uses the 1040ST scan rate" (which
is 15.75Khz for low and medium res).
-
A standard VGA or SVGA monitor when used with the Falcon will give you
a nice non-flickering desktop. I should know, as I'm typing this on one.
<grin>
-
However, you will need the DB-19 to HDB-15 monitor adapater block for
the Falcon's monitor port, not only to adapt the printout, but also to
"identify" the monitor to the Falcon as capable of handling VGA scan
rates.

2213. Antmail 0.7.9 released

Newsgroup: comp.sys.atari.st
Date: 1996-08-09 00:00:00 UTC
From: Nick@flinny.demon.co.uk
Message-ID: <839699054_OASIS_@flinny.demon.co.uk>
Source record: 140323

Dan was busy or something so he asked me to post a message saying that
he has just released antmail 0.7.9 on atari.archive.umich.edu
atari/Network/Stik/ant7_9.zip This should hopefully fix most if not
all of the problems people have been experiencing with it.

I will see about uploading it to my web pages but im not too sure if
the machine is working for uploads again yet.

Nick.

If I missed thanking anyone privately, a big thanks to all those
who took the time to reply to my SCSI II to SCSI I cable problem.

Let me try to reciprocate with a bit of helpful info:

Toad indeed carries this cable for US$29, but I found a place
in Los Angeles that sells it for $19: Cable Express. (818) 346-9471.

Later,

Titus

Beats me why they do it all the time. I've found friends from all over the place, and not only became friends, but learned about their culture. Not only that... I've met some deaf from those countries, and they've taught me the sign language of their country. Thus, I know most of the manual alphabet from Britain, Australia, and somewhere else.

It's just the idiots who don't understand the culture and are too culture-shocked to adjust to that country, and refuse to learn.

Followups set.

>I fully agree!

Me too. It's really a masterpiece. For the momemt I'm using CAB to
design a homepage for an aquarist club in Belgium (although some
members of the board have pc's with Netscape and the like).
Unfortunately I've to use Netscape to check the homepage. Cab seems
more tolerant to syntax faults than Netscape.

Right you are but I'd like to add the cab_for_mintnet overlay to the
list. Without this it would be impossible to me to browse the web.

From: caffeine@smart.net
Message-ID: <4ugc57$e3s@news.smart.net>
Source record: 140330

Want to get started with Industrial Music but don't know what sampler to buy? I'll make it easy for you: Yamaha Tx16W (1.5megs, Yamaha OS) and a Kawai K-1 keyboard for US$650 plus shipping. The Tx16W is a 12-bit sampler that's worked great for me. Why am I selling it? It's simple -- I really don't have enough time to do what I'd like to be doing on it.

Anyway, I'll even throw in a BUNCH of sample disks I've made -- sounds, phrases from movies, etc etc. Movies such as "Hellraiser", "Manson Documentary", "The Trip", "The Church", "Exorcist I, and III", "The Stand", and TONS more!

I'm even throwing in two midi cables to make your life easier -- just plug the cables into the IN and OUT ports of the Tx16W into the K-1, then from the K-1 into your computer and YOU'RE SET!

My Atari 1040STf is also for sale. It includes a color monitor and TONS of disks. NeoDesk, an amazing desktop replacement, is also included.

Let's break this down:

- Yamaha Tx16W & Disks == US$450 (Includes TWO Midi Cables!)
- Kawai K-1 == US$200 (Includes TWO Midi Cables!)
- Atari 1040ST & Monitor == US$250 (Includes tons of games & utilities!)

I am located just outside of Towson, Maryland. If you'd like to order anything, I can be reached via E-mail at "caffeine@smart.net", "caffeine@lr.smart.net", or "caffeine@inetstrat.com". You can phone me at (410)-653-0512/Home or (410)-653-5582/Home. Ask for "Howie".

Prices are negotiable but close to what others are offering similar equipment for.

A full list of the Tx16W samples will be made available through "ftp.smart.net:/pub/caffeine/tx16w.for.sale" as soon as I can get around to it.

Hello fellow netters,

where can I get hold of the TOS 2.06 ROMS, preferably in the Netherlands?
I've been away from the atari scene for quite a while, but my brother has
a 1024 STf(m) I want to upgrade. I'm not sure which version of TOS it has.
And if TOS 2.06 does not work, which version does?

```
[ Web Page Update ]

http://www.ior.com/~danbrown/

Matrixx' Hellish Web Page

- Optimized html
- Expanded Atari: User Groups
- Expanded Atari: TV & Shows
- Expanded Atari: Jaguar
- Expanded Atari: Demo Crews
- Expanded Atari: STiK
- Cleaned up main logo
- Sorted links better (In my opinion)
- Cut back transfer time! (Thumbnails instead of the full size pictures)

Also featuring

- Links to Music
- Info about my local Atari Club!
- Information about myself
- Links for Atari Lynx
- Links for Atari Companies
- Links for Atari Support
- Links for Companies
- Links for Atari 8 bit
- Links for Atari General (web pages)
- Links for Atari FTP sites
- Links for Search Engines
- Links for the Gamers out there
- And probably more considering my horrible memory :)

Everyone is invited to take a look! If you see something that needs
correct, or updated - Feel free to Email me! Feedback is (! encouraged !)
welcomed!

>when it leaves the ST house.

Eh?.....I intended to make a HTML editor, When you click on view
source in CAB for instance, it will load EVEREST or whatever, well I
got it to load my document displayer, simple enough, just point to
it?,
But wanting to turn my displayer into an editor I would need the name
of the html file being viewed, and of course where it is?,
This info is held on whats known as the command line,
Unfortunatly STOS is one of the few BASIC'S that don't have access to
this, So Rich made a small program that grabbed the info, saved a
small ascii file to disk with the info on, then my program runs,
collects that info and hey presto!!!!, a sound idea we came up with,
The whole concept of a html editor went on the back burner so this
hasent been investigated further at the moment, but the concept is
fine :)

>Last night, I was experementing with the Pexec command which is a
>assembly listing that runs other TOS programs. Ok, so I rewrote it

>requires text to use the STOS trap call but at least the keypress to
>exit part works.

Oooer, if I follow? you want to run a STOS program that in turn acts
as some sort of menu to run other programs, then return to STOS? is

that what you want?,
Is this an existing program or one being made, you can load machine
code programs into STOS and run from within your STOS basic program?,
you can even pass variables to them :) hmm but you probably want to
run any program, what you making? a desktop or something :)
Well all things are possible one way or another, if you explain what
you are making, what you want to run, and what you want to happen,
then we can sort it out:)

>However, as far as running other STOS compiled programs...no dice.
>So how exactly does this thing work and what have I done wrong? it's
>too bad because I would love to have my STOS-written games to run
>smaller game programs without much hacking.

tell me what other game programs, ? :)

Maybe this should be in comp.sys.atari.programmer

Robert,

Tos 1.04 has no floppy problems. How well does your internal drive work?
It's possible that your Glue chip needs to be reseated if both drives are
a little flaky. It's also possible that your external drive is just now
deciding to take a dump, or that the cable connections aren't so good.
Also, if it only happens with a few certain disks, they may be going bad.

Dan

Titus Roth wrote this to All about Falcon SCSI port:

TR> I just got a Falcon but with no manual. My problem: how do I
TR> hook a standard SCSI drive to that weird looking port? If
TR> finding a connector is unlikely, does anyone have a diagram of
TR> what pins have what on them?

Hi Titus,
The "strange" port is in fact a standard SCSI-II connector (the same can be
found on many PC SCSI controllers, like for example Adaptec) and cables from
this 50-pin HD-D-type connector (if I remember correctly that should be the
correct name) to the standard SCSI-I 50-pin Centronics, which is most common in
external SCSI-cabinets are available in any computer shop.

TR> A second question: in interlaced mode my monitor flickers
TR> unacceptably. The monitor is a VGA that uses the 1040ST scan
TR> rate. Could this be ameliorated by a monitor with a higher
TR> scan rate?

I don't believe you should be able to get the flickery interlace video modes
when you use a VGA monitor - they should only be available if you use an RGB
monitor or TV. When using a VGA-adapter, one of the pins is grounded to tell
the computer that it is a VGA and the video gets set to the right output
frequencies.
Check if your adapter is ok.

Best regards,

Claes

>
>Distributing unauthorized copies of software is a crime. Period. If the law

This is the most primitive form of morality actually.

>bothers you, rather than telling everyone how "morally superior" you are

I said no such thing. I merely stated that those obsessed with petty
rules that they don't even understand shouldn't pontificate to the
rest of us when they don't even know what a proper analogy is.

>becasue you think the law is wrong, the proper method of redress is to get
>the law changed.
>
>Additionally, /used/ software doesn't increase the number of copies in
>circulation (if the seller is honest), and therefore your argument is
>invalid, because you have neglected the "market saturation" element of piracy.

I buy used software when CompUSA is still trying to buy it at full
price oftentimes when that software is still a best seller. I get
to use the software in a manner that does no benefit to the software
'owner'. The orginal licence holder get's some money back, an
intermediary gets some profit, and the 'software owner' is deprived

of a customer and any profit derived from same.

The end result is the same. Except 2 other people who are not the
'software owner' benefited financical from the arrangement.

>

>As long as Cubase is available from legitimate retailers, making pirate
>copies hurts someone who has a legitimate investment in legitimate copies.
>If you get the idea that I think pirates are illegitimates, you're following
>my arguement perfectly.

A terminal program != a terminal.

Until you moral pundits get this idea through your heads, no
progres on this issue will EVER be made. Your dreaded piracy
will be with us until the end of time because of the ideas
that you propagate.

The analogy is intuitively false. Even the dim realise this. By
clinging to it you only make your own ideals look foolish. Absurdity
by association.

Source record: 140345

Since an Oasis 1.35e crash I have in the /spools/mqueue/ folders some strange files 352719273564 bytes. I can't read/view/delete then as they don't exist. Is there anyway to delete them? Are they taking up memory on the HD? When I view info on E:\ get a *(*)&&#65533; bytes used. I'd be grateful on any info anyone can give, this is so annoying, I'm tring to purge my HD ATM, what with WWWcache, Cix messagebase and Oasis a 65mb partition is filling up :(((I have since reinstalled oasis though, hope this does not happen again!!!

Thanks,

James

2239. Re: Cubase 2.0 (or higher) 'cracked' version needed

Newsgroup: comp.sys.atari.st
Date: 1996-08-09 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <Dvw682.CoF@news.hawaii.edu>
Source record: 140349

: Paul Juda did NOT indicate that he had a legitimate copy of Cubase. If he
: had, probably no one would have jumped down his throat. However, his
: original post asked people all over the world, by inference, to become party
: to software piracy. As a software developer, I deplore piracy. As a citzen,
: I feel compelled to decry it. If you feel differently, agitate with your
: legislators to get the copyright laws changed. But if you succeed, remember
: who's to blame when developers stop releasing new software.

This is a bit off of the topic, but I feel the need to vent...

I personally own more legitimate software than anyone that I have ever known, but I can't agree with most of the ways that publishers have attempted to prevent piracy. I truly believe that copy protection schemes played a very large role in killing the Atari software market... Why?

Most entertainment software that is copy protected runs on only a small percentage of computers. After buying games like Vroom and Dragon's Lair, I was quite dismayed that my original disks only worked on 10-20% of the STs that I had access to. Even when these programs did work, they didn't work consistently. Games like Epic and Robocop 3 which would only run about 50% made me wish that I had kept my $70 per title. Honestly, I have at least 100 games that have difficulty running, or do not run at all.

Then there are high end applications such as Notator SL, Logic Audio, Cubase, Cubase Audio, etc... These programs have INCONVENIENT hardware dongle style copy protection which frequently results in the loss of work. The Notator Dongle would frequently malfunction and result in a computer lockup on attempts to save. Some people who use their machines for a single program or application may not be bothered by this, but I literally have at least 10 carts that I need to be able to use. The inconvenience and wear and tear on my ports is unjustified, especially considering the excessive price of these software packages. When is someone going to figure out that you can sell ten times as many pieces of product at $100 than you can sell at $500? The bottom line is that I paid huge quantities of money for these programs and I deserve to be able to use them without difficulty.

These methods only serve to punish the honest consumer and dissuade sales - I have certainly wished that I never bought many of these programs.

Since when was it okay for people to sell a product that didn't work, and then blame poor sales on piracy?

Aloha,

John Perez

Paul Juda wrote this to All about Cubase 2.0 (or higher) 'cracked' version needed:
PJ> Maybe you know where to download a 'cracked' Cubase 2.0 (or
PJ> higher) version for the Atari ST (and/or IBM PC)?

Hi Paul,
Software piracy is the same as stealing and as illegal as theft!
You've got a cheap computer, then you buy expensive synths, maybe an expensive mixing console and expensive effects processors and then you want to steal the software, which is more expensive than the computer but cheaper than most synths and in fact is necessary for using your synths!
If you can afford the rest of the equipment, you can afford the software too - and if you buy it, you'll be a little more certain that your computer platform will continue to be supported by the programmers.
If you continue stealing programs, eventually the programmers don't sell enough programs to be able to make a living on it and they'll decide to stop programming for the TOS-machines. This is a far more greater danger in such limited markets as Atari than in huge markets as PC.
What you want to do is actually to make the programmers put a great program together and then give it away to you. Would you like to work for several months (or even years) and then not get any salary for it?

PJ> Recently I purchased an Oberheim Matrix 1000 synthesizer, and
PJ> wanted to edit some patches. This is possible in Cubase
PJ> mixermode. However, in a (cracked) version of a friend the
PJ> MidiMixer dropdown-menu lacks.

That's really great! ;)
Then you can't use it. ;)))))))
OH! By the way - would you go to your local music store and steal a Kurzweil K2000 for me? I really need to have one...
Can't you see that's the same as asking me to get pirated software for you?

PJ> If you own a cracked Cubase version I would love to receive it
PJ> as attachment... ;-)

Wouldn't dream of it, but I might help you by sending your request on to Steinberg and we'll see if they can help...

Regards,

Claes

What you have is most likely a recursive directoy.
This is serious corruption. You need some Disk Utility.
There are a few good shareware programs. I would recommend
ST-Tools. There is a few others. . . maybe others could
volunteer what they use. ST-Tools will normally fix this problem.
Let me warn you: If you delete it, you could end up with an
empty harddrive.

Here's ST-Tools:
ftp://f.ms.uky.edu/pub2/atari/utilities/st_tools.lzh

Here's some others:
ftp://f.ms.uky.edu/pub2/atari/diskutils/diskscan.arc
ftp://f.ms.uky.edu/pub2/atari/diskutils/diskmech.arc
ftp://f.ms.uky.edu/pub2/atari/diskutils/hospital.arc

2246. OASIS2 & ICE - Comment List # 43 (09/08/1996)

Newsgroup: comp.sys.atari.st
Date: 1996-08-09 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <50904976_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 140356

Oasis Report - D.M.Brewood - Updated: 09/08/96 # 043 (posted to
== testers)

Comment list posted to the following official beta testers:

Colin Bernau (colbee@tyndale.apana.org.au)
David Greenhough (green@spirit.demon.co.uk)
Rod Keen (beta@gaiasys.demon.co.uk)
Neil Martin (Neil@yr-ynys.compulink.co.uk)
Gary Priest (gary@the-gap.demon.co.uk)
Dave Levi (Dave@levihome.demon.co.uk)
Phil Yeadon (Phil@yeadontt.demon.co.uk)
Boris D. Cahan (bdc2@po.cwru.edu)
Danny Bhabuta (dbhabuta@cix.compulink.co.uk)

Test Machine: Falcon 030 running MagiC4 with Thing, operating in 1024 x
768 x 16 colours.

This comment list will also be posted in the NeST N.SUP.OASIS_ICE*
message echo on a weekly basis.

* = Echo now gated with the AtariNet A.SUP.OASIS_ICE echo.

This data is based on the alpha version(s) provided on:

ICE = 07 August 1.56
OASIS2 = 06 August 2.06 (same issue as the package).
ICE_NET = 06 August 1.24

Package 2.01 was the first stable release version.

Package 2.05 released 03/06/96.

Package 2.06 is under alpha test by myself now.

New in ICE since the last beta OASIS2 release:
==

1.03

- TCP checksum error problems fixed 100%
- News History file update for numerical format.
- All IP routines now in machine code.
- FTP now supports use of anon as well as ftp as a username.
- When an 'IP: Bad checksum' error message is displayed the ERROR_PING
flag is not picked up and no ping is generated - fixed.
- ICE Usenet Window does not always display contents - fixed.
- Clock adjustment code implemented in ICE.

- Mail index system implemented.
- Neil Martins' "Incoming news keeps stalling with bad packet (IP) errors (PPP)" problem has been cured by installing HSMODA07 on his TT.
- IP: bad checksum bug when after starting a SLIP connection or bad packets when a PPP connection is started - fixed.
- When ftp'ing to Demon's WWW homepages ICE no longer gives error 550 (Access Denied) as soon as the home directory is entered.
- Error 008 in ICE when sending a 251k news binary and bringing in a 283k email. After error 008 crashes back to MagDesk, even throwing Thing out, and locks the Falcon solid - Fixed.
- Ftp upload options now active.
- When making an Ftp upload the filenames can be set to be in lower or upper case.
- Mail packet queue now limited to 7k held at both ends of the link.
- Ftp multiple directory redraw problems cured.
- R/S 'light' flickering fixed.
- Adjustment of receive data window size inceases throughput dramatically

New in OASIS2 since the last beta OASIS2 release:
==========

2.06

- Font size controls added to Oasis.
- Complete MIME send routines (Partials created Automatically) with iconic control panel.
- GMT offset system recoded - now does not reset system clock.
- Send MIME bugs fixed when using external editor.
- Not enough disk space when unbatching news no longer results in the incoming mail being deleted.
- MIME partial size selectable.
- 'Mail To:' support added for MIME. **
- OutMail now shows outgoing MIME files correctly. Will be added to the Internet Window. **
- In the Outbound window - Window header should changed to show 'outbound'.
- Time / Datestamping of files.
- MIME partials marked as expired once processed into a single MIME.
- 'A' flag now indicates in the mail window that an automatic Oasis function has occured.
- Local time shown in the newsgroup details dialog, but GMT still written to the groups file.
- Spell checker added to OasisEd2.
- De-fragging system built in to Oasis to stop problems when unbatching news.
- Implemented use of SHIFT HOME to move cursor to the bottom of the mail and news windows.
- Two bugs from: Stephen Mulrine <robotron@moroder.demon.co.uk> fixed:
- If an outgoing mail message has a line beginning with a dot, the dot will vanish in transit.
- If an incoming mail message has a line beginning with a dot, an extra

dot will appear (I assume).
- Defragging routines debugged.
- Unbatch variable bugs fixed.
- Resources updated.
- Newsgroup file size shown in the Group Maint window (Kbytes).
- MIME send to multiple address bug fixed.
- Support for mail index implemented.
- Notification of new emails for each user.
- Mail save bugs fixed.
- Overview bug fixed when adding users to yellowpages from news.

** = In progress and will be completed before the next package release.

New in ICE_NET since the last beta OASIS2 release:
==

1.23�

- Mydials removed and in house code generated.
- Windows style pop-up's added.
- Frond Support added.
- Font size controls added to Oasis.
- Dialogues reworked.
- Unbatch & Post Local flag bugs fixed.
- Support for ftp upload added.
- Icompatibility problesm with OASIS fixed.

New in Spider since the first official OASIS2 release:
==

- Basic code evolving.
- Code written to display raw text without HTML tags.
- Now coded in machine code.

List of possible bugs discovered in ICE so far:
===

- Fix PPP packet bug where carrier drops.
- On his TT Neil suffers from:
- Always IP checksum error on 'loging' (note: SB 'logging) in.
- Several times had error 65 when exiting ICE to Oasis, then crash!
- If your email address doesn't include a host, eg brian@sol.co.uk, when
you do an anonymous ftp session, Ice sends your address as
brian@.sol.co.uk - this confuses the other end into thinking you've
messing them around. [Brian Baird: 90:100/113]
- Message size in viewing window when using finger wraps round to the
next line.
- ICE does not exit straight away when selecting Quit in the menu if
the various windows are iconified.
- News window blanks out after dialer window has closed.

List of possible bugs discovered in ICE_NET so far:
===

- $GET_IP seems to be sensitive to spaces - it wouldn't get my IP address because I'd missed the space which is sent after the string it watches for.. Unfortunately Ice_Net won't let you put a trailing space in the string lines. [Brian Baird: 90:100/113]

List of possible bugs discovered in OASIS2:
==========

- The 'Local Post' bug is back under MagiC 4 whereby Oasis crashes out when posting the message locally.
- Oasis2.prg doesn't work properly with Outside on some Falcons. It seems to allocate all virtual memory with loads of disk thrashing and does run but takes several minutes to load. ICE.PRG works fine.
- Daily Net window does not resize to accomodate the size of the newsgroup names [Falcon only].
- When adding a group of new newsgroups the first group is sometimes not added into the groups file, or is added with a garbaged description.
- Stray .'s still to be found in the NEWGROUPS file.

F.R.O.ST Development:
==========

Done:

- Coded front end so it is MagiC / Falcon compatible.
- Added GEM window code.
- Added ICE interfaxce code.
- Recoded the email processing code.
- New database format eveolved and working.
- NeST address's now have the format of Daron.Brewood@nest.demon.co.uk
- NeST email will now export to the internet.
- MAIL.IN file scanned to locate mail from the internet for NeST users.

To-Do:

- Import mail from the internet into NeST.
- Add 'FROST' user system into OASIS.
- Export NeST echo's to the internet.
- Import internet newsgroups in to NeST echo's.
- Add support for sending archived NeST mail packets out to an internet address in UUE / Base 64 format.
- Add support for receiving a tagged internet UUE email and processing it out into an archived mail packet for NeST to process.

The following other files are maintained by myself for the OASIS2 / ICE system:

FAQ.TXT - Frequently Asked Questions.
GOSSIP.TXT - Latest News and Gossip.

These will be posted by request only:

NEW_ICE.TXT - ICE Net Development History.
NEW_IC2.TXT - ICE Development History
NEW_OASI.TXT - OASIS2 Development History.

TO_DO.TXT - To-Do List for OASIS2 / ICE.
WANTED.TXT - Things needed for OASIS2 / ICE devleopment.

Phil Yeadon and Dave Levi have my full permission to use this listing as a
master listing, and to thereby generate history files for Oasis/Ice
release archives. This entire listing however as always remains the
property of myself.

chro_MAGIC Software is providing North American customer support for
Pinball Dreams (and the other 16/32 games... Steel Talons, Dino Dudes,
etc). If your Pinball Dreams package includes a warranty card pre-
addressed to chro_MAGIC, just fill it out and send it in with your
request for the VGA version. If there is NOT a chro_MAGIC warranty card
in your package, send in your original Pinball Dreams Disk with your
request for the VGA version.

And anyway, when you buy a piece of software you not only buy the software itself but also support, the security that bugs will be fixed, the ability to upgrade to later versions, etc. Since you get none of this when buying an Atari version of Cubase I think it should at least be a *lot* cheaper--and even though I own a registered version I can perfectly understand why people would rather just get a pirated version.

2253. TOS Upgrade for C-Lab Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-08-09 00:00:00 UTC
From: jimhanner@e-mail.com
Message-ID: <4uest7$nu2@ef2007.efhd.ford.com>
Source record: 140437

Hi,

My C-Lab Falcon MkII came with TOS 4.02 fitted. As I mainly use the
system to run Cubase Audio could anybody advise me...

a) What benefits would upgrading TOS give me?
b) Where do I get an upgrade from? (I'm in the UK)
c) Is it tricky to fit/install?

Thanks in advance,

Jim

What do you mean with "relogging"? Normally a hard disk driver
automatically
recognizes a media change when the drive is accessed after the media was
changed. The user doesn't have to care for it, the driver does all that
is
necessary.

The Falcon has a standard SCSI-2 port. So all you need is a cable with a
SCSI-2
connector.

Distributing unauthorized copies of software is a crime. Period. If the law bothers you, rather than telling everyone how "morally superior" you are becasue you think the law is wrong, the proper method of redress is to get the law changed.

Additionally, /used/ software doesn't increase the number of copies in circulation (if the seller is honest), and therefore your argument is invalid, because you have neglected the "market saturation" element of piracy.

I> Innane corporeal analogies do nothing but SET BACK notions of
I> copyright law and ethics. Until the the morally crusading twits
I> such as yourself realize the differences between corporeal and

As long as Cubase is available from legitimate retailers, making pirate copies hurts someone who has a legitimate investment in legitimate copies. If you get the idea that I think pirates are illegitimates, you're following my arguement perfectly.

I> ... piracy in some instances is quite justified.

When you can demonstrate that the software copyright owner has defrauded customers (as in the case of Freeze Dried Terminal), there is some justice in distributing copies to people who have not bought them. This is the "eye for an eye" school of justice (I happen to subscribe to it), and supporters of this logic should probably support the death penalty for capital crimes, also.

I> Some aspects of software quality do not become apparent until after

I> felt like being inconvenienced by a dongle: a device that only
I> hinders paying users and not the 'thieves' that you are so quick
I> to rail about, no matter their motive or intent.

I made a copy of Dungeon Master for someone this week. Before I would copy it, I made them send me their worn-out original disk, and then I made them a working copy and mailed both their broken original and the new copy back to them. "Fair use" includes archival copies, and when someone has proven to my satisfaction that they have purchased what they want a copy of, I have no problem helping them get a working backup.

Paul Juda did NOT indicate that he had a legitimate copy of Cubase. If he had, probably no one would have jumped down his throat. However, his original post asked people all over the world, by inference, to become party to software piracy. As a software developer, I deplore piracy. As a citzen, I feel compelled to decry it. If you feel differently, agitate with your legislators to get the copyright laws changed. But if you succeed, remember who's to blame when developers stop releasing new software.

It's a standard SCSI-2 external port, same as on the clones. A short
(18-inch) cable will run $20-$30; longer ones can cost $65 easily. One of
the many "benefits" of using PC-stnadard parts. %^(

Hi Peter,

There are actually a lot of atari enthusiasts in Calgary. The city used to support four or five dealers, now sadly there are none. There are two users groups, Calgary Atari Computer Enthusiasts (CACE) and the Calgary Atari users group (CAUG). Both groups have BBS CACE at 2795375 and CAUG at 720-2286. CACE meets on the first and third mondays of the month and CAUG on the 2 and fourth wedensdays.

Your best bet for hardware and software is computer direct in Edmonton. Although most of the locals get by dealing with TOAD. It is really too bad that the there are no dealers surviving in the calgary area.

I am the liason person for CACE and I can be reached at 271-1481. (sometimes - when my wife doesn't have the falcon hooked to the net).

BTW if there are any other calgaryor area people lurking out there we would love to hear from you.

2271. Atari Mono Monitor Spares

Newsgroup: comp.sys.atari.st
Date: 1996-08-09 00:00:00 UTC
From: dbacon@h659.dunton.ford.com
Message-ID: <4ufja9$sfj@eccdb1.pms.ford.com>
Source record: 140455
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have a old mono monitor which has just died. On investigation it appears to need a new Line Output Transformer. This part as many others appears to be obsolete, does anyone know a source for this component, or anybody who could repair such.

Many Thanks

If you mean the power transformer, that never did have a replacement
available. What happens at that end is that one of those 200 volt diodes
on 18-volt service fails shorted, and overheats the transformer primary,
which is 640 turns of #28 (us) wire, for 120 VAC US service. Check the
diodes first.

Modern transformer primaries are wound in two sections, with a splice
between them that acts as a fuze/fuse. Depending on ambition level, the
spot-welded shielding comes off by prying with a big screw driver, and it
is not too far down before you come to the blown link, which can be
replaced with a short piece of solder. Epoxy glue will hold the shielding
in place well enough on reassembly.

It is probably cheaper to find another one than to pay someone for the
work required to fix and possibly rewind a transformer.

All parts other than the flyback transformer are common parts, and there
are new guns available for the CRT, if you can find a CRT rebuilder.

If you take it apart, before reassembling, take the 2.2 UFD nonpolarized
electrolitic next to the horizontal switching transistor heat sink and
move it to the bottom of the chassis. It gets too hot there to live long.

AFAIK, there is no educational software for the ST that is not good.

In the US, TOAD has about all there is, and they can be reached by e-mail
as toad@charm.net, or http://www.charm.net/~toad/

I agree with you completely. Note that I'm _not_ agreeing with
software piracy - neither were you. I'm just agreeing with your
points. I'm a little tired of hearing all the problems of software
developers (and, there are many legit problems! :) while we the
software users are ignored. We have many legit problems that perhaps
the developers should listen to.

2275. Hi, Few primary questions.

Newsgroup: comp.sys.atari.st
Date: 1996-08-10 00:00:00 UTC
From: "K. Ellis" <kellis@primenet.com>
Message-ID: <Pine.BSI.3.94.960810231236.21888A-100000@usr02.primenet.com>
Source record: 140209

Hi guys, I am really confused about few little things.
First: I would like to know, what is a good order in the auto folder.
~~~~~
For instance:
~~~~~~~~~~~~~
On the top trying to keep files for the graphics, like
NVDI, Deskpic , Overscan or whatever.
Then you should get the system files, like Foldr100.prg,automouse,
cachex.prg or whatever.
Then at the end tring to keep the serial modif like, stiktsr, or
Hsmodem or whatever.
Those were just for example. I really don't know what rule should I
follow.
I have a pretty stable system, but I have to play for hours before
it become stable. And I am curious too, so I want to know.

2nd question:
~~~~~~~~~~~~~
How should I set the flag for tsr and the accs. I am using superflag.
But for that kind of prgs the flags are difficult to configure.
Is there any rule?? Like don't set the Fast load for acc or Tsrs. Or
set the acc with the private flag and never from fast ram. Or
whatever.
I really don't know about this. Any help would be great.
There is too many little factor that can influence your system. So
please HELP ME. Feed me, Feed me, Feed me...

Thanks a lot in advance...
~~~~~~~~~~~~~

2276. NVDI with Atari works

Newsgroup: comp.sys.atari.st

Hi, I have a little problem, not that big but a little annoying.
Atari works under NVDI has a little problem when I take a block in the
text. Atari works draws some extra lines, no big woop but I have to
redraw the screen every 5 mins. Anyone with an Idea?!?!?!?!?
Thanks.

Hi! yes you can. You'll need NVDI. I think that just a plain GDOS
driver would work too (from the internet you can get AMGDOS.PRG or
something like that, NVDI is a commercial Software).
Then you edit your assign.sys file with just a plain text editor, like
(qed, 7up, Everest or whatever).
Here's a copy of my assign.sys file.

TM>> 512? :)
HS>
HS> While all that's true, the fact that Spectrum 512 existed doesn't
HS> relate. Both machines only allow 16 colours on screen at the same time -
HS> the colour pallette only indicates what gradation you can get between the
HS> colours.

I'm aware of that, but the reason why I brought up Spectrum 512 was because it purported to give you all 512 available colors on screen at the same time. Later modifications to the standard allowed you to get all 4096 colors in the STE pallette, on screen at the same time. Certainly these two numbers aren't merely coincidences. Both are set directly to the palette. If the ST palette was 256 colors, it would have been called Spectrum 256, and you'd have been limited to 256 on screen colors.

HS> The likes of Spectrum 512 and Quantum Paint allowed extra colours on
HS> screen, but when you consider that Doug Little's Photochrome claimed to
HS> get 19200 colours onto an STe screen at one time, you'll see that the
HS> capabilities of the software aren't related to the hardware specs.

In the case of PhotoChrome, no. But certainly they are when it comes to Spectrum.

dzander@solaria.sol.net (Douglas Zander) said:-

> I am wondering about WWW access with the Atari ST. I have some questions.
>Does cab work with TOS 1.00, 2.5 Meg RAM, with hard drive?

Plenty of RAM I would have thought and the hard drive is handy. TOS
1.00 *might* be a problem, though. Others here will know for sure.

>Does this work with an SC1224?

CAB works fine on a TV here (though the dialogs are too big in low rez
without a big screen emulator like MonSTEr). So it should work OK on
an SC1224.

>Can cab do sound (like wav files)?

Yes with the aid of a helper application (ie it calls another program
to play sounds, like other browsers). I use the Long Play Sample
program as it seems to do both .wav and .au files. It's available at
Umich as LPS123.LZH, probably in the Sound directory.

>Can cab do (I forget the name) like motion picture animation?

Again you can use helper apps, though they are all a little limited on
a standard ST. By which I mean they are *very* slow (with the
exception of the Movie FLI/FLC player) and silent. Players are
available for MPEG, AVI and Quicktime: you'll need to search the FTP
archives as I can't remember precisely where I got them from.

> One thing that I am concerned about is the resolution of the SC1224
> monitor, I want to ask those who use cab how good are the pictures and
> graphics using an Atari ST?

Unless you're in low rez you'll just have a monochrome display. CAB
dithers colours to whatever rez you're using, though it sticks to
monochrome with less than 16 colours. Obviously a zillions of colours
JPEG is going to look a little flat in black and white, but generally
the pictures are usable. It also doesn't attempt to display background
images unless it has at least 16 colours to play with.

I either use a mono hi-rez display or a MonSTEred lo-rez most of the
time, so I'm unsure if med-rez still suffers from distorted graphics
(stretched vertically). It did with older versions, but I have a vague
recollection that the docs mention this being fixed now.

>Thanks for any information and help anyone can give. I can get a few

JH> My C-Lab Falcon MkII came with TOS 4.02 fitted. As I mainly
JH> use the system to run Cubase Audio could anybody advise
JH> me...
JH> a) What benefits would upgrading TOS give me?

Hi Jim,
I don't know any specific problems with the 4.02, so I don't believe you would
notice any difference - it works as good as the newer 4.04 with Cubase Audio.

JH> b) Where do I get an upgrade from? (I'm in the UK)

Probably System Solutions.

JH> c) Is it tricky to fit/install?

It's a PLCC-chip that's socketed, but without the proper tool for pulling the
old one out, you have a risk of damaging the socket.

Best regards,

Claes

2290. Calling all UK user group representatives

Newsgroup: comp.sys.atari.st
Date: 1996-08-10 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <17403_hsideras@mettav.demon.co.uk>
Source record: 140263

Hi All,

Could all/any *members* of UK Atari User Groups (not necessarily the people that run them) - contact me wrt the upcoming Atari shows and other matters?

Email responses preferred, but if you don't have (or understand) Email a public reply here would be acceptable. Basically I need a phone number out of everyone who replies - either your own or that of the best contact name at the group you belong to.

Many thanks

Regards, Harry Sideras - UK Association of Atari User Groups

There is now a NEW FREE Internet E-mail service for Microsoft Winodows called Juno. Juno is willing to make software for any platform computer, but only if they get enough people asking for it. That's what happened with all the Mac users, enough people wrote and e-mailed Juno asking if they could make software for the Mac too and they did. Juno is very fun and TOTALLY FREE. No fees to pay EVER! If you'd like to see Juno software made for the ST, then e-mail Juno at comments@juno.com and let them know!

2299. FS: ATARI Mega4 system w/SLM804 & ICD hard drive & software

Newsgroup: comp.sys.atari.st
Date: 1996-08-10 00:00:00 UTC
From: rjre@aol.com
Message-ID: <4uhebb$ade@newsbf02.news.aol.com>
Source record: 140272

I am selling the following ATARI system:

MEGA ST 4 WITH BUILT IN AT SPEED IBM EMULATOR AND TOS 1.4
EXTERNAL 2ND FLOPPY DRIVE
ICD FAST DUAL HARD DRIVE (50MG & 105MG)
SLM 804 LASER WITH PHANTOM MODIFICATION,EXTRA PAPER TRAY,
EXTRA SLM INTERFACE, AND TONER
(PHANTOM ALLOWS SLM TO BE HOOKED TO SYSTEM ANDTURNED OFF)
SM124 MONOCHROME MONITOR
MONITOR SWITCH (FOR SWITCHING BETWEEN A COLOR AND MONO MONITOR)
2400 BAUD ZOOM FAX MODEM

OVER 60 SOFTWARE TITLES INCLUDING
(ALL PURCHASED WITH ORIGINAL DISKS AND MOST MANUALS):

XBOOT (BOOT UTILITY),CALAMUS SL,PAGESTREAM,PRINTMASTER PLUS,
LDW POWER,DATAMANAGER PROFESSIONAL,THUNDER,PROCPY,WARP 9,
DIAMOND BACK 3,ST WORKS,SUPERBASE PROFESSIONAL

AND MANY OTHERS INCLUDING OVER 40 GAMES! PARTIAL LIST:

LEMMINGS,ARKANOID,GAUNTLET,CRYSTAL CASTLE,INDIANA JONES,SPEEDBALL
METROCROSS,XENOX,BLOCKOUT,TETRIS,LEISURE SUIT LARRY SERIES
SHANGHAI,SPACE QUEST 3,MARBLE MADNESS,TV SPORTS FOOTBALL,PAC MANIA
KINGS QUEST,STAR WARS,CHAMPION WRESTLING,STAR GLIDER, AND MANY MORE!

I WOULD PREFER TO SELL THE ENTIRE SYSTEM AS A PACKAGE
I AM ASKING ONLY $700 OR B/O (+ SHIPPING FROM SAN FRANCISCO AREA)
WHICH I FEEL IS REASONABLE SINCE I PAID WELL OVER $6,000
FOR THE HARDWARE & SOFTWARE

IT HAS BEEN A GREAT SYSTEM, BUT I JUST DO NOT USE IT ANY MORE.
THOUGH I WOULD PREFER TO SELL THE ENTIRE PACKAGE, I WILL ACCEPT
ENQUIRIES ON COMPONENTS IF I GET NO TAKERS ON THE ENTIRE SYSTEM.

YOU CAN SEND ME EMAIL AT RJRE@AOL.COM

As of this writing date and time, (Hey, Friday night, 3:00am! You know how I just cut loose on the net! Woooohooo!)

it seems as though ftp.cnam.fr Atari archives have relocated to sunsite.cnam.fr. I was looking around and panicking, as I forgot my hitchhiker's guide, and took a look at the empty aminet archive. Remember Amiga? Once Atari's fiercest enemy in the cool computer wars, now a keen cult machine, also still being produced by clone makers, kind of like that wierd cousin you always really liked, but he was just too slick and hungry for attention, and he always tried to steal your limelight.

What? Get to the point? Okay. So, the aminet archive had the courtesy to put a readme file stating the new location of files. So, on my hunch (Wooohooo 3:00am!), I tried ftp://sunsite.cnam.fr, and lo and behold, there were the Atari archives.

I don't know if this is temporary or what, so I dunno about updating links. Just don't do ftp://ftp.cnam.fr, as this will connect you to brunner.cnam.fr, which has nada for Fuji Folks.

Just learn from my lesson, and take your HH Guide (and a towel) with you to sunsite, and don't panic, even if your weird cousin did tell that really funny joke at one point.

Gnight.
aardvyrk@cris.com

: Hi! Is there any emulator that would allow me to run C Lab Notator for
: Atari ST on my Macintosh? I HATE Notator Logic for Mac.

: Thanks,
: Jeff

I'm afriad not...as Notator requries a real Atari version of TOS above 1.00. It hooks directly into the true Atari GEM AES as well. The next problem is that Notator requires a dongle.

To my knowledge, the only ST emulator for the Mac is MagiC Mac. It's a total Revamp of TOS with a totally overhauled AES. The Mac doesn't have an Atari Cartrige port either. In a lot of ways, this TOS revamp is better than the origonal...but in terms of running programs like Notator, you're dead in the water, first because of the dongle, and second because Notator expects to find Atari's own GEM and TOS so it can hook up with it and use a lot of its functions in way that are not really legal in terms of writing software to the ST standard.

I can understand why you'd like to run Atari Notator...but have you looked at other Sequencers for the Mac platform? If you're looking for something small and powerful...with the older methods of working with midi events (more like notator), see if you can find the old KCS Omega for the Mac. Mark of the unicorn now owns the rights to old Dr. T stuff, and Mark of the Unicorn also has a line of their own sequencers that were born to run on the older smaller Macs, but should be no problem to run on the newer System 7 and up based systems.

Hope this helps...
Brian

>>> on the ST), enhanced joystick ports, in addition to the usual
>>> list of ST features.
h>> [...]
h>>
h>> ...and a BLitTer chip (Block Image Transfer) which speeds up
h>> screen redrawing.
s>
s> Ah, I thought the blitter was optional on the non-Mega STe.

AFIK the blitter was fitted to all Mega Sts, Stes and Mega Stes; later versions of the ST motherboard can have one easily(?) retro-fitted. In the Ste/Mega Ste the blitter is built in to the video chip so it's not likely that blitter was optional on the Ste ;-)

The Falcon has a 16mhz version of the blitter - pity Atari didn't stick it in the TT or Mega Ste :-(

Cheers
Mark

Hi Brian!

b> It's not that I want to be a tight wad...
b> I simply don't have any choice...
A nicely written piece.

Unfortunately we're victims to the small Atari market, so the economies of scale that are "enjoyed" by the PC market simply cannot be applied to us. That means that a large proportion of the cost of those PAK and video card adaptors must pay for R&D. It's bad luck, but with careful shopping you can get some good second-hand deals, I got an AdSpeed 16MHz accelerator and a Reflex graphics card for 45 UKP each for example.

As for your request for a graphics prog that will allow you to include text in a (colour) picture is PixArt, tho' ATM I can't recall which format fonts it uses, perhaps Signum! for which there are PD fonts around. Homa Systems are the Canadian distributors and have a Web site.

Speak to 'ya later!

2308. STOLEN????

Newsgroup: comp.sys.atari.st
Date: 1996-08-10 00:00:00 UTC
From: stosser@airtime.co.uk
Message-ID: <320c65fc.1568793@news.airtime.co.uk>
Source record: 140281

Anyone with a copy of the final ST Format issue 86 can read a review
of the "Maggie WWW page", It got a good review,complete with screen
shot and nice mention of colours and how it is set out, the Maggie
page consists of 2 large files all about the diskzine and its history,

This was all HTML'd by ME!, Tony Greenwood (STOSSER Software), it was
designed by me and all the layaout etc was done by me, the actual text
content was by the editor of Maggie Diskzine, Its in the well
advertised diskzine section of my web pages,

Yet it gets reviewed on someone elses page with someone elses url and
they then get the credit for all this,

OK it is easy enough to take a web page from anywhere, but surely the
whole concept of the web is to LINK to points of interest?, not
duplicate them,
I don't know how the page got there, I don't know who is responsible
and therefore am NOT accusing ANYONE?, But it is still WRONG!

But what the hell!, all the above doesent bother me really :), hey
its just one of those not nice things that happen, I will get over it
:)

BUT WHAT DOES GET UP MY F***ING NOSE IS THAT THE ONLY THING ALTERED
IN THE ENTIRE PAGES, WAS TO REMOVE THE LINK TO MY PAGE, THAT STINKS!

I have sent out appropriate emails, but no replies in a week?,

Am I being paranoid, or anyone else think this kind of practice is
well out of order?

Cheers.............!ynoT

>point, I doubt the idea of games is being bandied about anywhere over there.

Err, from what I understand, JTS is *not* going to be developing any
games or game systems, and AFAIK they never claimed that they would.

I think the point that BobKlaas was trying to make when he said it
would be "in our favor" is that the stockholders who were previously
invested in Atari now have a chance, at least, to recoup their losses
and maybe even make some money. If the majority of the stockholders
had preferred making games to making money, Atari would still be with
us today.

OK I have sent you an extensive list of possible educational titles
for the ATARI, Complete with small infos and score :)

However I have to comment that the educational software for the
ATARI is somewhat lacking, not only in quantity but also quality, no
disrespect to the authors, but the truth is that most of the edu
software made is quite old.....very good in its day, but showing its
age now,

Long before this posting:), I had already decided to change my
direction on ATARI software programmed, instead of making this that
and the other!, we (my artist partner and I) have already decided to
channel our efforts into childrens educational titles,
My current project will be finished and released in time for the
upcoming English ATARI shows, from then on we are going to concentrate
everything on educational software, my STOSSER web page will be
converted to education on the ATARI that not only tells you about our
projects, but will list all other edu titles available for the ATARI,
and where we can there will be links to download any software listed,
It will hopefully be the premier place to visit for Educational
software and information about educational software for use on your
ATARI:)

Cheers.............!ynoT

>no flames about pirating. I even asked Binary Sounds about it and they could
>care less about MIDIMAZE... I've tried the PD versions, and they lack the feel
>of the original, mainly having my butt kicked by the Ninja-class players...

Well, I've got a working MIDImaze which I'd be willing to sell.
I bought it directly from Hybrid Arts when they were in business, but they
told me that there was no more support for that program (but if I wanted, I
could *buy* an extra copy as a backup)....
As far as I know it's pretty hard to "crack". I wanted to install it on my
harddisk, but it wouldn't work without the disk :-(

Anyway, I've barely used the program, so the disk is almost as new, with
the registration card, user manual all in the cardboard "folder" it came
in.

If you or anyone else is interested, please mail me.

Date: 1996-08-10 00:00:00 UTC
From: slider@bertste.demon.co.uk
Message-ID: <839686090_OASIS_NEWS@bertste.demon.co.uk>
Source record: 140288

I have just purchased a Phillips CM8833-II Monitor.

I am asking for any help with software that will allow me to view colour jpg's. The monitor runs in medium resolution giving four colours. Is it possible to enhanse this to the 16 colours of a low res monitor?

I have read about a palette.cpx program to use with the control pannel, Xcontrol, to allow colours to be dithered. I'd appreciate any help with this and advise on where I might get a copy of the palette.cpx.

Or are there other programs that will view full colour jpg's and show them in colour on my monitor?

I have an STE 4meg machine.

Thanks for any advise.

Hi there SORRY about the Misleading sebject post!

But you have to read this!

I was looking for some information on Calamus 95, The PC version of
Calamus SL as we are buying a new DTP prg. at work and I was thinking of
this, as I heard the Documents were compatible from the Atari to the PC.
Does anyone know this for SURE!?

Also...!
Here's the most important part! I figured to get some info on it.. Well...
I'll hit the Calamus HomePage.. Where else would the info be that is
reliable, but when I clicked on my mighty link to their homepage..
I got something like this:

"DMC Calamus cannot support a HomePage, Please Call DMC for Info"

Talk about BUMMED!
Wonder why?

Oh well! Another Atari Link down the drain!

SeeYa

I> Some aspects of software quality do not become apparent until
I> after rigourous testing. Unfortunately, not enough people
I> complain about bug ridden software and demand their money
I> back. If this were the

RT> You /have/ used Microsoft products, then. ;^/

Computer software seems to be off in it's own little world. We've heard for decades all about what ticks software developers off.

Turn-about is fair play! :) I _don't_ advocate piracy. But I'm starting to see a lot more messages from software users. Whether it is TOS or Windows or Mac software - no matter. Those of us who use software are, finally, demanding _our_ due.

Good for those who complain about the goofy software, laws, & companies. More power to them! :)

Re: Piracy. It's wrong. However, I used to sell Atari computers, and the two best customers we had were heavy software pirates. Those 2 guys bought more software & hardware in a year than any dozen other customers we had. I've stayed in contact with one of them. He has a PC clone these days. Tells me he can get any Windows software I would want off the Internet. And he still spends more money on computer hardware & software than any sane budget should allow. :)

Pirates do steal software. What they do is wrong. On the other hand, they do end up putting a lot back into the computer world, despite themselves. :)

My point? Oh, hell, I never have a point.... :)

duky@worldnet.att.net barked in COMP.SYS.ATARI.ST on 09 Aug 96:

d> I thought Atari went out of business!

That's incorrect, and irrelevant to the discussion at hand anyway.

(1) Atari (the computer company) purchased a controlling interest in JTS technologies (the hard drive company) and merged, adopting the new name and abandoning "Atari" as a brand name.

(2) Atari computers and clones thereof are still manufactured by at least three firms; C-Lab makes the Atari/C-Lab Falcon, and the Hades and Medusa workstations also run TOS (the OS-in-ROM that is the basis for Atari computers).

And, assuming that there was no one still making Atari systems, there are still hundreds of thousands of Atari computers in existence and functional. The users of these systems are no less entitled to access the Interent than any other group.

>possible to enhanse this to the 16 colours of a low res monitor?

Eh? The Philips CM8833-II monitor runs in BOTH LOW and MEDIUM res!!!
Have you not tried to change resolution on your Atari ???

Change to low res, and you will get all 4096 colours..
A good program to view both GIF and JPEGs with is Speed-Of-Light..
But you need 4MB to view all JPEGs..

>I have read about a palette.cpx program to use with the control pannel,
>Xcontrol, to allow colours to be dithered. I'd appreciate any help with this
>and advise on where I might get a copy of the palette.cpx.

You dont need it.. Just change resolution to LOW and you will get all colours needed..

>might work, but since I have a LaserJet, there is a problem. I can't
>seem to get it to work with NO Gdos, Gdos 1.1 or SpeedoGdos 5.03.

I also use a laserjet (HP IIIP) and print directly to it. I set the font
on the LaserJet (from the control panel .. I usually set it to font 1 which
is compressed print and then in LDW Power I set the margins to 180 or so).
Be sure to set the page length to 60. That will print out straight ASCII
if you don't load GDOS. It is entirely possible your problem is not with
LDW Power, but with your ST (if you are using an old STf). The printer
port sometimes could not quite make it up the hill (the little train that
couldn't) with a laserjet .. The solution to that is to use an external
printer buffer.

>Also, don't you have to have some sort of Gdos installed in order for the
>graphs and charts to print? This was the main reason I got LDW.

Yes, you are correct, you cannot print graphs without GDOS installed (with a
laserjet printer driver in the assign.sys file .. Speedo or NVDI are the best
places to find one of those). BUT I thought you said your OPUS was doing just
fine .. you mean you got Opus to print graphs to a laserjet?

Again, if you can't get GDOS to print to the laserjet, it might be the printer
buffer (an external one) solution is needed again. I don't know if (or why)
you might be able to print to a laser from one program and not from another,
but I'd sure try that before I gave up the ghost. I generally use a TT (instead
of my STe or my MegaST2) and do not use an external buffer anymore (but that
is because it slows up printouts of PageStream/OutBurST). Normally a printer
buffer speeds things up, but OutBurST needs to talk directly to the laser.

hope some of that helped
George Iken
Houston Atari Computer Enthusiasts

ps.. make sure you don't have anything set in your printer setup on LDW power.
You can access that as /ppos I believe.

h{ I also use a laserjet (HP IIIP) and print directly to
h{ it. I set the font
h{ on the LaserJet (from the control panel ..

Well, the HP5L doesn't have any controls to speak of -- just a reset
button. It does, however have a bunch of defualt fonts stored in RAM.

h{ Be sure to set the page length to 60. That will print
h{ out straight ASCII
h{ if you don't load GDOS.

Yes, but, I would like to get it to print using some form of Gdos so that
I could print graphs as well.

h{ It is entirely possible your
h{ problem is not with
h{ LDW Power, but with your ST (if you are using an old
h{ STf).

I'm using a TT and I can print just fine from the desktop, from Works,
Calamus, Everest and Edith, even Opus 2.31! But no way with LDW. I have
tried no Gdos, Gdos 1.1 and SpeedoGdos 5.03. I currently have NVDI on
order from Toad, but they are currently out of stock, so I have to wait
for a bit.

h{ BUT I thought you said your OPUS was doing just
h{ fine .. you mean you got Opus to print graphs to a
h{ laserjet?

No, just the text output from the spreadsheet.

h{ Again, if you can't get GDOS to print to the laserjet,
h{ it might be the printer
h{ buffer (an external one) solution is needed again.

And you would suggest...?

h{ ps.. make sure you don't have anything set in your
h{ printer setup on LDW power.
h{ You can access that as /ppos I believe.

What's /ppos?

Thanks.

Yikes! Bit risky, this (depending on how it actually works). I would let
the OS sort it out.

>- Two bugs from: Stephen Mulrine <robotron@moroder.demon.co.uk> fixed:
> - If an outgoing mail message has a line beginning with a dot, the dot

Just for the record, this may not have been the case. According to the
SMTP spec, it should happen, but I've seen versions of sendmail which are
smart enough not to delete the dot if the next character on the line is
something else.

>- Defragging routines debugged.

Double yikes!

I have made a MagiCMac homepage (http://users.aol.com/zan660/mhome.htm) it is all about MagiCMac! If you are a shareware/freeware developer I will post info about your application and provide space for users to download it! I have two application up at the moment, I want to add as much as possible to make my site the best it can be. If you are or know a shareware or freeware developer who has an application I will post it ONLY if it works under MagiCMac.

Thank you,
Zan

>owners that wanted it's removal

I've been around here a long time and I can assure you that the old
binaries group went almost without postings for years.
Back in '88 there was some activity, but even then it wasn't much.

I don't remeber if I voted when the group removal was suggested, but if
I had, I would most definitely have voted YES.

Why, you ask?

1. Everybody with email has ftp access.
2. Everything that gets put on a binary newsgroup has to be archived
somewhere (read ftp site) as well or it'll be gone in a week or two.

>: These days it is _much_ better to upload software to a web or ftp
>: site and post an _announcement_ on one of the news groups!
>But it is not free, why should IBM users get all the free bandwidth they
>want and Atari users with none?

Uhm, in what way is ftp access less free than Usenet newsgroup access?

Usenet news distribution is _very_ far from free, while ftp only takes
net bandwidth for actual accesses.

The huge number of IBM users makes distribution via Usenet a lot more
defensible. It might even save bandwidth if a large enough number of
people want the files. That'll never be the case for Atari users.

>: Really, such a group is just a waste of the little bandwidth it
>Well if it produces little bandwidth then what's the problem?

Why don't we create 20 new Atari newsgroups?

bm>
bm> The subject says it all... You Atoyi loyalists are little more than a
bm> pack of losing bastards. So Bite Me and stuff your TTs, STs, Falcons,
bm> and Jags.

Perhaps you're correct. However, I think I'll let the postmaster@ewu.edu
make that decision. You see, I'm such a loser that I can read all of the
headers of any email or news article, and discover where it came from, even
if you disguise your email address (as you clumsily attempted to do).

By the way, spoofing your email address is a violation of the terms of use of
every service provider (including educational institutions) that I have ever
heard of; you'll probably be saying "goodbye" to your account on Monday.

> are would be available using these types of higher speeds????
> E-mail advice would be greatly appreciated, since I don't visit here that often.
> graphic@delphi.com

Humm... I don't have a 1040 but on my Mega ST I was able to acheive 14.4
connections and after installing the serial patch program (I forget the
name of the files) I got it up to 19.2 on my 28.8 modem. You might want
to check with your local dealer if he can do the hardware modifications
to the serial port which will let you do 38.4 I believe.

Later,
Sam

Hi ...

Is there anybody who can tell me if and how I can connect a 4 Mbyte
PS/2 Simm to one of my old STf's ?

I would have to remove the old chips first - I know. But that's no
problem (I hope) :-).

Basically I don't know if those modules allow acces of single bytes
and, if I could connect datalines 0-15 with 16-31 (I guess I have to
do this, since Atari's bus is only 16 bit wide)

any ideas welcome

> them know!

I have heard of this service before and was wondering how "free" is it?
I'm assuming that they might tack on some adverts, but I'm not to sure
exactly how the system works...

Anyways, were can I get more information on this? Maybe I can get a
second e-mail address that can let me get downloaded files from ess-coded
stuff.

Oh yes, it should be easy to port an ST front-end if Juno uses some
ASCII characters to exchange the stuff. Methinks hackers no much more
than marketing who say "According to our graphs, 'everyone' uses only
PC's" :)

I think I may have found that out Uwe. I put more than 32 Mb into the first partition (the 64Mb partition on the EZ135) then carried it over to the TT and when I read the partition, it seemed fine. Then I added one more file from the TT and it turned the directory into garbage listings. I had to repartition the cart on the PC (wiping out the data) to bring it back. Sooo.. nothing bigger than a 30Mb partition for me from now on.

Bob,

I primarily use the TT030, with the SCSI port. But I have also used the DMA on my STe, running through a Supra host adapter (but with ICD Pro Utilities).

There is a user group in StPaul (SPACE). I just received a newsletter from
them yesterday (it's downstairs, so I don't have it just with me). Let me
know if you need the address.

Mark,

You will need a SCSI host adapter (ICD LinkII is basically a complete adapter and cable all in one) which connects between your DMA port and a SCSI hard drive. you will probably also need a powersupply for the drive, so an external Macintosh drive, or a Syquest EZ135 or equivalent external SCSI drive might be your best bet. IDE drives can be used with a new (I've never seen one) interface that connects through the cartridge port .. but I'd recommend the ICD/SCSI method which has been used successfully for nearly the full 10+ years of life of the ST line.

BEGIN -- Cut Here -- cut here
Here is a listing of some of the computer stuff that I have to dispose of. If you are interested, E-Mail me at rsdean@accessnv.com or at the Ground Zero BBS (Gunner) at 702-435-6782 FNET
Node 189. Everything works and has it's manual unless otherwise noted. You pay shipping. Money order up front required. Some negotiation possible for LARGE purchases.

FOR SALE

ATARI ST - HARDWARE

SF 354 SS/DD Disk Drive-- $20
ISAC High Res Graphics Card (Mega ST) ----------------------------$100
520 ST (Wounded, good for parts or repair only) ---------------------- $10
IB Drive 5 1/4" Floppy for DOS emulation ---------------------------- $20
Migraph Hand Scanner w/Touch up software ------------------------- $75
Super Charger w/MSDOS 4.01 -- $75
ST Pictascan Scanner (mounts on DM printers print head) ----------- $15
Computer Eyes ST (Color) --- $50

ATARI ST - SOFTWARE

Calamus 1.09 --- $35
Calamus SL --- $100
Calligrapher Gold -- $ 50
Font GDOS -- $ 5
Word Perfect Atari --- $25
Mean 18 Ultimate Golf -- $ 2
Timeworks Desktop Publisher ST ------------------------------------- $25
Timeworks Data Manager ST -- $10
Timeworks Word Writer ST --- $10
Fleet Street Publisher v3.0 -- $25
Image Copy 4 --- $20
Mercenary - the second city -- $ 5
Label Master Elite --- $10
Dbasic (very fast basic programming language) w/manual ------------- $10
Teacher's Pet (grading & student tracking program) ------------------- $10
Sim City --- $10
Harrier Strike Mission (doesn't work w/tos 1.04) ---------------------- $ 1
ProCopy v1.3 (no manual, you don't need one)-------------------------- $ 1
Shadow (background file transfer for Flash!) ------------------------------ $ 1
GFA Basic Compiler w/manual & GFA Basic manual ------------------ $10
Degas Elite -- $10
Music Studio 88' --- $10
Atari 1st-Word (Manual on disk) -- $ 2
Universal Item Selector v2.01 (no manual) ------------------------------ $ 2

HabaView (Information manager) ---------- $ 2

What I meant is that perhaps more than one new printed magazine would be better for the Atari UK community than just one dominant force deciding what the Atarians do and don't want. It was never meant to get anyone wound up, it was simply a question - nothing more - as I want to guage some feelings as to whether a magazine is wanted.

I've now had about a dozen responses to just those two postings - but if I were to go to print I would expect over one hundred subscribers I'm sure.

Your magazine sounds very interesting, and I'll be sure to get hold of a copy. Hopefully we can keep in contact about our intentions. We are, after all, both on the same side. So, please do e-mail me regularly to tell me what's happening.

I'll look forward to hearing from you again soon.

> Sorry, but I believe in computers as machines to make our lives easier. I don't believe in using my ST just for the sake of it and when I have access to a PC with internet access it would seem nonsensicle to spend time and money getting my atari on-line. I must admit thought that the name Microsoft does make me cringe somewhat.

Best wishes, Matt.

I'll be sure to check out your latest edition as soon as I get the chance,
but no I didn't realise you were still going.

The original idea was a printed UK-based ST magazine. Please e-mail me if
you, or anyone else, would be interested in this.

Thanks, Matt.

EM> while, but my brother has a 1024 STf(m) I want to upgrade. I'm
EM> not sure which version of TOS it has. And if TOS 2.06 does not
EM> work, which version does?

Hi Edgar,
I don't know of any dealers in the Netherlands, but maybe someone else does?
The STfm can't be upgraded further than to 1.04, which is also know as "Rainbow
TOS", if you don't have a special adapter card that needs to be soldered onto
the CPU. I don't think this adapter card is available anymore :(
If you want to upgrade easily to 2.06, you need an STe.

Best regards,

Claes

Hi James,
You've got bad clusters on the HD. If the problem is only on one partition, you
will probably get rid of it by zeroing that partition. If you're out of luck,
you may even have to reformat the HD :(
You could also try using CHKHD3 or Diamond Edge, but do make a backup first!

Best regards,

Claes

I did that sometimes just by using a normal editor e. g. Everest. Just use
"search" and "replace". Search for "<*>" and replace with " " (nothing).
This will delete all the html-tags. Off course there's no formatting, no
headlines etc. - I don't know if there's any programe able to do that sort
of thing.

2376. Where to purchase Protext

Newsgroup: comp.sys.atari.st
Date: 1996-08-11 00:00:00 UTC
From: tparrett@parrett.fast.co.za
Message-ID: <839859940_OASIS_@parrett.fast.co.za>
Source record: 140245

I'll be visiting the UK shortly and would like to know where I can either purchase the latest version of Protext (6.x ?) or at least an upgrade from my current version (4.3). I understand it was handled by Arnor who then passed it on to Compo. After that ????????.
v4.3 runs well but the config prg crashes on my Falcon. I did hear that Protext is to be issued as shareware but haven't come across this so far.
Any help would be appreciated.

2377. NVDI 4 AND LOGIC

Newsgroup: comp.sys.atari.st
Date: 1996-08-11 00:00:00 UTC
From: tparrett@parrett.fast.co.za
Message-ID: <839864744_OASIS_@parrett.fast.co.za>
Source record: 140246

Can anyone advise if NVDI 4 is compatible with Notator Logic. I use NVDI 2.5 with Logic and on a trip to the UK a year or so ago I upgraded NVDI to v 3.0. That was a mistake as v3.0 is not compatible with Logic (or vice versa). I'm about to make another trip to the UK and am thinking of upgrading NVDI 3.0 to v4.0. I would appreciate hearing from a user in case I again waste my money !!.

2378. ??? 9600 baud highest STe Modem transfer rate ???

Newsgroup: comp.sys.atari.st
Date: 1996-08-11 00:00:00 UTC
From: graphic@delphi.com
Message-ID: <5ZDQ4Zh.graphic@delphi.com>
Source record: 140247

Is 9600 baud via the serial port on an Atari 1040 Ste the best that can be
achieved with a modem connection to a commercial service provider/internet
site??>
Any tricks using the MIDI Port or any other way to get to 14.4K or 28K???
are would be available using these types of higher speeds????
E-mail advice would be greatly appreciated, since I don't visit here that often.
graphic@delphi.com

Quite simply read the docs, many of the programs which modify the
system and the like hook into the systems vectors, some programs are
not happy if another program has already used that vector and so will
cause instability. If what you have works then stick with it!

>2nd question:
>~~~~~~~~~~~~
>How should I set the flag for tsr and the accs. I am using superflag.
>But for that kind of prgs the flags are difficult to configure.

I completely ignore them, they make little difference and rarely need
to be modified by the user.

If you haven't got NVDI, you can use a cpx called SYSFONTS which I
found at either Umich or Paderborn. It's in German but not too
difficult to work out.

Harlekin also does this (I used it until I switched to using cpxs).
Sysfont uses the font I had in Harlekin (exported from Harlekin's font
editor as a GEM font), but without such a memory overhead.

Does anybody have the pin-pin connections for a Lead to connect a ST to a TTL colour monitor with a 9way D-type socket on????

Any help very gratefully received......

2382. ** MiNT Distrib: HUGE PROBLEM!! **

Newsgroup: comp.sys.atari.st
Date: 1996-08-11 00:00:00 UTC
From: garn9114@kutztown.edu
Message-ID: <4ul8dg$7rq@jake.esu.edu>
Source record: 140251

I'm having a huge problem with the MiNT Distribution kit on my
Falcon. It seems once I get everything set and ready, just when the
program gets ready to start copying from floppy I get two bombs. This
was after playing with it for a while. Before, I couldn't set it up with
Minix or Multi-Mint without it bombing. I had to use Tos FS and Mint/Gem
in order for it to get that far. Furthermore, the help files bring up a
lot of garbage Ascii figures and then bomb out. I downloaded the file
twice and retrieved it from umich again to make sure it wasn't a problem
in the download. Does anybody have a clue what the problem could be?
To assist in helping, here's my system config: Atari Falcom 030
running Stik, Deskpic, Overscan, & SpeedoGDOS.

Please respond via email, as I don't have enough time to check
this group as often as I'd like. Thank you in advance for any help you
can give me,

George Garner

The *BEST* but not cheapest way to do this would be to buy NVDI, it's
upto V4 at the moment but V2.5 is also great and is available for
something like $30. It uses an improved version of GDOS rather than
Speedo GDOS like the others and also speeds up your graphics by about
300%.

Luke Drelick (duky@worldnet.att.net) wrote:

: I thought Atari went out of business!

Yes and no. Just because Atari went gone, or not, doesn't necessarily mean that we don't get any more support from anyone. The old 8bit systems no longer had support at all from Atari, but there is still support for it via user groups and then some. Same with the ST systems and so on. Look at the Commodore systems, the TI systems, and so on. Who gives it the most support right now? The users. Don't knock them til you've tried it.

I'm not about to start a "my computer is better than yours" war, neither do I want to see one. I'm painfully aware of a certain subject title like this back in the mid-80s when it nearly killed the backbones of the other systems on the network.. I see it nearly all the time here, with those clueless idiots who don't even know where the message is going, much less how to post a good message.

In essence, Atari is still around, alive and well, in our hearts.

I can't, because Steinberg still make bug-fixes and you can still upgrade to
the higher levels or even cross-grade to other platforms' versions if that's
what you want. So in fact there is still no reason to use pirate versions. And
it STILL is illegal!

John Perez wrote this to All about Cubase 2.0 (or higher) 'cracked' version
Most entertainment software that is copy protected runs on
JP> only a small percentage of computers. After buying games like
JP> Vroom and Dragon's Lair, I was quite dismayed that my original
JP> disks only worked on 10-20% of the STs that I had access to.
JP> Even when these programs did work, they didn't work
JP> consistently. Games like Epic and Robocop 3 which would only
JP> run about 50% made me wish that I had kept my $70 per title.
JP> Honestly, I have at least 100 games that have difficulty
JP> running, or do not run at all.

Every program I've bought has worked fine, so I guess you've got either some defective drives or some of the programs don't work on all TOS versions (the safest games TOS has been 1.04). Some programs have had a copy protection that's located above track 79 and that means there are some disk drives that can't run the programs since they're not able to access the protection (if I remember correctly, Epson drives are the best if the copy-protection is located on high tracks). This has to do with Atari not buying parts from the same manufacturer all the time and the programmers haven't even been aware of this until customers have complained about it.
TOS version problems are always the programmers' fault, since it indicates they haven't followed the rules set by the hardware developer and in these cases there is no excuse.
Sadly, the copy protection is necessary to stop some of the pirates.
Without copy protection there would hardly be any programs sold.

JP> I literally have at least 10 carts that I need to be able to
JP> use. The inconvenience and wear and tear on my ports is
JP> unjustified, especially considering the excessive price of
JP> these software packages.

There are cartridge extensions available that either let you have many carts inserted at the same time or let you change cart without switching off. If you have that many cartridge protected programs, these solutions are in fact a very cheap way of keeping the wear down. It would be cheaper to replace a worn-out extension rather than repairing the computer.
A comfort is that many of the cracked versions don't work as good as the original...

JP> When is someone going to figure out
JP> that you can sell ten times as many pieces of product at $100
JP> than you can sell at $500? The bottom line is that I paid
JP> huge quantities of money for these programs and I deserve to
JP> be able to use them without difficulty.

The sad fact about it is that it can't sell more, because of the piracy. The honest people, like you and me, still buy the software, while the dishonest try every way possible to get it for free -even if it barely costs anything. Ask the shareware programmers how many of the users actually register - and there are very many cheap, but professionally made shareware programs around...
I will continue buying the software I use - regardless of protection or price - as long as I need it for the things I want to do with the aid of my computer.
Best regards,

Claes

Nope. 19200 baud is the max rate of a standard ST/STe, but with
modifications you can get up to 115200 baud...

For Sale: Atari 1040ST computer needs a new floppy disk drive, Atari
SM124 Monochrome monitor, Boca 14400 baud fax/data modem, IB Drive with
a ten pack of 5.25 inch disks, Golden Image Mouse, Assorted software,
and some other stuff. Asking: $100, includes shipping and handling.
I don't want to split this package up, shipping will cost me more...

Please call (423) 928-1071 as Email will be off line for a month
or longer while they try to install a new internet connect system.

2400. Desktop.inf tips Web page

Newsgroup: comp.sys.atari.st
Date: 1996-08-12 00:00:00 UTC
From: tjh@ic.net
Message-ID: <tjh-1208961340210001@p30.hubbard2.t.ic.net>
Source record: 140119

Ever wonder what was lurking in that DESKTOP.INF or NEWDESK.INF file? Ever wonder how much you can customize the Atari desktop? This Web page has the answers. I wrote this document a couple of years ago and put it on the GEnie Information Service. Now I've HTMLized it and put it on my Web site!

This page will show you some of the things you can do with the Atari INF files. It then walks you line by line though the INF file, telling you what each line is for. Finally it provides you with a fully annotated NEWDESK.INF file, so you can see for yourself what can be done and strike off on your own.

With this information you will be fully ready to customize your Atari's desktop, whether you own a 520ST or a Falcon! You'll have full control over your desktop, without relying on a lot of utilitizes and AUTO programs.

Check it out and let me know what you think.

Does anyone know of Michel Forget of ESSCODE and shadow Term fame is still supporting Shadow Ternm? I've been trying to contact him at the address mforget@elfhaven.ersys.edmonton.ab.ca for several weeks. The msgs don't bounce so I assume they're logging into a mailbox in Edmonton, AB.

I'd like to know if he has produced a version of Shadow Term more recent than vers.2, July 1, 1992. I'm interested in registering for it, if it exists.

Info would be appreciated.

Hi all..!

I need 40meg or bigger hard drives.
The bigger the better!
Must have the 20 and 34 pin configuration (not the 50pin drives)
And must be ** WORKING ** (not too many bad sectors)
Actually I'd prefer bigger then 40 megs drives but if that's all you have!
e-mail me with the price / size / where you live / and type of drive.

Thanks!
Johnny

My read on this is that you are using the original MDK. Mint in this kit is version 0.95, very very old. Some of those bits will come in handy, file/text utils and such, but the SETUP/INSTALL proggy probably doesn't work on an 030. I get two bombs on my TT as well. To get around this I installed the TAF distribution (Check on HENSA to find it.). From there, I manually added bits and pieces from the MDK as needed/wanted.

The TAF distribution is primarily aimed at WWW using Mintnet, X-windows and a web browser called Chimara. Because it is X-windows for Mint, it's in monchrome only, but if all you want is Mint, just remove the X-stuff and add a copy of TOSWIN.

I'm sorry I missed the original post, but perhaps I have something to offer. If I read this right, someone's thinking about puting the old Atari mags on the Web? If so, I have access to a potential gold mine.

My father has all of the STart magazines (with the exception of two early ones: issues one and three, I think) and a whole box of the old Antic mags, including all the ones that contained the Atari ST section (precursor to STart). The disks for all the STart mags are still in a disk case, and most should work, so it might even be possible to put those old programs on the Web. It might not be entirely legal, but who's to argue? It'd be a shame for all of that excellent software to disappear. You would, of course, have to be judiscious in putting former commercial titles up. Anyway, STart never really owned all of those programs. I know for a fact that they never payed for the programs published in the last half-dozen or more issues of STart; they still owe me a couple hundred dollars.

If the person who's doing this project would like these magazines and disks, I'm sure my dad wouldn't mind unloading them.

Regards,

Tom

Claes Holmerup (claes.holmerup@p5.dada.ct.se) wrote:
: JP> Honestly, I have at least 100 games that have difficulty
: JP> running, or do not run at all.

: Every program I've bought has worked fine, so I guess you've got either some
: defective drives or some of the programs don't work on all TOS versions (the
: safest games TOS has been 1.04). Some programs have had a copy protection

In general, I'm sure that the copy protection that I have had most trouble with is the type that only works with certain types of disk drives. I personally have owned 5 Atari ST machines, and each of them have had plenty of problems with these games. My roommate has an ST, both of my brothers, several friends of mine, etc... whether one of my games will work on their systems is always hit or miss - there is sufficiently justifyable reason for that. How would you feel if you bought a CD of your favorite musician, but it wouldn't play in your CD player? Would anyone put up with that?

: Sadly, the copy protection is necessary to stop some of the pirates.
: Without copy protection there would hardly be any programs sold.

I agree that some method of copy protection is necessary, but there is really no method that hackers cannot get around. I believe that in the Atari market, companies went way too far trying to prevent piracy, and really ended up taking out their frustrations on the consumer. Everything from joystick dongles, cartridge dongles, laser burned diskettes, and more. Not to mention, all of the custom formatted heavily protected disks ended up being even more prone to failure than regular floppies. One little flake from those precarious iron oxide coated disks, and a $70 game was now a nice coaster.

There are more reasons that the Atari entertainment software market died, however.

1. Games being released without the features that were included in the ports available on other platforms.
ex. Several titles (Ultima VI?) that had MIDI music support on the PC, had this stripped from the ST version - for a computer that actually HAS MIDI ports, this is inexcusable, and insured that I wasn't going to be interested. Also, many games were released without head-to-head modes that were available on the other platforms.

2. Games that needed to be hard drive installable, but weren't.
ex. Microprose Grand Prix - an apparently excellent game, but far too frustrating to try and play because of the constant

switching required of 4 disks. Also, Robocop 3- nice game,
3 disks... Robocop 3, by the way, had in manual copy
protection AND severe diskette protection. Both of these
games were hard disk installable on the PC.

3. Games that were just plain bad.
ex. Plenty. Many game companies release poor titles, and then
blamed poor sales on piracy. People don't want to play bad
games, even if they don't have to pay a dime.

: JP> I literally have at least 10 carts that I need to be able to

: There are cartridge extensions available that either let you have many carts
: inserted at the same time or let you change cart without switching off. If you

My point is that I already paid a lot of money for the programs - these
kinds of extensions should have been included with the offending software
packages. I already have over $2000 invested in music software alone,
where does it end?

: JP> When is someone going to figure out
: JP> that you can sell ten times as many pieces of product at $100
: JP> than you can sell at $500? The bottom line is that I paid

: The sad fact about it is that it can't sell more, because of the piracy. The

I can't agree with that. If audio CDs sold for $100 each, how many CDs
would you own? I might have two or three. Currently I have a huge number
of CDs, probably thousands of dollars worth - the point is that it is
easier to spend larger amounts in smaller increments. As long as games
are $70, and music is $15 - music will always outsell software.

People always say "Oh, but the audio CD market is much bigger than the
Atari game market" - I say, a market is what you make it. If mediocre
games that rarely function properly sell for $70, the certainly few people
are going to buy them. If good games sold for $15, the sales would be
very different.

: I will continue buying the software I use - regardless of protection or price -
: as long as I need it for the things I want to do with the aid of my computer.

And I will do the same - I will pay regardless of the price or the
hassles, but I won't be happy about it. More importantly, I will be in
the minority, because most consumers will not put up with this kind of
nonsense. This is, after all, supposed to be a comsumer driven market.

Aloha,

John Perez

g> graphic@delphi.com

You don't need the MIDI port for a 14400 modem; the standard AUX port
supports 19200, which, while not blindingly fast, is adequate for maintaining
14400. If you get a 28800 modem, you'll need to modify the serial port using
the information present in 38400.LZH (mentioned here in the newsgroup
recently). Without modification, you'll be able to get 19200 connects, which
is faster than 14400 but not as fast as your modem can go.

It sounds like that the AOL software is not multitasking friendly.

Here's the low down on this multitasking bit, it's just the computer switching between programs in it's memory after a certain amount of time. Only it's too fast for us so it seems to all be at the same time.

Pre-emptive is the switching between programs is at a forced set of time which the OS handles such as Magic and Windows 95.

What Macs use is coopertive switching is when if the applications makes plenty of frequent calls, the programs switch around. Netscape, a telnet window, and whatever Mac application you're running should mutlitask fine barring the limitations like memory that can crash the Mac.

So...while normal Mac programs can multitask good enough to not have any noticible lagging, it seems that this AOL program won't make ay of the right calls. Darn well stupid if you ask me!

As for why bothering to run CAB under MagicMac when you got Netscape, I guess it wouldn't matter if you get the 256-color graphics from the Mac hardware unless you have to see the pretty moving pictures :)

I'm using a 200 MB Syquest with only one big partition. I formatted
the cartridge with SCSI-Tools.
In the manual is a description about the mentioned problem:

"GEMDOS can cope with 32766 logical sectors, since TOS 1.04 it can be
doubled, but Atari won't guarantee that it's working."
This means 16 Mbyte per partition, 32 Mbyte under 1.04. If you want
more, the logical sector size is increased from 512 per sector up to
8192 bytes per sector which gives you ~255/511 Mbyte per partition.

If you tell SCSI-Tools to use more than 32766 lgs, the program marks
cluster number 32768 as bad. The manual says, if this cluster is
marked as bad (or is marked "used") there will be no problems any
more using more than 32766 lgs.

Maybe Uwe can tell us more about that :-)

I'm a CAF/16 user, with 16 megs, Jam-8 (good sound), FDI, etc.

I'll be buying a bigger hard drive for my Falcon (to run Cubase Audio), and I have some questions for those who are running larger drives on the Falcon:

1) Is there a maximum hard disk size that the Falcon will recognize? I already have 1 gig, and have seen 2.9 gigs for around $350.. that's four gigs. Will it work?

2) Does the hard disk driver affect this? I'm using AHDI right now, but I'm willing to change to HDDriver now that it seems the Cubase Audio offline problems are fixed.

3) I know about the Quantum Fireball incompatibilities, and I'm staying away from all Quantum drives for that reason. But are there any other drives that people KNOW will cause funkiness?

Thanks for any help you can give me.

Ah, I see part of the problem. UDP is (according to Hewlett-Packard) an
"unreliable protocol." If demon is using UDP for mail and/or news, I can
understand why you would have problems. What I can't understand is /why/ they
would use it in modern times.

Any analog monitor that can sync to 15.75kHz will work; the NEC 3D is the only one I know by name, but there are several others that were made by Princeton, Sont, and Acer, to nam a few. As far as I know, there are no VGA or better monitors still in production that can sync down to 15.75kHz (31.5kHz is the lower limtie for VGA), but rebuilt and used multisync monitors that work with the ST (and might also with the 800-series, with appropriate cabling) are still around.

Likely he has the permissions set wrong - the command from unix to allow full
read and write access is chmod 777 - if that's not what he wants to do, then
he needs to type man chmod and read the documents.

Well, thank heavens for that.

Someone I know found a cracked copy of Cubase VST (somewhere on the 'Net, he says) but luckily it doesn't run
properly on his under-resourced Mac. And here he is hassling me about my PC, on which Cubase Score 3.01 runs
beautifully. (More bloody flamebait! ;-))

What goes around comes around, I guess.

What's Steinberg's official position on the seeming proliferation of these 'cracked' packages? Why do us
honest, EULA-keeping users have to pay for these hackers?

Murray.

Yes, I noticed that too. I just checked it out and the new address for
Cnam is:

sunsite.cnam.fr /pub/Atari/ (IP 163.173.129.5)

I'll be adding it to my FTP site list at the end of the month.

I've also been notified about a mirror site for Cnam. Haven't been able to
check it out though. Either it's extremely slow or it's overloaded..
anyway it's (unverified):

ftp.gui.uva.es /pub/atari/ (hmmmm... perhaps /pub/Atari/ ??)
(IP 157.88.36.190)

Just make sure that the program is not compressed with a packer (if so,
you can just unpack it with mega-depack or whatever) and load it into
your favourite sample editor (I use Atari's "system audio manager"). Then
play the entire program at say 12.5KHz and listen for where the samples
are. Then just cut/paste/save the samples you want. Once you get used to
doing this you can actually tell where the samples are by the shape of the
waveform...

Oh yeah, this method works on getting the sounds out of mac & ibm programs
too... :)

I use an alternate with NVDI but it's not possible with others in the same way. It can be done with QuickSTe/Warp 9 with the ACC (ISTR) and there are other utilities like Fontswitch (part of the Fontkit Plus suite).

k> Hi guys, I am really confused about few little things.
k> First: I would like to know, what is a good order in the auto folder.

It's a good question and it's often a problem, but I'm not sure there is a
good answer to this tbh. It depends what you run with.

For example, my own running order is:

REDIRECT ; redirect screen output to graphics card
MAGXBOOT ; Magic (forces reboot)
XBOOT ; Boot manager
NVDI
LETEMFLY
DRVIN
SCC
STFAXMGR
DMIRROR
CHK_OFLS
ADDMEM

It works for me...

k> How should I set the flag for tsr and the accs. I am using superflag.
k> But for that kind of prgs the flags are difficult to configure.
k> Is there any rule?? Like don't set the Fast load for acc or Tsrs. Or
k> set the acc with the private flag and never from fast ram. Or whatever.

The only one I know is to turn off the Fastload bit for the first accessory
and last Auto folder prog (I think, but who knows...). AIUI ST-Guide
particularly needs the fastload bit switched off.

2444. Craziest of all STiK Problems!

Newsgroup: comp.sys.atari.st
Date: 1996-08-12 00:00:00 UTC
From: ac_green@bruny.its.utas.edu.au
Message-ID: <4umgdi$ioq@franklin.its.utas.edu.au>
Source record: 140185

Having made contact with all the relevant people in the maintenance side of STiK, I thought I'd try and find out if anyone out there is experiencing a similar problem to me.

STiK will connect and run Antmail, Forecast, Telnet and CAB (with images turned off and if I don't download binaries) fine. MG-FTP will run fine as long as I only download text files (takes a lot of the fun out of the net really). My problem is I can't download binaries any larger than 0.5kb.

I have had lengthy coresspondance with my provider, Dan Ackerman and Nick Flintham and we all have suspicions but cannot be certain what is wrong. We are beginning to believe there might be a small bug in STiK but are not sure.

The purpose of this posting is to find out if anyone else is connected to the following type of server using STiK.

If you are connecting to a machine running;

Xylogics Annex-III Terminal Server Revision 8.0

please e-mail me!!

My e-mail address is ac_green@postoffice.utas.edu.au

If you are connectted to a machine running this software I would really like to hear (a) whether it works, (b) how stable it is (c) does it exhibit the same problems I am experience and (d) what your DIAL.SCR and DEFAULT.CFG set up files are.

My provider assures me that hundreds of users are using SLIP on my IP service and Nick,Dan, my provider and myself have (a) gone through my config files and (b) ensure all the correct serial port drivers are installed on all three of my Atari's (two ST's and a Falcon). All exhibit exactly the same behaviour.

Hope to hear from you soon,

Anthony

2445. Re: Atari Falcon & Tower Cases

Newsgroup: comp.sys.atari.st
Date: 1996-08-12 00:00:00 UTC
From: bmerik@worldgate.com
Message-ID: <4umjv3$3m5@valis.worldgate.com>
Source record: 140186

The Falcon motherboard is too big to fit in anything less than a full tower, and even then it's a pain. (The PC PSU and the full width drive bays take up lots of real estate!) Look for an extra wide case, and be prepared for lots of fooling around!

1) None of the ports on the Falcon motherboard remotely line up with any ports on any standard PC case.
2) You have to source connectors and extention cables for every port you need....Let's see....serial, parallel, monitor, SCSI, MIDI, DSP, mic in, headphone, LAN.... oh, and you need some sort of keyboard/mouse interface like a DEKA.....

3) You also have to make sure your hook-ups to the PSU are properly wired, or you'll damage your computer. Do you feel lucky?

4) You pretty well have to design and build a sub-chassis to mount the motherboard in a PC case, as hardly any of the mounting holes on the board line up with the framework in a PC case, let alone holes!

Do yourself a favour, buy a pre-built unit. Don't re-invent the wheel, unless of course you're into anguish. I sprung for a Wizztronics Falcon Rack, and I'm very happy with it. It comes with all the bits you need.

Bill

Have at look at the HDDRIVER WWW pages.

http://acp5.chemie.uni-kl.de/seimet/hddriver_english.html
http://acp5.chemie.uni-kl.de/seimet/hddriver_german.html

On these pages you find information on the most recent changes in
the HDDRIVER package.

From: Ali@land.demon.co.uk
Message-ID: <839921298_OASIS_@land.demon.co.uk>
Source record: 140189

Hi all,

About a month ago I posted a request for help to get 1st Word to work
with the DJ600. I couldn't get it to print on the last 4cm of the page.
Thanks to all who offered advice I managed to get a working printer
driver cobbled up.

However I still experience the same problem with Timeworks 2. Really
annoying when printing in landscape!!

So Does anyone have a Timeworks driver for the DJ600?
or Does anyone know how to write a driver for Timeworks?
or Can anyone tell me of a good DTP package which supports the DJ600.
If so... how much will it cost and where do I get it.

Many thanks Atari chums,

Ali.

> somewhere (read ftp site) as well or it'll be gone in a week or two.

I thought that was the idea - that it be expired. That way it does not
take up permanent space like ftp.

>>: These days it is _much_ better to upload software to a web or ftp
>>: site and post an _announcement_ on one of the news groups!
>>But it is not free, why should IBM users get all the free bandwidth they
>>want and Atari users with none?
>
>Uhm, in what way is ftp access less free than Usenet newsgroup access?
>
>Usenet news distribution is _very_ far from free, while ftp only takes
>net bandwidth for actual accesses.

A suitable killfile can allow announcements only through. Of course,
there is no need to subscribe to the group in the first place if you
are not interested.

>The huge number of IBM users makes distribution via Usenet a lot more
>defensible. It might even save bandwidth if a large enough number of
>people want the files. That'll never be the case for Atari users.

To my mind, this is reverse logic. A huge number of postings equates
to a huge amount of data, most of which will be ignored. This is a
good reason for forcing high bandwith groups into using ftp, not low
bandwidth ones.

Using you own argument, if all this is to be archived then what
difference does one or two postings for atari make?

>>: Really, such a group is just a waste of the little bandwidth it
>>Well if it produces little bandwidth then what's the problem?
>
>Why don't we create 20 new Atari newsgroups?

'cos then I'd have to keep scrolling up and down my group list and it
would make my arm ache. :-)

Yes, there probably will be an initial flurry of postings then
comparitively few after, but perhaps one thing has slipped people's
minds - Nos can bomb or corrupt on posting. Folks know how to get
round this now, so I reckon there will be more than before.

Certainly. If you want to see how far things have progressed have a
look at the MagicMac demo. This enables a Mac to run the pre-emptive
multitasking OS MagiC, which in turn is compatible with any well
written Gem program.

Hi there!

Gozerito Gonzales (gozer@mcn.net) wrote:
:
: Does anybody out there know if it's possible to change the standard
: desktop font in TOS 2.06? It gets a bit annoying on the eyes after a few
: hours. :)

Yes it is possible even for TOS 1.0. It does require that you run GDOS or
something that provides GDOS functions to the desktop (like NVDI). You
will need to collect the fonts from elsewhere because there are no extra
fonts built into the Atari ROM, just the system one :(. If you are keen,
you could also play with the GDOS fonts to create your very own font(s)
as I have done. I use NVDI 3 and have changed the fonts to suit how I
want them to look. I use a freeware program called EDIT_GDF.PRG to edit
the fonts. You can get fonts from the ftp sites and probably get GDOS
from there too...

Hope this helps...

Great prices for a lot of great Atari equipment!

All software comes with manuals and, in most cases, original boxes.
Of course, some of it never came with a box in the first place...

All software and hardware has been tested (used fairly often,
actually) and worked at the time.

All magazines have lots of reviews, articles, and disk-based mags
have software, some of which is not listed.

Add shipping to all prices. Orders of $100 or more receive a 10%
discount.

Prices and terms are _flexible_, so make me an offer!

Questions? Ask away!

Please send all offers and inquiries to the following address:

tjh@ic.net

Tom Hopper

System

ITEM	PRICE
Atari SM124 Monochrome monitor w/cables	65.00

Hi...

I am attempting to put together a WWW page that features Educational programs for the ATARI user, Hopefully when finished, this will be the premier place to visit for all your Childrens learning software,

If you have any info on this subject then can you please email it to me,
If you can review any Educational software you already own, or feel you could write something on this subject, then please do respond,
If you are currently making any Educational software or have done in the past, then please get in touch and we can feature your work,

I would be interested in anything at all that you may wish to contribute to what I feel will fill a gap in the ATARI comminity,

Hopefully the page, complete with software links and comprehensive lists, will be up and running sometime in September, so please do send any info as soon as possible:)

NOTE * The page will be aimed at children, pre teens

Cheers.............!ynoT

Sounds like there's something wrong with the AOL s/w! I use the
"standard" Mac Internet programs (Netscape, Fetch, Eudora etc) and all
multi-task happily. The idea of setting up Stik and using CAB, when you
can use Netscape, is rather bizarre, imo ;-)

Sorry about the lack of a quote.

Anyway the point to his message was missed entirely. While the
Mac multitasks very happily it doesn't do preemptive multitasking at
least not yet except for some happy people on a beta crew for Apple.

Can you use STiK under Magic Mac Magic ect. in premeptive mode,
not in the release version. We are gearing up right now for a new
release that makes this possible. I know it's alot to ask but just wait
a couple of weeks and you will see it. Right now we are going into a
flurry of last minute beta's and tests to sqquash small bugs. :)

Dan

The 1040 ST has a special hard disk connector, the "DMA bus". The protocol used on this bus is a stripped-down version of SCSI. To use SCSI drives with this bus, you need a SCSI host adapter. ICD makes good host adapters, for example, but there are also other companies, at least here in Germany. Check out what they have.

IDE drives can also be used in a 1040 ST, but last time I checked you needed to add some hardware internally to do that. I'm not familiar with what exactly needs to be done, and I also don't know whether the drive itself would physically fit in the 1040's housing.

You can probably also make a good deal on used hard drives for the Atari.

This October, the Atari Users of North Texas will host their 2nd
annual Atari show. It will be at the Infomart (just like their monthly
meetings) as part of the Super Saturday computer flea market. There
will be some demonstrations, and I will personally bring in my classic
Atari game collection (2600/5200/7800/Lynx/Jag/Jag CD) for display -
play to your hearts content, free!

The show will be Saturday, October 12th. Make plans to attend!!!

This message from ag352@ccn.cs.dal.ca to All came in on a wing and a prayer...

Hi John!

a> I think the .CDT drivers are for CALAMUS SL. The chap who did the
a> original post stated he was using the older 1.09N version, which
a> requires driver codes with the .CPD extender.
Calamus 1.09N _will_ work with _most_ of the S/SL printer drivers. You copy the CDT file(s) into your Printer folder and rename the extender to CPD.

The IMG driver from SL works fine with 1.09N when renamed as described. As to where to get the driver from, there is a demo version of SL around that might prove to be a fertile source?

Regards, Derryck

HS>> about Christmas this year, anyway <g>
FS> How about the Hades?

I don't think I'll realistically see one of those at a nice second hand price
in England by Christmas B^{)

Seriously, I know I wouldn't have the money for one. I've seen it and been
relatively impressed, but Magic currently doesn't like it and while I
wouldn't expect to have any other compatibility issues arise I'm still
unlikely to have the money.

Then again, if someone else upgraded their existing TT to a Hades, meybe I
could get the cast off TT (just a thought - naming no names coz it might not
happen...)

2472. Re: ST's and Hard Drives

Newsgroup: comp.sys.atari.st
Date: 1996-08-13 00:00:00 UTC
From: ag352@ccn.cs.dal.ca
Message-ID: <4uovki$f6c@apollo.isisnet.com>
Source record: 140063

If you see a used Atari Megafile 20/40/60 or the old SH204 drive, you can plug any of these into your 1040 no problem. If you can't find one of these used, or require more than a mere 60 megabytes of storage, You can either assemble a unit from components or have one of the rare Atari-friendly shops assemble one for you.

You'll need:

Quantum SCSI drive, such as the 540 Lighning

ICD's THE LINK 2 host adaptor

DMA cable to connect to your 1040 (should come with the ICD LINK)

Case & power supply for the Quantum, available from most shops that deal in Macintosh peripherals

You should try to have your 1040's TOS level up to 1.4 or 2.06 to take advantage of the bandwidth of the DMA transfers

Hope this helps

JG

> Any help would be appreciated...

I have a Canon BJ-200ex and a Canon BJC-210 and use them both with
the STE and the MegaSTE, using Epson 24-pin drivers.

They work great, except that they tend not to understand the page
length with programs like STWriter. With AtariWorks< Pagestream,
etc. they are ok.

Harry Sideras (hsideras@mettav.demon.co.uk) wrote:
: *Hi Katherine*, on 10 Aug 96 you wrote:
: k>
: k> Hi guys, I am really confused about few little things.
: k> First: I would like to know, what is a good order in the auto folder.

: For example, my own running order is:

: REDIRECT ; redirect screen output to graphics card
: MAGXBOOT ; Magic (forces reboot)
: XBOOT ; Boot manager
: NVDI
: LETEMFLY
: DRVIN
: SCC
: STFAXMGR
: DMIRROR
: CHK_OFLS
: ADDMEM

This is only a side issue, but I really appreciate these sample auto folder progs listings. For one, they give me a good idea what to load in what order, and another is that I am clued in to progs and accs that I might not have thought useful or known about before. So, if you're helping someone out in a public reply, consider a quick list of your working (or non-working) auto, accs, and cpx folders.

Thanks and all that,
aardvyrk@cris.com

2476. Does an Amiga emu exist?

Newsgroup: comp.sys.atari.st
Date: 1996-08-13 00:00:00 UTC
From: Aardvyrk@cris.com
Message-ID: <4up8ua$irm@herald.concentric.net>
Source record: 140067

Hello, all.

I was just curious if an Amiga emulator was ever brought to fruition for the ST platform. It seems an industrious and charitable programmer has written a nice free SY-85 librarian/editor for the Amiga.

Hopefully, if one existed, it would run on a Falcon and properly address the MIDI ports--otherwise there really isn't much point to this whole line of questioning from my end.

Like I said, just curious. Besides, it would be neat to try it out. It would definitely be better than running those same ZX-81 programs over and over (I got 4 colors yesterday!)

Thanks for the courageous response Jim.

To many, the US is an easy target. The hegemon is never the world's friend. I have the good fortune of travelling and working abroad and have met some of the people that give our country a bad name. Additionally, I've studied both international relations and business at the University -- giving me a better understanding of the world and its exploits. The bottom line is, that in a world where borders and political ideologies and institutional barriers are constantly shifting or dissolving, it is important for us as citizens of the world to act responsibly and rationally. Thinking globally and acting locally makes the world a better place, and I hope that others can learn from yourposting, as it reinforced some of the convictions that I hold so near and dear to my heart.

Here's to world peace.

2478. OASIS to Mac Conversion (HELP!)

Newsgroup: comp.sys.atari.st
Date: 1996-08-13 00:00:00 UTC
From: Matthew Montfort <info@ancient-future.com>
Message-ID: <32103A9D.2CC7@ancient-future.com>
Source record: 140069

I very reluctantly purchased a Mac for my internet business, as my ISP doesn't work well with SLIP, OASIS, etc. Everytime I got things working, they would change something, and the Atari software wouldn't be set up to handle the new way. It was getting a bit absurd trying to run an internet web site on my trusty Atari.

So now I need to find a way to convert some large ACSII database files into Claris or Eudora e-mail nicknames. These files are presently stored on my Atari 1040 STE database. I can export them with any ACSII characters as field separators.

Can anyone tell me the correct file formats, including field separators and any Mac specific gobbledygook for Claris and Eurora e-mail nicknames?

Thanks in advance if you can help in any way. (I've already wasted 9 hours on this trying to figure out the right formats with Simple Text, Claris Works 2, Claris E-mailer, and Eudora along with my Atari Superbase Personal, OASIS 1.3 e-mail program, and Tempus text editor).

Please respond via E-mail so we don't waste too much bandwidth.
Matthew Montfort

You could also get a copy of Knarf's German MiNT distribution; although
the install docs are in German, it's easy to understand what's going on.

You choose whether you want just the basic package (MiNT) or the other
packages (compiler,x11,docs).

It should be on any of the German sites.

I feel stupid replying to my own message, but I found the UAE (Universal Amiga Emulator) in DOS, Linux and Mac ports. It might be fun for some to install Linux and then try to get UAE working, but I checked all the docs for the DOS and Linux ports and MIDI wasn't even mentioned :[though there is soundfile support, incidentally.

No MIDI=pointless, for my purposes. It looks like it can play a bunch of games, and like I said, it might be fun for some. If anyone knows of any other emus like the one above, don't hesitate to post. I might write the authors, though... hmmm. I think MIDI was done by proprietary boards on the Amiga, so programming it might be like trying to secondguess Gravis, TBeach, SBlaster, MPU-401, and others. Or there might have been a standard for the Amiga. Haven't checked. Does Linux even have MIDI ports useable?

You want the SoundPool FDI (Falcon Digital Interface). It has optical and coaxial ins and outs, which allow you to not only record into your Falcon using the digital/analogue convertors that are fitted to your DAT, not the Falcon's cheapo ones. One cool thing about it is the (bundled?) FDI backup software which lets you back-up your audio files to a DAT, thereby giving you an instant tape-streamer.

System Solutions is the place for this in the UK, but I'm sure that somebody will know a place in the Netherlands or Germany that sells them. I think it retails for about 450 GBP in th UK, but you should be able to get one for less - being of German origin it won't have so far to travel :)

I always connect to the provider in instances like these to hopefully do a user lookup, or failing that, an Alta Vista search. The first method worked, leading me to http://ic.net/~tjh/index.html.

You just might be out of luck. Running Notator SL is one of the reasons that I stick to my old 1040 STe. Due to elaborate copy protection routines built into the software and how it searches for the dongle thing in the cartridge port, other hardware won't run it.

Apparently somebody is designing an Atari ST clone cartridge and MIDI dock for adding on to I486/Pentium micros that have Gemulator already installed. I'll believe it when I see it.

Other than that, you might try to make a copy of the program and hack with the code to circumvent the copy routines: The designers of Notator have long since taken our $$$ and fled for greener pastures. You probably wouldn't get into trouble, provided you refrain from selling it or uploading it to an FTP site.

Good luck, but in the meantime keep an old 1040/SM124 handy in case nothing else works.

>I completely ignore them, they make little difference and rarely need
>to be modified by the user.

Actually, they can be very useful at times.

It is very unusual that you want to turn Fastload off - normally make sure
it is on for everything.

If you have no FastRAM/AltRAM/TTRAM then the Fast RAM flags are of no use
whatsoever. Otherwise, you usually want most things to load and malloc from
fastram. Sometimes, though, you might want to change things a bit so as to
maximise free RAM.

As for the "private" this is only relating to MiNT with memory protection.
If you don't use MiNT with memory protection, then ignore this. Otherwise,
most things will want to be private unless something else must read or write
to its RAM, then you must change it (sometimes this is a problem with programs
that use the AV Protocol - one passes a string pointer, but the receiving
application cannot access the string. In this case you could set the
application that sends the message to global.

Hope that is of some help.

A lot of our people only have access through one or another of the
Freenet systems. There is NO ftp access with a Freenet! Gopher, Lynx and
E-Mail only and most of the Gophers don't know an .lzh file from a .txt
file. Same goes for the self extracting tos archives that appear from
time to time!

> 2. Everything that gets put on a binary newsgroup has to be archived

Does give you a reason to check frequently!

> >: These days it is _much_ better to upload software to a web or ftp
> >: site and post an _announcement_ on one of the news groups!
I agree, but again not everyone can get to ftp sites, so a web site is
better, or umich which can be accessed either way, if you can get in to
ftp it there in the first place!

> >But it is not free, why should IBM users get all the free bandwidth they
> >want and Atari users with none?
With the Internet voice phone and live video for the PC's, I think the
bandwith argument is moot!

HT> By the way, now that Atari's closed down will it be legal to
HT> copy TOS EPROM chips? Or has someone else bought the copyright
HT> to TOS?

Hi Hallvard,
I'm afraid they're still under copyright laws and one of the things I've heard is that Wizztronics are in the process of buying TOS from the Tramiels. They also had an idea of making a new TOS available on all Ataris. I just wonder how long it'll be until the deal is closed - the first time I heard about it was several months ago...

Best regards,

Claes

AntMail isn't a Newsreader at all, it's a POP3 mailler.
It can work with MiNTnet (that's how I use it), but you need
to get your hands on GlueSTiK first - that's a TSR that lets
all STiK programs work with MiNTnet instead.

AntMail has been getting steadily better with each release,
and works with all AES versions I'm aware of (TOS4.02, AES4.1, Magic,
Geneva, XaAES, etc).

Craig.

BULLSHIT. Do you expend a lot of effort to be this clueless?
Copy protection only serves to put out mental defectives such as
yourself. It does nothing to stop those who are often more adept
at computer security than those putting up barriers to legitimate
users.

Quite frankly, you are a spineless floormat for putting up with
it. Cracks actually can be quite useful in getting past the
disrespect of developers. I was quite grateful to finally be
able to put that Falcon codewheel away after waiting 3 weeks
just to be able to buy this best seller only to be derided by the
CEO of Spectrum Holybyte for my trouble.

I havwe a Canon BJ-5, used in Epson 24-pin emulation. Very good in most
cases, but I sometimes find a similar page-length problem, with Marcel.
Printing landscape mode in Calamus requires stepping the resolution down
to 180x180. It still looks fine, though.

2524. (Taylor) UUCP for email and news - how?

Newsgroup: comp.sys.atari.st
Date: 1996-08-14 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GHOHDIVWUp@tos.ak.planet.gen.nz>
Source record: 140012
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have a UUCP connection to the internet, and I am currently using UPoint Light. This is working well, but I would like to be able to get the email and news down in a format more standard, so that I can use Tin and Elm to read/write email and news.

I already have a working MiNTNet setup that I use with PPP, and I understand that I need Taylor UUCP in order to get email and news via UUCP under MiNTNet.

I have got Taylor UUCP, but since I know nothing about the technical side of UUCP, I am at a loss on how to set it up. The documentation does not help much - it tells me how to use UUCP, but not how to use it for mail and news!

All I can work out so far is something about having to make the remote system run rmail and rnews, or something like this.

I did speak to someone who was using Taylor UUCP a while ago, but I have unfortunately lost their address.

Either way, any help on how to use Taylor UUCP for email and news would be much appreciated.

: are would be available using these types of higher speeds????
: E-mail advice would be greatly appreciated, since I don't visit here that often.
: graphic@delphi.com

14400 is no problem at all. All ST's can do up to 19200 with no mod req'd.
28.8 requires a hardware mod but can be done.
I run a Mega STe at 28.8 using Freeze Dried Terminal. (The best comms
program for tha Atari). This required software and hardware mods. It was
easy really.

>
> Maybe Uwe can tell us more about that :-)

I can only tell you that this is correct. The tools that come with
HDDRIVER do the same when creating such a partition.
But the original posting was about PC compatible partitions, wasn't it?
And with these partitions special care has to be taken. PC compatible
partitions > 32 MByte won't work on TOS. Data on them will be corrupted
because TOS can't handle partitions with more than 2 sectors per
cluster. Large PC compatible partitions have 4 or more sectors per
cluster. Such partitions work on TOS if you use BIGDOS or MagiC 5.

No, there is no maximum. You can connect SCSI drives of any size.

> 2) Does the hard disk driver affect this? I'm using AHDI right now,
> but I'm willing to change to HDDriver now that it seems the Cubase
> Audio offline problems are fixed.

AHDI won't work with drives > 1 GByte, other drivers do. When using AHDI on such drives you won't be able to access sectors that are beyond the 1 GByte limit because AHDI doesn't support the appropriate SCSI commands for this. Even worse: If you have connected more than 1 SCSI drive to your Atari, AHDI might damage data on one drive when trying to write a sector > 1 GByte to the other drive.

> 3) I know about the Quantum Fireball incompatibilities, and I'm
> staying away from all Quantum drives for that reason. But are there
> any other drives that people KNOW will cause funkiness?

If you don't want to boot from a Quantum Fireball drive, you can use it without any problems. Note that you need a driver that supports initiator idenfication. Once again AHDI wouldn't work.

Hallo Callum,

When I bought MIDIMAZE II 5 years ago there came a MIDIMAZE
from XANTH with it as PD. In a readme was to be read, that
the Authors of MIDIMAZE II tried to contact XANTH with the
help of HYBRID ARTS GERMANY and HYBRID ARTS in USA - but failed.

And this version from XANTH was now PD, could be copied onto
a Harddisk and is fully playable (with ninjas, std. drones etc.).

Since this version do not need an floppydisk I could send it to
by mail - if you still need one ;-) .

Hi,

I have for sale in Holland an Atari TT030.

Includes:
- 8 Mb internal memory (4 Mb ST-RAM / 4 Mb TT-RAM).
- 48 MB Seagate.
- 212 MB Maxtor.
- TTM194 19" monitor (1280 x 960 x 2).
- SLM804 laserprinter (just installed new drum and toner).
- Spectre GCR Apple Macintosh emulator.
- Lighthouse tower case with 150 Watt PC power supply.
- Original case and powersuply available and usable without soldering !
- DD drive.
- Also have a HD drive available but needs Ajax controller.
- 8 x 1 Mb simms for TT-RAM upgrade (needs another TT-RAM board).
- Lots of dutch Atari related magazines and books.
- About 175 diskettes with Atari software.

It is a fine machine but am moving to the Linux environment.

All in one sale only !

2537. Win95 style start menu for Atari TOS?

Newsgroup: comp.sys.atari.st
Date: 1996-08-14 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GHOWAHUQUp@tos.ak.planet.gen.nz>
Source record: 140025

I recently heard of a program that allows Atari TOS machines to get a
"Start" menu, similar to Windows95.

What is this program called and where can I obtain it?

Any help will be appreciated.

------------------------ forwarded message ------------------------

Message #18 (18 is last):
Date: Wed Aug 14 01:25:42 1996
From: 75300.1267@CompuServe.COM ("Donald A. Thomas, Jr.")
Subject: CATnips (epilog)
To: BlindCopyReceiver:;

You may like to know that I have submitted my resignation to Atari and have determined that Thursday, August 15 will be my final day.

I have been at Atari since November 1989. I helped launch the Portfolio, which enjoyed tremendous success early in it's life cycle. Later, I took on the role as a specialist and helped represent Portfolio technology at specialty trade shows, key account presentations and in exclusive development scenarios. More recently, I have streamlined an effective customer service department pursuant to the resources afforded by corporate direction. During much of this time, I have made every effort to be accessible and active on CompuServe as well as GEnie, Prodigy, our Web Site and a BBS I sustained privately in my home.

Prior to Atari, I worked at Federated Electronics stores and was known within the organization for my prejudice for Atari brand computers and games. Much of my software library was provided to Federated as samples and the software buyer asked me to test the latest titles.

I purchased my first Atari product in the early 80's. The 2600 was financed on my First Visa Card from a Video Concept store in Dallas, Texas. I was so impressed with the technology that I taught myself programming and developed a newspaper delivery game to present to my employer, the Dallas Times Herald, long before Paperboy ever hit the coin-op arcades. Only the crash of the video game industry in the mid 80's kept me from entering the industry during those years.

My first computer was the TI99/4a and, later, the Commodore 64. But it wasn't until I opened an Atari 400 box in my apartment that I developed a passion and soon found myself hoarding every cool thing I could find. From Scott Adam's adventures to my MPP1000c modem and Rana disk drives, I was virtually possessed.

After the Tramiels took over Atari, I bought into their 16-bit computer line hook, line and sinker.... and never regretted a single moment.

When the Tramiels acquired Federated in the late 80's, I thought I died and went to heaven. For the first time, I met the likes of Neil Harris and Mr. Jack Tramiel himself. During the day, I helped expand Atari exposure in Atari's new chain of electronic stores. At night I honed my programming skills into a line of software I called Artisan Software. I successfully, released a total of 5 titles under that label, all for Atari 16-bit computers.

In 1989, Atari was compelled to discontinue Federated operations and my career became a casualty in Jack's business war. While seeking employment anywhere I could, I dedicated time and energies into the Atari Revolution... a grass roots movement dedicated to foster word-of-mouth for Atari's fine line of products. In November, Atari hired me back and I met Bob Brodie, Frank Foster and a brigade of personalties who have long left a permanent mark in the historical remembrances of the world's longest surviving home computer/video game company.

On August 26, I will be joining the professionals at Sony Computer Entertainment. As you undoubtedly know, the Sony Playstation is America's number one choice in next generation technology. After examining the opportunities that are out there, the PSX looks to me to be the most promising long term video game investment and I am proud to become part of the PSX team.

Atari, the name and the products is directly responsible for so many things in my life. Inclusive are personal development and the acquisition lifelong friends. The Tramiel family is equally responsible for having enriched my life with wisdoms that I will forever value. There will always be a special part of my heart for Atari. There will always be an envy that I wasn't there during more glorious days and always I will take pride in knowing that I worked my hardest during Atari's most difficult times.

As you undoubtedly know, Atari has just completed a merger with JTS; a reputable supplier of hard disk drive technologies. The terms of the merger relegates Atari as a division of JTS and no longer is Atari an independent corporate entity. Shares of stock are now traded by the symbol JTS. Atari's staff as of next week will consist effectively of 4 people; all of which are among the most proud and honorable I have ever known.

On behalf of Atari, past and present, thank you to everyone who supported us. Atari will always be an institution in our hearts remembering the evolution of Pong, Asteroids, Star Raiders, Major Havoc, Millipede and many more. Look for Atari's afterlife in licensed titles for other systems.

I have every intention to continue frequenting the Atari support areas and you will no doubt find me popping up in a PSX forum near you! I'll look forward to seeing you there.

: >the impression on Oasis2/ICE that I thought it would. I still get the "UDP
: >bad checksum" message quite a bit.
:
: Ah, I see part of the problem. UDP is (according to Hewlett-Packard) an
: "unreliable protocol." If demon is using UDP for mail and/or news, I can
: understand why you would have problems. What I can't understand is /why/ they
: would use it in modern times.

UDP is the 'User Datagram Protocol'. It is an unreliable protocol in that there is no confirmation that the packet has arrived at the protocol level. Thus, the application has to deal with timeouts/retransmissions, etc. TCP (Transmission Control Protocol) has timeouts/retransmissions built in to ensure delivery, so the application does not need to worry about it.

Checksums in the payload part of the UDP packet are optional (to quote from RFC 768) :

'An all zero transmitted checksum value means that the transmitter generated no checksum (for debugging or for higher level protocols that don't care).'

Mail and news transport does *not* use UDP. There are specifications for them (RFC's - Request for Comments) that define the protocol and the transport. They both use TCP because that is a reliable transport mechanism. UDP is used for some things where speed is more critical and the network is more reliable (e.g. NFS over local areas). UDP is used because it is expensive in processing time to calculate TCP parameters, so machines (when the specs were written) couldn't cope with the load imposed by TCP.

It could be that the code is trying to match the checksum from a machine that didn't set one. Alternatively, the checksum really is bad and thus the packet has been corrupted in transit - somewhere between the source and destination. If you suspect your serial connection, I would suggest dropping the line speed to test this. If the serial hardware is suffering from overruns, a lower line speed should help.

What exactly generates the UDP bad checksum messages?

From: garn9114@kutztown.edu
Message-ID: <4usvik$4sd@jake.esu.edu>
Source record: 140029

First, thanks to all who responded to my problem about the MDK. The
Taf distribution worked like a charm, and took no time to install.
However, I am having one small problem with X-Windows. When the machine
boots up it's not going into ST-High rez, so X-Windows won't work
properly when it comes up. I've been able to run X-Windows only when
removing the exec lines in Mint.cnf, running tcsh from Gem, *then* typing
the exec lines and starting X. Of course, Gem was in St-High then. Has
this problem occured to others, and if so what can I do about it?
Thanks again, I greatly appreciate the help,

George Garner

TAF seems much more reliable than the other distribution, but I'm
having trouble bolting on other bits. GCC doesn't seems to do much, I tryed a
small "hello-world" type program, but I couldn't find any output. Do the
environment variables from the MiNT distribution need to be in tsch's
initialisation file as well as in mint.cnf ? The man pages might help, but I
can't get them to work either ! I understand the the version in the distro only
likes the tast of version 0.95, there's a newer one on the Atari Compendium CD.
Running tsch *and* X11 *and* GCC is probably a bit of a non-starter anyway.
(Only 4Mb..)

There are ftp-by-email servers available. Sure, it's slower than ftp,
but you get what you pay for.

>With the Internet voice phone and live video for the PC's, I think the
>bandwith argument is moot!

You mean, you get all the bandwidth you want for free, so other
people's worries don't matter?

>> The huge number of IBM users makes distribution via Usenet a lot more
>> defensible. It might even save bandwidth if a large enough number of
>> people want the files. That'll never be the case for Atari users.
>Heck, they can go into a store and buy all the software they want! 8^) We
>are rather limited in that respect!

The technical point is that, for IBM software, distribution via Usenet
uses less resources than distribution via ftp. For Atari software,
it's the other way around.

2551. Draft RFD: comp.binaries.atari.{,discuss}

Newsgroup: comp.sys.atari.st
Date: 1996-08-14 00:00:00 UTC
From: "Kyle R. Hofmann" <rhofmann@crl.com>
Message-ID: <4utbeo$si9@nntp.crl.com>
Source record: 140039
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

```
[ This is a draft version of an RFD intended to be posted to
news.announce.newgroups soon. It is being posted to the comp.sys.atari
groups for feedback before the final submission to David C. Lawrence,
the news.announce.newgroups moderator. Please give us your thoughts on
this proposal. Thank you. --KRH ]

REQUEST FOR DISCUSSION (RFD)
moderated group comp.binaries.atari
unmoderated group comp.binaries.atari.discuss

Newsgroup line:
comp.binaries.atari Binaries for Atari computers. (Moderated)
comp.binaries.atari.discuss Discussion of content of c.b.a.

Proponent: Rich Tietjens <starship@3rdplanet.com>
Proponent: Kyle R. Hofmann <rhofmann@crl.com>
Proponent: Adam B. Roach <adam.roach@exu.ericsson.se>

This is a formal Request For Discussion (RFD) for the creation of
world-wide moderated Usenet newsgroup comp.binaries.atari, and
unmoderated comp.binaries.atari.discuss. This is not a Call for
Votes (CFV); you cannot vote at this time. Procedural details
are below.

RATIONALE: comp.binaries.atari

Currently, there exists no appropriate and easily accessible medium
for the release of Atari software. There is also a growing pool of
software available for these machines which would recieve a
marginal distribution at best due to this lack of a medium.
Though FTP sites and several binaries newsgroups
(alt.binaries.comp.atari8bit and alt.binaries.atari) exist, many
Atarians do not have FTP access and the alt groups have a poor
distribution.

By creating comp.binaries.atari, a medium would be established.
comp.binaries.atari would provide a method of distribution. With
c.b.a, the immediate dissemination of new releases and bug fixes
would be possible.

This method also has the advantages of using comparatively fewer
system resources than other methods, and of keeping binaries out
of existing comp.sys.atari.* discussion groups.

END RATIONALE.
```

RATIONALE: comp.binaries.atari.discuss

The existence of a .discuss group allows the discussion of the binaries groups to stay separate from the actual binaries postings and from non-binary related postings. Without a discussion group, non binary posts related to the topic of the binaries heirarchy have no single place in which they can be discussed; instead, they are spread around a heirarchy of newsgroups, making worthwhile discussion difficult, if not impossible. This discussion group will create a proper place for discussion and comments on binary software posted in the comp.binaries.atari.* heirarchy.

END RATIONALE.

CHARTER: comp.binaries.atari

For the distribution of Atari compatible or Atari related software. This includes bugfixes, updates, and new releases to Atari computer software and software on other platforms related to Atari computers (such as emulators, disk image maintainers, and Atari to PC communication software). Software that has been posted within the last 60 days will be rejected; no reposts will be made within that time period. Non-binary or non-software submissions will be rejected.

The moderator will cancel any post which has been posted with a forged approval header.

Specific examples of allowed software include:

- Freely distributable software
- Revisions of previously released software
- Bugfixes of previously released software
- Commercial software with the explicit permission of the copyright holder

Specific examples of disallowed software include:

- Pictures, music, and other non-software binaries
- Recently posted software (posted within the last 60 days)
- "WaReZ", pirate software posted illegally without the copyright holder's permission
- Discussion of software posted to comp.binaries.atari
- Requests for software
- Reposts of software previously posted

END CHARTER.

CHARTER: comp.binaries.atari.discuss

This group is for the discussion of binaries posted to the group comp.binaries.atari. On topic posts include:

- Asking for alternate methods of distribution for a binary
- Discussion of the relative merits of a particular binary in comparison to competing packages
- Requests for a piece of software which has not been posted recently
- Requests for a piece of software which was incomplete to be mailed

Binaries, spams, MAKE.MONEY.FAST schemes, computer advocacy, and discussion not pertaining to the comp.binaries.atari groups is considered off topic.

END CHARTER.

MODERATOR INFO: comp.binaries.atari

Moderator: starship@3rdplanet.com (Rich Tietjens)
Backup moderator: rhofmann@crl.com (Kyle R. Hofmann)
Submission address: starship@3rdplanet.com

The moderator is author of a number of freeware packages for the TOS compatibles, active in the various Atari discussion groups, several fido-technology networks, and is employed in the networking industry.

END MODERATOR INFO.

PROCEDURE:

The discussion period lasts 21 days from the initial post of this RFD. If there are no major objections to the naming or placement, then the CFV (Call For Votes) will be issued, lasting for at least 22 days. Following the vote, there is a 5 day discussion period after which newsgroups that passed will be newgrouped by the moderator of news.announce.newgroups.

Followups to this post are directed to news.groups, which is where further discussion will take place. Cross-posted followups are discouraged. Please read news.groups to participate. Thank you!

DISTRIBUTION:

This RFD has been crossposted to:

news.announce.newgroups, news.groups, comp.sys.atari.8bit, comp.sys.atari.advocacy, comp.sys.atari.st, comp.sys.atari.st.tech, comp.sys.atari.programmer

Can anyone recommend a good database for a Mega STE with 4 megs? I've tried Fastbase. It seems pretty good, but I haven't been able to locate the author via email for updates and registration.

Any suggestions, Shareware, commercial, or PD would be appreciated.

Dale

I dunno if I'm talking to Gabe, or to Anna here, but anyhow: There's a small list of vendors at http://www.3rdplanet.com/~starship/atari.htm#Vendors - I hoep that at least one of them will provide you with suitable software. Print Shop and Printmaster Plus were both published for the ST (I bought PM+, saw PS being used by someone else and wasn't very impressed).

2556. Updates to UUCP-ST

Newsgroup: comp.sys.atari.st
Date: 1996-08-14 00:00:00 UTC
From: RichardX_Tietjens@jf.intel.com
Message-ID: <4ut25n$3ao_001@jf.intel.com>
Source record: 140044
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Latest UUCP-ST and Wormhole updates (version 1.2) are now available at
http://www.3rdplanet.com/~starship/atari.htm

Changes:

- Replaced Play.ttp in archive with LPS123.TTP; a more versatile and
robust sound player for all TOS-based systems, including MiNT and MultiTOS.

- Corrected News_In behavior when it encounters a "Sender: " header in a
news article.

- Added rudimentary threading for news articles that are ported back to
the internet by NewsOut.

- Improved behaviour of Wormhole when it encounters multiple inbound
packets with identical packet filenames (allows it to call your mail tosser
to handle each packet as it arrives, rather than in a batch, if needed).

- Added code to News_In to simulate a killfile for the purpose of
eliminating certain users' posts and excessive cross-posts.

2557. Any Dr. T's OMEGA II Users?

Newsgroup: comp.sys.atari.st
Date: 1996-08-14 00:00:00 UTC
From: bat@cyberden.com
Message-ID: <bat-1508960206300001@rpk-18.nbn.com>
Source record: 140045

Curious if there are any others out there still pounding on this? Before Dr. T's dropped Omega II (years ago), I was one of their Beta-Testers and since then have been using Omega ever since. Personally I love it but I've been having an ongoing problem that I've been trying to solve but seems impossible.

It seems when I quite from Tiger or the Song Edit screen or sometimes just after a mouse click (right click), the entire thing freezes up yet the mouse still moves. Any key hit doesn't produce the standard Atari BEEP but instead the same sound with quite a long sustain and fade out to the same beep... i.e.:

instead of BEEP you get BEEEEEEeeeeeeeep

The only solution is to shut down and restart.

Now this may be a machine problem but since it only happens at a specific function, I doubt it.

I'm using a Mega-II ST.

Anyone else have this problem?

I've also tried to use the MagiCMac program to run OMEGA... no dice. Impossible. Is anyone running OMEGA on a PC using any kind of emulation?

Thanks

Bat

From: Paul.Muehlbauer@flight.org
Message-ID: <946_9608150106@flight.org>
Source record: 140049

Howdy. I've got a Spectre GCR, a Syquest 105 removable drive, and a friend who just bought a new Mac Performa.

1. How difficult is it to hook up the Syquest to the Mac (I figure easy - I'm just wondering about termination - I sure don't need to mess up the new drive with all the preinstalled software!)

2. And can a cartridge be formatted to work with the Spectre & Mac? (Any special format, any partition size limits, etc.?)

3. I just got a used TT, and heard that it can work with the Spectre, but might need some patches or special setup. Any details?

Thanks any & all, e-mail or here.

Thanks to all who replied...

I found most of what I need, however, I am still searching for a 1040 ST, STfm, or STe. Anybody who wants to unload their old Atari, just let me know the price. To recap, I need a ST, mono monitor, and the mouse. Any good prices on a package that includes a modem or HD, would be good too.

THANKS TO ALL!

Source record: 140054

FROM: SSweet@mettav.demon.co.uk
SUBJ: English Papyrus 4 - When?

FS> And there are worlds between version 3 and 4 of Papyrus. V4 is
FS>more stable, written in C and needs less memory.

SS>> Wow, and this version 3 of mine is rock solid, must be some mean
SS>> machine.

FS> How often do you use papyrus (and do you use MinT/MTOS/N.AES)?

Quite often, and when i do use it its to type up 30 copies of a letter for my Cub-Scouts, and i use it under Magic 4 and print via the NVDI fast printer driver, DEV_FPRN.DEV, to my LaserJet 5L at 600*600 DPI and usually with Twist 2 running in the background keeping track of my Cubs database.

I also have about 200 odd Speedo fonts permanently installed, and sometimes i use a config that has these fonts and another 400 or so TrueTypes.

Its rock solid here my friend.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

You're obviously unaware that "freenet" doens't mean cost-free access. It means that the users pay the costs of operations, and not a large profit to the system operators.

>>With the Internet voice phone and live video for the PC's, I think the
>>bandwith argument is moot!
>
>You mean, you get all the bandwidth you want for free, so other
>people's worries don't matter?

See above.

I'd also point out that, in spite of your obvious concerns that Atari binaries will somehow generate undue bandwidth problems, nothing could be farther from the truth. The largest Atari binary file I have ever seen was under 1 meg in size, and it is a complete Internet access package with SLIP stack and dialer, browser, telnet, ftp, email, and some odds and ends. Compare that to the average /game/ package for an IBM clone, running 3 megabytes and up, or Netscape, which at last count was something over 4 megs without a stack and dialer.

>>> The huge number of IBM users makes distribution via Usenet a lot more
>>> defensible. It might even save bandwidth if a large enough number of
>>> people want the files. That'll never be the case for Atari users.
>>Heck, they can go into a store and buy all the software they want! 8^) We
>>are rather limited in that respect!
>
>The technical point is that, for IBM software, distribution via Usenet
>uses less resources than distribution via ftp. For Atari software,
>it's the other way around.

I disagree. To oppose a binary newsgroup for Atari files while supporting the huge bandwidth required for PC files is a position revealing either ignorance or hypocrisy. I choose to ascribe it to ignorance; but opposing the newsgroup is a form of discrimination in either case, and does not

speak well of one's attitdue towards the democratic process. You do have the right to express your opposition; I would like to enlighten you as to the facts of the situation, however, in hopes that you may change your mind.

The fact is that Atari binaries are miniscule in comparison to equivalent packages for Microsoft-OS platforms (and even compared to Mac platforms); there are few well-maintained ftp sites for Atari files nowadays, even though Internet access for Atari users is on the rise (in a rather steep curve, in fact) rather than on the decline; and those that remain do not all have email access to files.

The bandwidth requirements for an Atari-specific binaries group can be reasonably expeccted to be below that of a single IBM-clone binary file; certainly far below (perhaps several orders of magnitude lower) than any of the alt.sex.binaries groups.

The lifetime of a binary posted in newsgroups is far shorter than that of one archived in an ftp site, but becasue of the volatile nature of software development, this is in fact an advantage; one is far less likely to inadvertantly spend hours downloading a file that has been superseded by a later release; in the case of the soon-to-be-formally-proposed Atari newsgroup, the odds approach zero, due to the nature of moderation and the proposed charter (which is now in something like its fourth incarnation).

The storage space for an archive of the newsgroup will be likewise small; a single 1 gigabyte drive will probably be far more than adequate for the next decade.

Did I fail to address any of your concerns? I'll be most pleased to follow up if I did.

Primary Atari newsgroups restored to the distribution line; this discussion concerns all Atari users.

2568. Re: Cubase 2.0 (or higher) 'cracked' version needed

Newsgroup: comp.sys.atari.st
Date: 1996-08-14 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <4ur9vg$ekf@Einstein.ebicom.net>
Source record: 140106

No question about it...
Anytime you give away, or sell a cracked version of copyrighted software this is wrong. This also goes for uncracked copys unless you are including the transferal of all lisences and privlidges of that lisence to the new owner's name. It's never a good idea to make this transfer online. I personaly, would never send copyrighted stuff electronicly without written permission from the copyright holder. You never know for sure who has access to the data, and it is not the FULL product package as intended by the copyright holder (most of the time).

My question here is this...
How do most developers feel about an owner who cracks open a purchased and registered version of software for his own personal use. I've done this with some of my music software. I don't expect it to be supported once I've done this however...and my modified stuff is never given away, traded or sold. I don't consider myself a programer, and have not or never created for sell, free, or trade - a similar product to those that I've cracked (or any other software for that matter), so it's not like I'm using their ideas or code to develop a competing piece of software. All I do is add or delete little things, and occasionaly change the GEM resource to a more personal fit. There are a lot of simple changes that can be made to Atari software with very little hacking...espically with the resources. I'm wondering if this is legal or not...I rarely see anything in the "Contracts" that are usually found in the manual about modifications so I'm wondering if there is some "common knowledge" prohibition on modifications for personal use.

Being a professional musician myself...I highly favor the programmer's rights to claim intellectual property. This is very important to anyone who makes a living from an abstract product such as knowledge or creativity. After thinking about it, I wish I had written and asked permission to modify for personal reasons, but at the time I felt that as long as I didn't steal or infringe upon the copyright holder's ideas and monetary rewards of his hard labor that things would be okay.
I personaly don't mind people disecting my music, and changing it playing about with it...after all, I've grown up listening to all kinds of music, and nothing I do is totaly origonal. I must admit however... it really makes me feel good, actually cooperative, if I get a call from someone asking permission to take a sample from one of my demos, or asking if it's okay to try to copy an unusual synth sound I've managed to come up with. First of all, because most of the people who are interested enough in something to study and expand their ideas, 9 times out of 10 end up contributing something to my profession, if not to me personaly.
I believe that most programmers have similar feelings about their software. If you've bought his software, registered it, upgraded it

regularly at the inital upgrade price, and taken time to send him comments and suggestions for improving his product, as well as refered and demonstrated his product to other potential coustomers, you'll find that all it takes is a little courtesy to get anything you need within reason from this programmer. A good example of this was the release of KCS Omega under Dr. T. In the beginning it was heavely copy protected. The coustomer base in the beginning was so good at sharing the rewards and problems of this tool, that the copy protection was quickly removed at the request of their present coustomer base. I'm sure there've been a few theives out there who grabbed a copy of KCS for no good reason other than sheer greed...but these few people never really USE the tool anyway, and wouldn't have purchased it even if it were copy protected. A few others who did steal it with the intention to USE it...sooner or later ended up buying the package for support and upgrades anyway. After all...back when KCS was a top dollar sequencer...it cost nearly half as much as the package to run off the documentation on a copy machine, as this particular package put almost as much money and effort into producing good comprehensive documentation as they did in the actual software.

In terms of electronic transmission of any copywritten data...my understanding is that you MUST have written permission from the copyright holder before sending this material. Even in the event that you've co-lisenced the software...it requires a special lisence...including networked systems etc. In the event of shareware, permission is usually included in the archive...and in most cases it's not really copyrighted in the first place, but more a pay by use honor based system.

Oh well...I guess my point is...we should ask the maker before we do anything with his intellectual property that is not clear in the lisenceing contract. You can often get away with doing what ever you wish...but you'll get a lot further if you simply ask. If you try to get something for nothing...you'll end up wishing you'd just purchased the stuff in the first place...you'll spend more time sneaking around in the underground double wording your requests for info and upgrades than it's worth. Just buy it...and communicate your concerns with them once you're a part of the team. I find Notator's Dongle a pain in the butt too...but unfortunately this is a quirk I have to deal with if I want this engineer's otherwise excellent music making tool. They feel strongly about keeping the dongle...partly because of the inital expense in setting up the technology to produce such a device, and partly beacuse their data shows it has met it's purpose exactly as intended. It hasn't cost them the kind and number of coustomers they value, and it's prevented a lot of theft. The dongle's been a small price to pay however...as the Stienburg, C-Lab, Emagic teams have stayed in buissness and expanded to all major platforms while still offering good support to older nich platforms. They are also awful close to being the oldest kids on the block with the most experience in producing solid professional music making packages. There are trade offs, no matter what programs you choose.

I'll drink to this thread...
CAB, Antmail, STik, the new CAB cache tool...
They ROCK!!!

Telnet and FTP are "okay"...
I just wish someone would come up with a Faster Telnet, and
an FTP that works with Geneva.

Thanks for the FTP and Telnet we've got...they do work...but I can still
wish for them to improve right?

(No Joke...I'm saving up to send a nice check to these WWWpackage guys)

My last answer got screwed up in xmission, so, again.
Spectre GCR will apparently run on SOME TT's and not on athers without fixing.
The shielding on the flopppy is inadequate on some. simply try it, and if it works fine. If not e-mail me and I'll give you instructions, if you're not afraid to take the TT apart.

Under UK law to copyright something you just clearly state that it is
copyrighted material. This is all you need to do, if it is important
and you feel that you may need to present it as evidence in court then
put whatever it is in a jiffy bag and post it to yourself recorded
delivery and keep it safe, if it ever needs to be presented as
evidence it can be opened in court the dat of posting noted and there
you have it.

How about Papyrus? Not strictly DTP, but a damm good document processor.
So good in fact that Atari Computing Magazine will be using it a lot to do
WPing and most DTPing!

HiSoft sell it in the UK. It was about 90 pounds when I bought my copy.
Version 3.66 (or thereabouts) is the latest English language release.
Version 4 is out in other parts of Europe, but I heard earlier today that
HiSoft said that they doubt if the English version 4 will ever be finished!

Time methinks to start bombarding them with mail!

No, I don't think anyone will be buying the title. A number of AW's writers are now working on Atari Computing magazine. The joint editors are Frank Charlton (Ex-STF) and Joe Connor (Ex-AW).

My aim, as AC's publisher, is to make the new magazine as well respected as AW was. But at the same time having it's own identity and ideas.

If you want further details, please email me as below. The magazine will be officially launched at the UK Atari Shows in September.

an162313@anon.penet.fi wibbled in COMP.SYS.ATARI.ST on 15 Aug 96:

a> Hmmm... I don't see an Email address in the header you so cleverly
a> read. Looks more like a posting host to me. Maybe it wasn't so clumsy
a> after all, eh?

Well, I got a reply from the school and the postmaster informed me that the account had been terminated, so you can figure it out for yourself - perhaps.

a> On another note, I'm wondering why you found it necessary to respond to
a> the original post?

Actually, that was for the benefit of the rest of the newsgroup - that way, they know that someone has taken the trouble to find an /official/ way of telling young mister "bite-me" to go to Hell.

a> I've always found it quite amusing how defensive Atarians are regarding
a> their choice of "computers." Quite pathetic actually.

I suppose if someone told you that you were a fool for using an overpriced pocket calculator that had to wait ten years worth of expensive "upgrades" (read: the damn thing wasn't suitable for a personal computer when first released) to be capable of playing games that were released for the Commodore 64 in 1984, that you wouldn't be a bit irritated? Go ahead, lie to me and yourself.

Try telling Peter Sinclair-Day that the Mac isn't the best computer for every possible purpose if you want to see pathetic defenses. And, as far as pathos goes, I notice you're so terrified that someone will find out who you really are that you had to use the anonymous remailer in Finland. What's wrong, worried that you might be revealed as a penile-deficient troll?

You're a fool. Follow-ups redirected to a more appropriate venue.

2578. Mountain Software Shareware Bundle

Newsgroup: comp.sys.atari.st
Date: 1996-08-15 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <4utq5f$nam@news.pacifier.com>
Source record: 139958

Announcing the:

Mountain Software Shareware Bundle
==================================

As I posted a few weeks ago, I have reduced the price of my shareware programs to only $10 each. These include:

1. Easy Base..... Simple Database Program
2. Easy Go..... Easy to use program launcher
3. Easy Money..... Basic address book/financial planner
4. Learn My Numbers.. Educational game teaches numbers 0-9
5. Manualizer..... Prints any text file in booklet form
6. Mountain View..... A really handy text viewer
7. Movies at Night... Animated screensaver system
8. Pen Pal..... An easy to use text editor
9. Tuzzle..... A fun sliding tile puzzle game

However, I realize the Atari market isn't what it used to be, and even $10 may be more than you want to spend for a single Atari program. So, in an effort to continue supporting the Atari community that supported my work for so long, I am offering a special package price on all of my Atari shareware products.

Simply send me a check or money order for $25 in US Funds and ask for the "Mountain Software Shareware Bundle". I'll send you registered copies of all NINE programs listed above. Even at the recently discounted prices thats a $90 value!

If you only want one program, that's fine, you can still order them separately for just $10 each. But, this is an incredible deal on some great software!

Thank you again for all your support!

Anthony Watson

Source record: 139963

Hi, I would like to know if it is possible to hook a VCR into a SC1224.
I mean except the atari slot, what else is available on this monitor?
Thanks. Reversely, How could I plug my Megaste (it doesn't have a modulator just the atari slot) into my TV (only antenna)
Bye.

2584. SED 5.68 (disk monitor) now available

Newsgroup: comp.sys.atari.st
Date: 1996-08-15 00:00:00 UTC
From: Claus Brod <claus_brod@bbn.hp.com>
Message-ID: <3212B459.4B0@bbn.hp.com>
Source record: 139964

Just wanted to let you know that I have decided to make both the sources and the executable program for SED available. SED had been a part of the "Kleisterscheibe", the program collection for my book "Scheibenkleister". The book is out of print now, and I can no longer work on improving the software, but maybe there are people out there who are fluent enough in GFABASIC to work on it and/or want to use a decent Swiss-army knife type of tool such as SED.

The program and all documentation is in German. It's a GEM program, and it should run on TOS, MultiTOS and MagiC. SED does not support IDE drives, and it does not work (at least not completely) on the Falcon. But for ST and TT owners, it still makes a very useful disk, hard disk, file and RAM monitor. If you are interested, check it out at

I can't seem to get my fonts to load right. Some ofg the fonts print and the ones I want to use either Print and don't move or don't print at all. I have my PLUGIN Pro on the fonts FOLDER and the root dir, but it wont seem to be able to load into fonts manager. I have it working at one time until I had to re-format my hard drive. Thanks in advance.

Hmm.. maybe the DNS on your ISP was broken for a while.. HENSA is
still there..

>Does anyone know where it went?
>Did it move or did they shut down the atari area?
The Atari area is still running (last time I looked) however it is not
being updated anymore. :(

Atari stuff forsale.

All prices include shipping. Will reduce the price if you take large
quantities of stuff. I will sell on a first come first serve basis
UNLESS someone makes an offer for the whole bunch. (If you think
any of the prices are outragious, make an offer.)

Hardware:

1040 STf (w/ TOS 1.4 installed and the TOS 1.0 chips) $100
512 STfm $75
1040 STE (upgraded to 4 Megs) $175

SC1224 color monitor $90
SC1224 color monitor $90
SC124 b/w monitor $70

Monitor Master $20
Omniswitch $25

SLM 804 Atari Laser Printer $175

SH204 (20 meg harddrive) $50
(It works. You could use the controller and box and replace the disk)

Toadfile 129X (85 meg harddrive, 44 meg Syquest, clock card)
with 8 syquest disks $325

SF314 (External Floppy Drive) $35
SF314 (External Floppy Drive) $35

Spectre GCR w/ ROMs $125

or take all the hardware ($1390) for $1100 shipped and sell the pieces
you don't want.

Games: (All in original boxes with docs)
(Buy a bunch and every fifth one (sorted by cost of course) is free.)
(Or take it all ($628) for $475)

Pirates of the Barbary Coast $3
Astaroth $8
Populus $10
Dragon's Breath $8
Full Metal Planet $10
Sherman M4 $10

Tower Toppler $6
Fire Zone $10
Universal Military Simulator $10
Castle Warrior $6
Battlehawks 1942 $10
Archipelagos $6
Shinobi $6
The Quest for the Timebird $10
Heroes of the Lance $10
Windwalker $10
Deathbringer $10
Star Trek: The Rebel Universe $10
Road Raider $10
Manhatten Dealers $6
Barbarian/CrazyCars/EnduroRacer/Wizball/Rampage 5-pac $12
Harrier Strike Mission $8
Space Harrier $6
Death Sword (same as barbarian)/Barbarian II $12
Alien Fires $6
Drakkhen $10
Super Huey $7
Rocket Ranger $10
Hero's Quest $10
Global Commander $5
Roadwar 2000/Roadwar Europa $12
Championship Wrestling $5
TechnoCop $10
Star Raiders $6
Sim City $6
Dungeon Master $10
Eye of Horus $10
Hostage $8
Shadowgate $10
Falcon / Operation Counterstrike $12
BattleMaster $10
BattleChess $5
ArticFox $10
Warship $10
Elite $8
Sundog $10
Obliterator $10
ChronoQuest $10
Star Fleet I $10
Flight Simulator II $10
Brataccas $5
MidiMaze $5
Skyfox $10
Plutos $6
Xevious $6
Hacker/Hacker II $12

Double Dragon $6
Airball $6
Adventure/Eliza/Life/PONG 4 pac $10
Nine Princes in Amber $10
War in Middle Earth $10
Legend of the Sword $6
Zak and the Alien Mindbenders $10
Leather Goddess of Phobos (you can still scratch&sniff) $10
A Mind forever Voyaging $10
Wishbringer $10
Enchanter $10
Cutthroats $10

Games: (With docs but the box is lost)

Road Raider $10
Menace $6
Batman: The Caped Crusader $6
Barbarian $6
Zany Golf $6
Joust (no box or docs but you don't need them) $5

Misc:

Maps & Legends: The Cartographer
with Datamap Collections I & II $15

CAD 3D 1.0
& Cyber Studio (CAD 3D 2.0)
& CAD 3D Plotter & Printer Drivers
& Cartoon Design Disk
& Future Design Disk
& Cyber Paint $35

ST Sound Digitizer (hardware) $25
ST VT100 Terminal Emulator (hardware) $25

Quartet (music software) $15
Print Master Art Gallery I $5
AEGIS Animator $10

Large box of Documentation $50
(2 Developer kits, a few books, random GEM docs)

Xerox box of Atari magazines w/ disks $35
(All but 3 or 4 Starts, about 10 Compute's Atari ST)

WordWriter ST $4
Thunder (spell checking DA) $5
Flash 1.6 $5
ST Chat $3
ST Talk $3

Mark Williams C ver 3.0.9 w/ manuals and CSD (debugger) $30
MCC Pascal $15
Modula II $6

Quick ST 2.2 $5

Metal Monitor stand (fits over the ST) $8

King James Bible data disks $6

or take everything for $1750 shipped.

2592. GFA-Basic V.3.6TT String Error

```
> does somebody have an idea why GFA-Basic V.3.6TT produces an error when
> more than 1000 string variables are filled:
> index=0
> DO
> a$="anything"
> add index,1
> LOOP

My first guess would be that you need to perform a garbage collection.
Something like the following:

index=0
DO
~FRE(0) !** This line will force a garbage collection
a$="anything"
ADD index,1
LOOP

GFA is not very good at cleaning up after it's own string operations.

Hope this helps...

ha ve been using a DJ600 for the past 6 or 8 months (I think its been
that long) anyway, I have had no problem with DTP using Calamus or
Pagestream. I use the DJ500 driver in calamus, I really should try the
LJ4 to get 600 DPI, I use the deskjet driver in Page steream both are no
problem. Pagestream can be had for a bargain price these days (while
supplies last as they say) form TOAD in the US for $39. (about 25 UKP).

2597. ** HEEEELP! Overscan's dead! **

Newsgroup: comp.sys.atari.st
Date: 1996-08-15 00:00:00 UTC
From: garn9114@kutztown.edu
Message-ID: <4uvjkd$s29@jake.esu.edu>
Source record: 139977

For some strange and as of yet *completely* unexplained reason,
Overscan will *not* work anymore on my Falcon. I installed MiNT, then
tried to go into regular Gem which is where my problems started. To make
a long story short, even with MiNT removed Overscan still does not work.
When the Auto folder hits Overscan, it sets the screen correctly.
All of the auto programs after it write to the extreme left of the
screen. However, when Gem boots up I still have my borders (disgusting
things, aren't they?) I've tried completely getting rid of MiNT,
re-downloading and installing Overscan, all to no avail. I am
completely confused and totally desperate.
If anybody has *any* information they can give I will be greatly
appreciative. Heck, if you can get it to work I just might kiss ya :)
Thanks in advance for any help,

George Garner

Almost any action that requires more than one keystroke can be reduced to a single keystroke with a STorm script. I use storm with a Unix shell internet connection and I have at least 20 scripts that I use. My main logon script logs me on, checks to see who else is logged on, downloads my mail, runs tin and then opens my favorite newsgroup.

One most necessary scrip is:

```
DTR OFF
PAUSE 2
DTR ON
END
```

2605. Gribnif Software is looking for beta testers

Newsgroup: comp.sys.atari.st
Date: 1996-08-15 00:00:00 UTC
From: dwilga@mtholyoke.edu
Message-ID: <dwilga-1508961551190001@138.110.7.161>
Source record: 139985

(Please do not reply to the newsgroup or to the address from which this message was posted. Please only send A NEW MESSAGE to gribnif@genie.com)

Gribnif Software Is Looking for a Few Good Testers

In order to continue our support of the Atari market, Gribnif Software is in need of some beta testers for new versions of our products. Currently, we are working on a maintenance release of Geneva, to be followed by a more major version. Development also continues on NeoDesk 4, STalker, STeno, and CardFile.

A new forum for the private discussion of beta software has been created, and you can be a part of the testing.

Requirements:
---

o You must be willing to sign and abide by a nondisclosure agreement. All information exchanged in the forum is to be kept strictly confidential.

o You must have personal access to the Web. While graphical browsers like Netscape are definitely a plus, they are not essential. The lynx text-based browser will suffice. Messages will be exchanged by way of forms on a Web page, and files will be downloaded by clicking on a link on a page.

How to Apply:

If you are interested, please do not reply to the newsgroup or to the address from which this message was posted. Please only send A NEW MESSAGE to gribnif@genie.com. Include the following information:

o Which of our products you use on a regular basis

o A brief description of your system and the major applications you use regularly

o If you have done any beta testing for other companies

o If you have programming experience, and whether you are familiar with using debugging tools like TempleMon and SysMon

o Other qualifications you feel are helpful

o Your name, address, and daytime phone number

o Your email address, and the URL of your personal Web home page if you have one

Because of the large number of applications we are bound to receive, it will be impossible for us to respond to everyone individually, or to cite reasons why you were not accepted. We apologize in advance for what may seem a rather impersonal approach; it's done purely as a means of saving time.

If you were previously a beta tester under the old system, please feel free to contact us again to join the new forum.

Gribnif Software Tel: (413) 532-2434
PO Box 779 Fax: (413) 532-2540

Be nice now! You might try to get something from the a.a.u.e archive via
e-mail before you jump on me! It no longer works! Seem since "everyone has
ftp access" a lot of the ftp mail bots have been taken down! I had a copy
of that really long text file describing how to get "anything on the
internet" via e-mail, bu tit seems slightly out of date!

>I have the same problem. Another problem I have is that the program
>might crash when I import MIDI-files from the track mode play screen.
>It is OK when I import it from the edit screen.

I remember someone on GEnie saying the hang-up problem when exiting Tiger is less if you use the tape recorder icon, I'm rarely bothered by it but I often save from Tiger before exiting. The MIDIfile bug is well documented but, luckily, it's easy to get around.

The bug that plagues me most is when you are using midi timecode sync in tiger and change the "Display Tracks" dialogue, KCS will no longer stop when the tape recorder stops but just keeps playing until you select a dropdown and then select an option (doesn't much matter which one), man this is frustrating. I use KCS in the studio almost daily and I'd pay a hundred bucks to get this fixed, unfortunately, we'll never see another upgrade

>But Omega is still the main reason why I stick to the Atari, as there
>is nothing like it in the PC or Mac world.

Agreed! I have used KCS since the first C64 version and probably will as long as I can find a working ST.

2608. Decoding AVI files ?

Newsgroup: comp.sys.atari.st
Date: 1996-08-15 00:00:00 UTC
From: paz@wile.demon.co.uk
Message-ID: <840231388_OASIS_@wile.demon.co.uk>
Source record: 139988

Hi All :)

Does anyone know of a program that can de-code AVI files in the same way that
Mpeg Fever de-codes MPGs ?

Alternatively, how about converting AVIs to MPGs ?

Any help would be greatly appreciated, thanks :)

See Ya,
Paz.

Excuse my ignorence in this matter, but I do have what I feel to be
a valid question,
If people are apposed to the ATARI binaries group, then why don't
they simply not subscribe to it?,
Surely this is less time consuming than moaning,

There are a lot of binaries groups I don't like, in fact the names
of some of them make me sick, so I simply don't subscribe to them,
it's a great plan and works really well,

The Captain cuts to the chase:

What you do with the copy that you purchased, short of transferring it to
someone else and keeping a copy (or modifying the code and transferring the
modified version) is pretty much your business under the "fair use"
provisions of copyright law. If you were using Windows NT as a network OS
in a coomercial operation and made changes to the MS code, then MS would
probably sue you (if they found out about it) and, since they can buy more
lawyers than anyone, they'd probably win. But in a case of personal use,
no one really cares; you're not harming anyone, since you bought the
software to begin with, and if the developers are even halfway honest and
decent, any changes you can make by hacking the code aren't going to be
changes that they can charge for in an "upgrade." It's a matter of
legality pro forma - if you own a dongle for the software, and you "fix"
the software so that you don't have to use the dongle, but you don't sell
it or give it away, then you're still within the law.

***** Press Release *****

August, 1996

Subject:

***** OMEn becomes OASES, and Goes Multi-Media *****

* In Brief
* System name
* Macintosh/Power Mac Version
* Other Versions
* Programming
* Movies
* Interactive Textbook, the Multi-Media Literature System
* Download Oases
* Prices
* Availability

* In Brief

Many exciting developments have been taking place at EDLI, and it's about time we told you what they are! We've made the operating system more available and changed the name. Of course, we have been continually improving it, and it's got some features that even Mac and Windows don't have.
The App-Launch program and directory "bookmarks", plus the ability to play a sound or view a picture simply by clicking on the file, help users navigate and find things easily, and behind the scenes, new calls such as picture (RLE) encode-decode provide good support for new items such as movies and shrinking large picture files.
And, at last, we have some software of value to end users as well as to programmers: a means to create your own multi-media literature materials. If our plan for helping people to distribute their creations works out, you may even be able to make money writing such materials.
Everything is on-line (or about to go on line) at our web site (URL at top): the Oases system itself; programming manuals and Eazy-Asm assembler; the premiere edition of Interactive Author, the multimedia literature creation software; and more.

* System name

The OMEn (Open Multitasking ENvironment) operating system has been renamed Oases Open Software Environment (how about "Open Architecture Software Environment System", if you're hooked on acronyms). This is expected to make the system more appealing to many English speaking users, as "OMEn" always seemed to have a little black cloud over it in spite of many attempts to ward it off!

* Macintosh/Power Mac version

The Macintosh version of Oases is on sale. It runs on all tested models from Mac-512KE through Power PC 6100/60. The Macintosh version runs exactly the same software as the Atari version, except for a couple of very machine-specific programs like the Atari-ST VIDI-Recorder. The display, too, looks virtually identical to other versions. Oases for Mac will make use of any mounted Macintosh volume, including file servers and CDs. Currently Supported displays are monochrome, 256 colour and 32768 colour ("Thousands" setting).

* Other Versions

The PC porting is currently on hold owing to the range of other committments, but will certainly be completed at the earliest possible date, hopefully by the end of the year. We expect the current range of products to generate interest in a joint venture for completeing the PC and other portings.

We are planning a joint venture with another company to create an inexpensive single-board OASES "embedded control" computer based on MCF5202, Motorola's new 68000 compatible RISC processor. Becasuse Oases runs the same software on any machine, users would be able to test their software on their Atari/Mac/PC before trying it in the controller (except hardware dependent sections, of course!). This system may later be made available in a general "PC" configuration as well. Speed should be similar to the better 68EC040 systems.

* Programming

A design goal of OASES was to create a system inherently easier to write application software for than other systems. Virtually all the applications for Oases have been written using Eazy-Asm structured assembler. A program can be as simple as opening a window with a call to the Display Manager, and a loop where the program goes to the "postbox" and waits for an applicable event. Shutdown is normally as simple as "_CloseTask". The OASES Programming Reference Manual is only around 400 pages, and can be downloaded from our web site.

* Movies

We've come out with a simple spec to define Oases movies containing animated graphics, still-picture "slides", and sound. Movies are played in the Interactive Textbook program, and other software can easily be written to play movies. The movie spec allows creation of movies and slideshows from any source of pictures and sounds.
And, we've taken a VIDI-ST video digitizer for Ataris and made the

Atari-ST VIDI-Recorder program to create Oases movie animation sequences with 8 different video frame rates and sizes in four or sixteen levels of gray, with aspect ratios for most "normal" displays plus two for "ST-Medium-Rez" mode, with its tall pixels. A 2.5 or four megabyte ST or STE is demanded. The lowest frame rates and small sized pictures give over a minute of recording time on a 4 megabtye machine.
The Picture-Condenser utility program helps to trim down movies with larger pictures so they can better fit on a floppy disk. (Oases 3.38 and above automatically un-condense pictures for display.)

* Interactive Author and Interactive Textbook

These are our "star" programs. The premiere version of Interactive Author is now available on our web site (URL on letterhead). It allows its user to create and use multimedia "interactive textbook" literature on any conceivable topic, for reference works or educational curriculum.
The "pages" of the "textbooks" may contain text, pictures, sounds, slide-shows and movie clips. Page-link buttons dynamically link pages, similar to hypertext.
And, as if that wasn't enough, "evaluation" items add the ability to use Interactive Textbooks for self-paced studies and distance education: all the teacher has to do is sit the student down at the computer. The student cannot proceed through the book without correctly answering the evaluation questions, and so when he/she returns having completed the "textbook", the teacher will know the material in it has been mastered.
We hope to compile a catalog of interactive textbook multimedia literature developed by other authors, and to offer distribution with commissions/royalties for well-written, original-material-only works.
Free Interactive Textbooks are also available for download on the web site... including "Using Interactive Author", whitch contains instructions for creating your own Multi-media literature.

* Download Oases

The Oases system is "protected" by having a colour coded software licence. It may, however, be run without the licence, and is available at our world wide web site: http://www.oases.com/~omen
Without the licence, it is possible to save only small files, and not large ones, to disk. But, it is entirely possible to use it, and to run Interactive Textbooks created by other users. Distribution copies will run as licenced until the end of the month they were released: i.e, OASES338 will save any files until the end of July.

* Prices

Oases system licences, printed software development manuals and software developer registration are the only items for which EDLI currently charges: The premiere edition of Interactive Author and all our other items are free, or available on disk for shipping & handling charges.

Oases-for-Macintosh costs $69.95 Canadian. Oases-for-Atari is $44.95;
or both licences for $99.95. (approx. US$ equivalents: $52.95, $33.95, and
$74.95) Order by August 15th and get 25% off any above item. Order
Interactive-Author Professional Edition for the special pre-release price
of $69.95 Cdn/$52.95 US, with delivery late fall or early winter '96.

* Availability

Oases products are available from:

EDLI (Contact information at the top)

In the UK, Oases is also carried by:

Floppyshop

Say, Wha....? Toad "not cooperating" is most unusual. You can just
drop
by their web page and select this URL:
http://www.ataricentral.com/catalog
This page lets you order a catalog very easily. On the other hand your
friend can either Email Dave Troy at Toad, dave@toad.net and ask for one
or call them on the phone. I have always found both Dave and the
company
to be most helpful. If Dave really wont send him a catalog, send me
your
friends postal address and I will send him one.

2618. Atari World still taking money from Bank Accounts

Newsgroup: comp.sys.atari.st
Date: 1996-08-15 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <81264435_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 139998

I've just had a bank statement which shows a 12GBP direct debit on it!!

As Atari World no longer exists, how come they've just taken 12 quid?

Has anyone else had this problem? I'm onto my bank tomorrow!!

A couple of months ago when they went bust they debited 12GBP from my account and then credited it back a couple of days later, and after that I assumed no more money would be taken! Like a fool I didn't actually cancel the direct debit!!

Yours (12 pound poorer),

Gary.

> Does anybody out there know if it's possible to change the standard
> desktop font in TOS 2.06? It gets a bit annoying on the eyes after a few
> hours. :)

It is possible to change the systemfont in your TOS 2.06. To do that you
must program new eproms (27C1001-150).
There is a german archive TP206V38 that contains a lot of patches for
TOS 2.06. Among other things you may change your systemfont.
Unfortunately the addresses of the patches are only valid in the german
TOS 2.06. I have adapted the most important patches to the UK_TOS_2.06.
The addresses of the patches in other TOSses_2.06 may differ from those in
the UK_TOS_2.06.
If you are interested I will upload a patchfile with the patches I adapted
and also with about 10 bytes of code starting at the beginning of each
patch. So you can find easily the start of the patchaddresses in your
TOS 2.06.
BTW: I do not have a TOS 2.06 for you. You must get it from your computer
or buy it. Only the patches are available.

Gr, Piet Mulder.

That would be me! :^) :^)

>3) I know about the Quantum Fireball incompatibilities, and I'm
>staying away from all Quantum drives for that reason.

Oooh, no, you don't want to do that!! As Uwe already posted, the
problem with the Fireball isn't all that bad if it's not your first
drive. But I just got myself a nice Quantum VP32170S for my four-bay
external SCSI case! :^) It works beautifully, and has a five-year
warranty! They're very reliable anyway. So don't swear off the
Quantum line just because of one single model you can't boot from!

#define SOAPBOX

One of the few things I'm happy with Atari for at the moment is for
at least giving us a true standard SCSI-II interface so we can use
SCSI cases and 2GB drives from the PC world! That and the superior
sound hardware that is still better, *standard* on every Falcon,
than the PC's have. I'm not thrilled about the CPU speed or the
graphics; as I see it, two pressing needs for my Falcon MK-X are an
AfterBurner and a Nova graphics card. :^(Okay, and I appreciate
the DSP, too!

2626. Lottery Companion 4 Beta Available from Web site

Newsgroup: comp.sys.atari.st
Date: 1996-08-15 00:00:00 UTC
From: Mark Butler <Mark@dwell.demon.co.uk>
Message-ID: <Va32oBA8S5EyEwC8@dwell.demon.co.uk>
Source record: 140006

Lottery Companion 4 Beta test version is now available on the Web site shown in my sig.

Everyone is free to download a copy for evaluation - and current Registered users can obtain a new LC4.KEY file by Email on request.

Your opionions and ideas are very welcome.

Four months and approx 3000 lines of extra code have really improved the program.

Here are a few improvements ...

Lottery Companion v4 Update
------- --------- -- ------
Version 4
------- -
There have been so many changes to produce this version that I can't hope to list them all here.

Nearly every existing routines has been improved, including the display routines which are now faster.

Report screens such as History have had extra information conclusions added as well.

So here are the new bits.

File Menu
---- ----
Check PRM file - Checks PRM files do as they say, Allowing you to experiment with your own. Note the new PRM file selector.

Make PRM File - Converts an LCD file to a PRM.

View PRM File - View as if it was an LCD file.

Edit Menu
---- ----
Edit PRM File - Edit a PRM file as you would an LCD file.

Reduce Number Sets - Reduce the number sets in your LCD file Randomly or by their Mean values.

Pick Menu
---- ----
Inc/Excl - New Method, Up to 5 Numbers can be included in all Number Sets and 20 Excluded.

Perms

Pick you PRM file using the new Perm File Selector and create your Number Sets from it. Allows you to use any PRM file as well as the 30 standard wheel ones - including the famous 174 and falling ! Match 3 out of all 49 balls.

Report Menu
----- ----
Draw Colours - Version of Pattern Report that concentrates on the ball colours.

Ball Draw Occurrence - Lists Balls and where they have occurred in draws - Including Min and Max gaps between them being drawn.

Ball Occur Hot/Cold as previous Report but sorts the Balls in to draw Frequency order.

Number Set Performance - Shows you how well you have done over previous draws.

Number Set Future - Predicts how well you will do in the future.

Syndication Menu
----------- ----

Membership - Store details of all your Syndicate Members - Also allows automatic monitoring of their credit so you know when to ask them for more money. (Registered operation only)

Operation - Store how the syndicate is run.

Accounts - Store every transaction made on behalf of the syndicate.

View Credit - Lists every members draw credit

View Membership - Lists all Members details.

View Operation - Lists Syndicate Operation information.

View Accounts - Lists every transaction along with running totals.

Mid Week Draw
--- ---- ----
Should a mid week draw be introduced - Lottery Companion 4 is ready for it - Just select the Draw day as Wednesday when inputting the first mid-week draw and the program switches automatically to two draws a week.

The Draw Range Selector now allows you to specify the exact draw range rather than just All, Last 10 or Last 50, And also allows you to select the Draw Day.

The Filter also includes a Draw Day selector.

I'm now busy re-writing the massive manual.doc - Hopefully this won't take too long.

ALB.
Mark Butler, Atari ST Shareware Programmer.

2627. Super boot v8.1 and sound files

Newsgroup: comp.sys.atari.st
Date: 1996-08-15 00:00:00 UTC
From: slider@bertste.demon.co.uk
Message-ID: <840148426_OASIS_NEWS@bertste.demon.co.uk>
Source record: 140007

Can anyone help by telling me what type of sound files I can use with Super boot v8.1?

What are DMA and Digi?sound? And where can I get them from, or whatsoftware do I need to produce my own.

I must admit MIDI is something I really know very little about

Thanks for any help

Robert stead

sad to say, but "eagle" has reaffirmed that our educational system has truly
failed us.

no doubt he can play video games, surf, skateboard, etc.; however, he lacks
the qualities that are truly important......

A NEW TOS version??? That would be nice. Not that I have anything bad to
say about 2.06 (I'll never go back to an older TOS version!!!), but hearing
about this makes me curious. More features perhaps..
Any details about it all?

: What I need?

You can NOT hook up an IDE hard drive to the Atari series of computers, they only support the MFM and SCSI and you need a special cable for both of them. The SCSI you will also need a plug called Link II (I recommend this one over the orginal one just called Link).

Actually, way back when I just started doing the internet thing, I had (and
still have,) a Freenet account. Soon after I discovered the ftpmail
servers, National Capital Freenet (Ottawa, Canada) policy changed and I
got the proverbial 'slap on the wrist' for using ftp-by-mail. This _may_
not always be a resource of last resort.

In order for the RFD to stand any chance whatsoever of passing, a
comp.binaries group must be moderated. This is one of those unwritten laws
one hears so much about. <G> For those who prefer an unmoderated venue,
alt.binaries.atari has been newgrouped (several times) and, while
distribution is spotty, is available from many sites. I can personally
assure you that the moderation this time 'round will be responsive and
active.

The discussion group, while not strictly necessary, (of course, the
whole Internet is "not strictly necessary") will help to segregate the "why
didn't my cracked copy of Lemmings get posted?" from "who has a good
routine to read the system clock?" and thus relieve clutter in c.s.a.* (at
least, that's the plan).

As for ftp sites, all I can say is, "wait until next year."

Alan Page, the author of the original Flash is also the author of STORM.
STORM was his answer to Flash 2 (which was written by someone else).
I wrote a letter to him in Canada fairly recently, however I never got a
response. I believe that he has moved on to something else. If you like
Flash, then you will love STORM. The only problems with STORM (that I
know) is that Y and Z Modem do not work correctly with my internet
provider. Atari BBS's are a little more flexible and handle STORMS Y and
Z Modem problems OK. If I am going to be downloading alot off the 'net,
then I run Teddy Term (v2.0) and then Storm from with Teddy Term.
Otherwize, I just use STORMS Y modem which will capture the file OK (you
just have to click abort when no more data is being transfered).

When you go to import them, you can select import as "object". Then it
is a simple matter to paste (alt v). You can also do a proportionally sized
paste by holding down the shift key when you do the "alt v" paste and
dragging to the size that you want.

Digisound is the old Microdeal sampling package. It saves .SND files.
Superboot renames them .Snn where nn is the frequency in KHz. There are two
freeware progs called DigiEdit and SCONVERT that will let you convert them from
other formats. DMA stands for direct memory access. DMA sound is available on
STe's and Falcons. I think you need .AVR files. The UMICH archive mirrored at
Imperial College has a few sample files.

>I must admit MIDI is something I really know very little about.

Nor do I. Doesn't have much to do with Superboot though...

Have Fun,

Hmmm, as long as we still prohibit MOD files (which do have an appropriate venue for distirbution), I think we might consider Atari-specific files. Technically, the "chip music" files for both the 8-bit and ST series probably could be considered binaries in that they are obviously not graphics nor text, and they aren't useful on any other platform.

8-bit graphics files are so tiny (<=8K as I recall) that I don't have a problem with that, either. ST-resolution graphics would have to be pretty special to qualify, though; 32k isn't huge but it's big enough to be a nuisance if a lot of them are posted, and frankly, while I love the systems, I am underwhelmed with most of the graphics that have been produced for it. This is a case where I think http distribution does make more sense.

Kyle, your opinion, please?

Unless your VCR has RGB analog outputs (and I don't know of one that does),
you can't use it with an SC1224. The SC1224 requires the following
signals:

Red
Green
Blue
Hsync
Vsync
Ground

>Thanks. Reversely, How could I plug my Megaste (it doesn't
>have a modulator just the atari slot) into my TV (only antenna)
>Bye.

I'e never heard of a Mega STe that didn't have a modulator! Is there not
an RCA jack on the back? The older Mega ST did not have RF output, but I
was under the impression that all STe machines, including the MSTe, can
with modulator. I know mine did, at any rate.

Regardless, if for some reason yours doesn't have an RF modulator, you can
use the Video Key or similar device to create both composite video and
modulated RF output from your monitor port. I dont' know if Toad still
carries it, but certainly either Computer Direct or Toad can tell you where
to look.

>The only problems with STORM (that I know) is that Y and Z Modem do
>not work correctly with my internet provider.

>Otherwize, I just use STORMS Y modem which will capture the file OK

I execute XYZ (Starfall Software, shareware) from a Storm script for
Zmodem. It locks out any multitasking but it's very solid. Storm's Y
modem does work but is slow.

My download script works like this, I do a ls -1 and then highlight the
file(s) I want to download and copy them to the capture buffer. When the
script is run with a function key, the capture buffer contents are read
into a string array, storms sends the sz -b plus the filename string
to initiate the download and then passes the filename as a parameter
to XYZ. After the file is downloaded, the script deletes it from my
Unix storage space. If there is more than one file, the script loops.

Kyle R. Hofmann (rhofmann@crl.com) wrote:
:
: REQUEST FOR DISCUSSION (RFD)
: moderated group comp.binaries.atari
: unmoderated group comp.binaries.atari.discuss

Is it possible to just use comp.sys.atari.st to discuss stuff in comp.binaries.atari? Why create comp.binaries.atari.discuss? I know I won't go looking for something in c.b.a. unless I read about it in c.s.a.st as I don't intend to poke my nose in there if I can help it. Also, does it have to be moderated? Seems like that was the cause of problems before. And then, of course, comes the issue of: do we really need this. Right now I'd say we do, primarily because there is no satisfactory ftp site. I wish we could set up a really nice network of ftp sites (one in US, one in UK, one in Germany, France, etc...) that all mirrored the complete archive. U-Mich used to do this, but seems to have gone all rough around the edges.

2646. ST Gaming Digest/other comprehensive listing of Atari games

Newsgroup: comp.sys.atari.st
Date: 1996-08-16 00:00:00 UTC
From: hummus@pipeline.com
Message-ID: <4v0gku$i0h@news1.t1.usa.pipeline.com>
Source record: 139917

There used to be an excellent online ST gaming magazine called ST Gaming Digest. Every month, it would list all the games that came out for the ST both in the US and abroad, the company releasing it and its country of origin, and a one or two line summary/review of the game. It also comprehensively listed every game that had been released over the previous year, games in the works etc. STGD was released on either a monthly or bi-monthly basis, depending on which month/year it was, and had an RT on GEnie called STGaming Digest or something of that nature. The Genie address of the author was ZRATH-SMILEY, and his real name was Eric-Alexander Bitton. The first issue I have is November, 1991, and the last September, 1993.

Does anyone know what happened to this fine publication? In the 9/93 issue, the author writes "see y'all in November" or something of that nature, but a November issue never appeared! I no longer have access to GEnie, so I can't check the RT there, does someone who is on GEnie know if it still exists? (I think it was CATegory 22 or 27). Does anyone know if the author is still on the Atari scene? He obviously worked very hard to put that magazine together, as it probably involved calling every STgame manufacturer in the world every month. If STGD is gone, does anyone know if there exists any other magazine/source like it that comprehensively lists every game ever released for the ST, either in print or electronic? Perhaps some web site somewhere has archived all the data? I would be much obliged for any info...

Thanks

2647. STe cart port

Newsgroup: comp.sys.atari.st
Date: 1996-08-16 00:00:00 UTC
From: Rod@gaiasys.demon.co.uk
Message-ID: <96155386_Beta03_OASIS_NEWS@gaiasys.demon.co.uk>
Source record: 139918

CAN YOU HELP!!??

I'm after any sort of circuit board that will fit into the STe cart port.
old clock, game, op sys, anything that fits.

I'm trying to make an extension so I can move the clock module inside the
case so the kids cant bash it. It seems that Atari have used a strange size
for their connections on this board and i cant seem to find a piece to match
and I dont (now) have the gear to make my own.

private e-mail to save bandwidth to rod@gaiasys.demon.co.uk

cheers

Mario Becroft (mbecroft@tos.ak.planet.gen.nz) wrote:
: I recently heard of a program that allows Atari TOS machines to get a
: "Start" menu, similar to Windows95.
:
: What is this program called and where can I obtain it?

There is a program called "Start Me Up," but I think it only runs under MagiC. You can read about it at the InterActive support site:

http://www.compulink.co.uk/~inactive/software/start.htm

You should be able to download from that address shortly as well. This is a beautifully designed page, by the way. Kudos to Joe Connor. All these people updating their web pages over the summer, I'm going to have to join the fray. Stay tuned for the next exciting installment of the Yolo Atari Club page ;-)

>Specific examples of disallowed software include:
>
>- Pictures, music, and other non-software binaries

As it stands, there currently is no repository that I am aware of that supports pictures or music files. I collected the 8-bit Atari .MOD music files, and would like to be able to trade and/or collect more titles. As far as I know, there are no copyright restrictions on the MOD and related music files because they were generally released anonymously.

A blanket prohibition on all music files to be overly restrictive. The music and picture files specific to the Atari 8-bit computers are small, hard to find, and tradeable. I would like to see them allowed. This request does not extend to .jpeg, .gif or other modern formats, nor to material that is already prohibitted from the Internet.

Please modify the proposal to allow music and picture files specific to the Atari 8-bit computer to be posted.

Contrary to previous posts, I believe a German outfit made an IDE host for the ST line. The only drawback was that a cable ran out of the ST case to an external hard drive. System Solutions (www.ssolutions.com) may know more.

The 520STFM can use either an Atari RGB monitor or any composite
monitor(with a cable that utilizes the FM modulator). I used a
520stfm with a Commodore 1571 monitor for years with a Practical
Solutions cable.

: Does anyone know if someone is working on long filenames for Magic4 or do we
: have to wait for Magic5? I for one could really use long filenames and don't
: really want to wait a year for Magic5 to appear in the UK :(

1. MagiC 4 can use long filenames either on a Mac (only MagiCMac) or
on a CD-ROM (using CDROM.XFS) or on a RAM-Disk (RAMDISK.XFS). But you
have to install a modern shell (i.e. any shell except Ease < 5.0).
2. I completed MagiC 5 UK last week. It is the version 5.02 that has
a couple of bug fixes, compared to 5.00. There is also a french
version 5.02.

>my mail, runs tin and then opens my favorite newsgroup.

Can I go back to this topic, which I have broached before?
Nothin in the world, and I include programs Windows, MSDOS, DEC,
Macintosh and Commodore (I have worked with ALL of these) is as simple
to use, as intuitive, as clever as the old FLASH. Every time I try to
change, and I have changed to STalker 3, Connect, and Freeze-Dried
Terminal, I have gone back to Flash 1.6.
I would like to PLEAD with whoever owns the rights to Flash
code.
Leave it alone. Don't screw with it. Just ADD color support, Zmodem
support, and higher modem speeds. Otherwise -- PLEASE DO NOT ATTEMPT
TO IMPROVE IT.

Skip Flash II. Skip Connect. Skip FDT. Just take the guts of
the best terminal program ever invented and bring it up to date.

If you wamt more comparisons--
yes. I have used Connect, FDT (Atari); Delrina Winfax, Quicklink II
fax, MIcrosoft works Comm (MSDOS; Smartcom (Mac and Windows), Microphone
(Mac); Telix and ProComm (MSDOS and windows), Desterm and Dialogue
(Commodore).

Where are you, Flash writers? Come back. Save us from mediocrity
and general protection faults.

George, it sounds like you have managed to set the NEWDESK.INF file to
shut overscan off. (i.e. if you save the NEWDESK.INF file while not in
overscan, or you have installed a NEWDESK.INF file that does not contain the
line for overscan) To rectify this, simply remove (not necessarily delete)
the NEWDESK.INF, and see if the problem goes away for you. I'd tell you
what the line is to set overscan to on, but the truth is that I have both a
BlowUp and a ScreenBlaster, so I don't use overscan anymore...let me see...
Well, here's a NEWDESK.INF file that gives you overscan (without using any
program to do it. - simply save the text between the --'s as NEWDESK.INF or
whatever(mine was called OVERSCAN.INF). If you change it at all, simply
make sure that you're in overscan (768x480) before you save it, or you will
lose the overscan. Here it is.

: [This is a draft version of an RFD intended to be posted to
: news.announce.newgroups soon. It is being posted to the comp.sys.atari
: groups for feedback before the final submission to David C. Lawrence,
: the news.announce.newgroups moderator. Please give us your thoughts on
: this proposal. Thank you. --KRH]

: Currently, there exists no appropriate and easily accessible medium
: for the release of Atari software. There is also a growing pool of
: software available for these machines which would recieve a
: marginal distribution at best due to this lack of a medium.
: Though FTP sites and several binaries newsgroups
: (alt.binaries.comp.atari8bit and alt.binaries.atari) exist, many
: Atarians do not have FTP access and the alt groups have a poor
: distribution.

You need to specify what kind of Atari software is going to be on here
(8-bit, ST, TT, Falcon, whatever). Seems one user seems to think this is
for ST stuff. I'm not even sure what format this is going to be for, myself.

And if this is for 8-bit, there's already an 8-bit binaries group that
doesn't get wide distribution.

Actually, the only "hardware mod" for using a Mega STe at up to 115200 is a "Y"-adapter cable for the Modem2 and Modem1 ports - there are a couple of pins that aren't connected on Modem2, but using HSmodem in "M1EMU" mode (that's "Modem1 Emulator," not some great flightless bird <G>) those signals can be taken from Modem1. Then just edit your FZDT*.CFG file to change the baud rate to zero, set the port speed using some other program (I let Semper do it, but it could be done by HSmodem itself, I think), and FizzDizz is perfectly happy to run at whatever speed the port is set to. It says "0" in the status line, but it will connect at your modem's best speed.

On the same subject: Does anyone have an English transaltion of the docs with the 38400.LZH file? I think I can puzzle it out, but my Deutsch is very rusty, and I have three 1040STs that need faster serial ports.

In article <4ur9vg$ekf@Einstein.ebicom.net>, bjr@edison.ebicom.net (Brian Roland) wrote:

:reason from this programmer. A good example of this was the release
:of KCS Omega under Dr. T. In the beginning it was heavely copy protected.
:The coustomer base in the beginning was so good at sharing the rewards
:and problems of this tool, that the copy protection was quickly removed
:at the request of their present coustomer base. I'm sure there've been
:a few theives out there who grabbed a copy of KCS for no good reason
:other than sheer greed...but these few people never really USE the tool
:anyway, and wouldn't have purchased it even if it were copy protected.
:A few others who did steal it with the intention to USE it...sooner or
:later ended up buying the package for support and upgrades anyway. After
:all...back when KCS was a top dollar sequencer...it cost nearly half as
:much as the package to run off the documentation on a copy machine, as
:this particular package put almost as much money and effort into producing
:good comprehensive documentation as they did in the actual software.

This is hitting the nail on the head. Exactly. In fact, I was one of those who was at first using pirated versions of KCS are I stumbled across it and found it to be quite advanced compared to all the 'other' pirated sequencers I had. You see, I had Pro-24, Cubase, Notator and some others, all copies, but for me, I was glad I had cracked copies mainly because I realized that all of the other sequencers were completely unusable writing tools compared to KCS. If I had to spend $400-$1200 a pop on sequencers just too see if they 'sucked', it would of been devastating. In fact, I did just that at one time, buying Cubase on a whim when I really was happy with the cracked KCS I had only to find the $400 Cubase was sluggish and crashed 1 out of 10 times everytime I used it. KCS crashed 1 out of 100 times and was a lot faster.

Point being, piracy to the serious user only means they can try and it and if it really is something worth while and not somethng that isn't going to live up to your expectations, then the serious user will want to support it in the end, if not just for the manual. I realized KCS was amazing after spending $400 on Cubase and ended up getting so into it, that I became one of their main beta-testers.

I also, regardless of being a beta-tester, sent them the full retail price for KCS when it came out as well as getting their Phantom interface.

Other software I pirated back then had the same effect. You use it, if it sucks or isn't interesting, it gets filed away or erased. If it's way cool, you end up wanting to get support on it and buy it.

Hense, shareware was born which I feel is the greatest thing since sliced bread. Try before you buy... weeds out a lot of fluff out there that's really mediocer software with high price tags.

This is not de-fragging of the drive, just of files be renaming them
and then copying them to a new file. This is done because GEMDOS gets upset
if a file is split into more than (we believe) 10 pieces on the drive.

The one tough bit about PageStream was installing the font "suitcases" (or whatever they called them). It's been too long since I did it to remember step by step how to describe it. But if you follow the instructions in the manual it _does_ work. I just remember the problems stems from there being multiple places you have to click on the "save settings" type button.

: get. I also have a problem importing graphics. They import on a separate
: screen which doesn't seem to relate to the "real" document. I just picked

This is because you have your default settings set so PageStream loads graphics into a window to allow you to crop them before placing them in the document. Just select a portion of the picture and copy and paste it into the document now. If you want PageStream to skip this step, you can change this setting (check your manual).

I have just subscribed to ST Report, and received my first copy.

Unfortunately, to my horror, they only send out 1.6 meg PDF files, and not the 57k ASCII files as I said I wanted on their subscription form. (As I have to pay for my data, this glitch cost me $9 instead of the 17 cents it should have [read: US$6 instead of US$0.12])

(I emailed them, and Ralph Mariano said in reply that they only do PDF and will not be carrying the ASCII version for much longer)

It it coming closer. In theory it should already have been there and, indeed, it is. I mean, the official release date of "ST NEWS" Volume 11 Issue 1 & 2 (yes, it's a double-sized issue!) is July 26th 1996, exactly 10 years after the release of the first issue. It will be the final issue. I am hard at work to finish it. It should not be more than another week, and certainly not beyond the next weekend. I already have 100 articles, almost 2.4 Mb in size. It's going to be a corker of an issue, I think.
I won't lift any of the veil yet. What I *will* do, however, is tell you that I will send out a message when it's uploadable (and *where*) as soon as I know. If you want to get that message, send me a simple request to be put on the "Atari list". That's all. If you don't object to 3 Mb of UUencoded shit in your mailbox, I might even be tempted to send you the whole thing, lock stock and barrel. You decide.

Bye!

George,

I'm sorry that I can't help but I get the same condition on my TT. What computer
are you having this problem with?

I too would be happy to find a fix to this problem. I was recently at a computer user group meeting (WAUG - Ann Arbor, MI) and one of the members
had some success at home with Mintnet and CAB using a dialup PPP account.

You might want to give that a try, although it seemed to take quite a bit to
set it up.

Does anyone have docs on how do do this?

Thanks,
Neron

Raw unsigned 8bit samples.

> What are DMA and Digi?sound? And where can I get them from, or whatsoftware
> do I need to produce my own.

Digisound can be found at Umich. Its called "digisnd.arc" or somesuch, look
for a 300k ARC file in the sound directory.

I think you'll be better off with 525 though, it can convert WAV and AU files
to something you can use.

I'm considering upgrading my spreadsheet software. I'm currently using a registered shareware package called Sheet V3.2. It worked fine on my STe, but since I switched to a TT I've noticed some incompatibilities. I'd like to get some opinions, from users of other packages, namely LDW Power, 3D Calc and K-Spread.

Some questions I have are

Will it run on a TT030?
under MultiTos?
Mint/XaAES? |
or Mint/OAESis? | I haven't done anything with these
last two, but who knows...

Can you define multiple graphs per worksheet rather then one graph definable at a time? (This is what Sheet has.)

Does it have a powerful, but easy to use macro/programming language? Sheet has a BASIC like programming language.

I guess that's all for now.

That is an understatement. The whole point of the new binary group would
be to give it wider distribution. Very few of the ISPs in my area, and
none of the universities I've heard of accept alt.binary- anything.

I expect the new binary group to allow both 8-bit and ST stuff, although
I am only interested in the 8-bit.

MagiC5 und der ScreenblasterIII V 1.2 laufen zusammen..

I found a way to work nice with M5 AND SBIII.
Watch out for the following steps:

First i have made a simple backup from drive c.
After this i delete ALL on drive c by format C (and only format C !)

(What's the right description for "partitionieren" ??)
(Sorry, i can't found the right english words for all this..)

Later you have to install magic5.00 /5.01 or 5.02 new from your disks
or simply form another partition of your harddrive.
Make sure m5 is ready to work nice on this machine.
After m5 install SBIII NEW from your SBIII-Disk!

Don't use ANY .INF from Backup!

Create a new Folder: C:/SB_RES/

Copy all your SBIII .SBR-Files into this new Folder.

Start SB_MONI and declare this path as your .SBR-Path!

Make sure your SBIII-Resolution works nice with single TOS 4.04.

Reset, and boot your machine new.
M5 start and will launch MAGDESK with 2 Colors.

Suprise, suprise...

M5 and SBIII are still working.
After arrived in MAGDESK open "Settings" and look for your own screen res.
Maybee 16 Colors or also..

Don't forget to SAVE this setting!
Don't forget to SAVE MAGX.INF after..

After MAGBOOT.PRG you must start SB_AUTO.PRG (V 1.2) !!
C:/AUTO
MAGXBOOT
SB_AUTO
and all the hole rest..

Boot your machine again...
You will have a nice look to your SBIII-Blasted Desktop after bootsequence..

If you have a nice SBIII-Res. copy all you other .PRGs/.ACCs from
your Backup to yourt Drive C:

D o n o t u s e A N Y .INF from your Backup!

OK, in this way m5+sbIII works on more as 7 falcons here..
I hope you can fix you problem with this simple trick.

(sorry, most i can't found the right english words to describe all)

Some german readers can found all in the latest release of doitf03h.zip
I don't now what's going on there, that's my way to get an nice desktop!

regards, robert

2689. NeST WWW pages updated.

Newsgroup: comp.sys.atari.st

The NeST WWW pages were given another major update today:

URL: http://www.nest.demon.co.uk/

- More Atari links being added.

- Due to popular demand the pages of red haired girls have also been exapnded and refined, including more pictures, as well as bits of data about each girl.

- Oasis2 Comment lists now included with all the latest data on Oasis/ICE development.

- Number of sub-document links increased.

- New NeST logo replaces the initial incarnation.

- Opinion poll revised again (it should now work, if anyone cares to test it out it would be appreciated).

- List of NeST users incorporated detailing NeST and Internet address's.

Remember we are always looking out for more links so if you want to be added to out links pages just let us know!

As usual any feed-back is greatly appreciated.

From: josk@stud.unit.no
Message-ID: <4v5fct$62@due.unit.no>
Source record: 139812

It works now! Thanks for the tip!

: Create a new Folder: C:/SB_RES/

This was the critical point. I created this folder and copied all the SBR-
files to it, and SBIII works! I didn't have to reinstall anything, but I
use MagiC 4.01 and not 5.

: M5 and SBIII are still working.
: After arrived in MAGDESK open "Settings" and look for your own screen res.
: Maybee 16 Colors or also..

This didn't work. If I started sb_auto _before_ NVDI, the SB-menu didn't
appear. I believed that the new resolutions were available from magxdesk,
but that wasn't the case. So I started sb_auto _after_ NVDI, and the
SB-menu is available as soon as AES gets initialised. Just as well, I use
Thing anyway :)

From: Martin.Byttebier@ping.be
Message-ID: <840399774_OASIS_@ping.be>
Source record: 139813

Hello Atarians,

I'm designing a webpage for a Belgium Aquarist Club. I've done the
design completely with Everest and Cab. The pages looks marvelous
when viewed with Cab. Netscape 2.02 however seems to have some
problems to display correctly the pages. For example: The mainpage
(index.htm) contains a table of wich the left side should have a
pale yellow (#FFFFCC) colour. Cab displays this very nicely,
Netscape not at all.
I wonder if someone could take a look at the sources of the pages
to see if I have done something wrong.
All the pages should have a background picture and all the tables
except one should have a backgroundcolor.
One but, the pages are all in Dutch.
The URL can be found on my sign-off.

Thank
Martin

There are no stores or shows for Atari in NYC. There are a lot of individual users whom I've met - but no usergroups. If you'd like, drop me a line at Delphi and you could check out my setup. I've got a LOT of shareware - the advantage of a CD drive and a gang of Atari CD's ;)

There is almost no copy protection that the software publishers could
create which couldn't be hacked by the Atari pirates. From what I saw
the only people that protection stopped were the usual ordinary users,
who don't know squat about cracking, who if they had the oportunity
would just bung copies to friends.

To stop this sort of piracy would have been very very easy. Why the
authors had to go overboard is beyond me, they proably only lessened
piracy by 1% by adding all that extra protection, and in doing so
reduaced the chances of the game working.

> games, even if they don't have to pay a dime.

IMO the last reason along with one of the following is the most... looking
back through STF issues, its plain to see that most games realeased
were complete DROSS, rehased code and ideas. There were notable
exceptions, the lemmings, and Midwinters of the games scene... but I
would say that 80% were complete rubbish.

>
>: JP> I literally have at least 10 carts that I need to be able to

I think you've got to remeber the company is out to make money, if
they can sell you a solution to a problem they originally caused they
often will.

>
>: JP> When is someone going to figure out

>: JP> that you can sell ten times as many pieces of product at $100

>: The sad fact about it is that it can't sell more, because of the piracy. The

CRAP

>
>I can't agree with that. If audio CDs sold for $100 each, how many CDs
>would you own? I might have two or three. Currently I have a huge number
>of CDs, probably thousands of dollars worth - the point is that it is
>easier to spend larger amounts in smaller increments. As long as games
>are $70, and music is $15 - music will always outsell software.
>

and this is why the number one PC game, has so far only sold 15000
units... because they want 40quid odd for the game. Why can't games
developers realise that they can shift tonnes of games, if they follow
this:

a) good games, crap games aren't going to sell
b) copy protection which stops casual piracy
c) a very low price

>People always say "Oh, but the audio CD market is much bigger than the
>Atari game market" - I say, a market is what you make it. If mediocre
>games that rarely function properly sell for $70, the certainly few people
>are going to buy them. If good games sold for $15, the sales would be
>very different.

its not just atari games though... the same thing is happening in PC
games now, the softies, are wondering why they only sell 15000 copies
of their number one game !

>
>: I will continue buying the software I use - regardless of protection or price -
>
>: as long as I need it for the things I want to do with the aid of my computer.
>
>And I will do the same - I will pay regardless of the price or the

>nonsense. This is, after all, supposed to be a comsumer driven market.
>
> Aloha,
>
> John Perez

I won't pay over the odds for software.... I just won't use it.
I'm not going to give over my money for something I don't think is
worth it..... and the same applies for shareware.

Also somewhere in this thread someone implied that pirates sold their cracks. This imho is mostly tosh.

Way back at the beginning of piracy it was laid out that most crackers would and did give away their pirated software free.... the people who made the money were those who did the car-boot-sale jobby, even though the cracks were free.

Despite all this Piracy cannot ever be justified _ever_ as being right... regardless it will always be wrong. However I think the software industry should open its eyes, and stop keep blaming pirates for all problems, as has been stated above, most of the problems are self inflicted.

ATb.

2696. * Looking for Fnordadel *

Newsgroup: comp.sys.atari.st
Date: 1996-08-17 00:00:00 UTC
From: Callum.Lerwick@flight.org
Message-ID: <73d_9608171542@flight.org>
Source record: 139817

Me and some sysops in NJ are looking for the lastest source to Fnordadel BBS. We have the full v1.32 distrib, and upgrade patches to v1.33-38 binaries & source. And we have a binary-only upgrade patch to v1.35. They have been searching for the source to v1.35 for years, but they havn't tried the 'net. So here I am. Here are all the messages they posted to the CitaNet: (in random order... :P)

96Aug07 10:14 am from IGnatius T Foobar @ Uncensored _ IGnet
Wasn't the other Fnordadel developer "Elim" ?? That name seems to come to mind...

96Aug06 8:41 pm from Bob Kifferly @ Gateway _ NJ
Arthur Dent is the one we're looking for.

I hope he took a towel with him.

96Aug06 11:29 am from Mike Hopkins @ JACS _ NJ
Elim @ Secret
Mr. Neutron @ RT

Correct, they took the STadel code and made Fnordadel. Arthur Dent took it from them, added stuff, then dropped off the face of the earth.

96Aug03 9:39 am from Five Fresh Fish @ Bistro _ BC
Fnordadel was originally written by Mr. Neutron and ??. In real life, they posed as Royce Howland and ??. One of them is/was married to Samcat, real life name of Deb. They all lived in Edmonton and attended University of Alberta. I believe Royce worked for The Brick warehouse as the computer programmer/manager. I'm mortified that I forgot ??'s names!

96Aug01 11:41 pm from Mike Hopkins @ JACS _ NJ
Bob.. Arthur Dent. What was the name of his board in Utah?

96Jul31 11:38 pm from Bob Kifferly @ Gateway _ NJ
Mike.... I think so. Wasn't there a "Ford Prefect" and ....um...

96Jul31 9:18 pm from Mike Hopkins @ JACS _ NJ
There were two sysops from two boards running Fnord. I thought they both were behind the support. Fluffadel?

96Jul31 6:56 am from Tony Preston @ The Amiga Zone _ NJ
I tried a net search on Michael Moncur with no hits(www.switch.com which is a sort of yellow pages).

96Jul29 7:46 pm from Bob Kifferly @ Gateway _ NJ
Ig.... I agree with you 100% on getting the political caca out of here.

Anyway, a numbe rof us have been trying to locate the source code of
Fnordadel (v135-0) for a couple of years now with no luck whatsover.

Anyone in here know anyone from Utah? :)

Anyway, if you know anything, please mail me. We would also be interested in
hearing from anyone who is still running a STadel/Fnordadel system, or has
run one.

Hello, All

Does anyone know why I can only seem to get NOS half working with
Compuserve. I can get news and send e-mail but I can't get CIS to send me
my e-mail even though I know there's some waiting for me, also whenever I
try to post to a newsgroup I get this:

480 Transfer permission denied

I've tried a few different groups just to be sure but get the same
result each time.
I've seen at least a couple of Compuserve addresses in here in the past
so if you're out there and you're using NOS successfully I'd appreciate a
peek at your STARTUP.NOS file or failing that any tips that you feel might be
helpful.

2703. Hi, Few primary questions.

Newsgroup: comp.sys.atari.st
Date: 1996-08-17 00:00:00 UTC
From: DCroker@mettav.demon.co.uk
Message-ID: <17762_DCroker@mettav.demon.co.uk>
Source record: 139876

This message from Harry to kellis@primenet.com came in on a wing and a prayer...

Hi Harry!

HS> *Hi Katherine*, on 10 Aug 96 you wrote:
k>>
k>> Hi guys, I am really confused about few little things.
k>> First: I would like to know, what is a good order in the auto
k>> folder.
HS>
HS> It's a good question and it's often a problem, but I'm not sure there
HS> is a good answer to this tbh. It depends what you run with.
HS>
HS> For example, my own running order is:
HS>
HS> REDIRECT ; redirect screen output to graphics card
HS> MAGXBOOT ; Magic (forces reboot)
HS> XBOOT ; Boot manager
[cut]

I'd like to add the advice that once a suitable running order has been found for the auto folder that a careful note is made of it, then if the C drive has to be restored from a backup then the running order can be determined quickly.

Xboot has its own resorting routine and there are others in the PD, notably Autosort.

Speak to 'ya later!

They make a LOT of difference, especially if you have over (say) 1 meg of
memory.

I run Pinhead in my auto folder which takes care of the remainder of progs
that don't already have the fastload bit set in the prog header by the
software writer, also note that TOS versions below TOS 1.4 don't support the
fastload bit.

2706. Unpopulated f030 RAM board: how much $

Newsgroup: comp.sys.atari.st
Date: 1996-08-17 00:00:00 UTC
From: chriswil@southern.co.nz
Message-ID: <4v33ie$su@orm.southern.co.nz>
Source record: 139879

Hi there!

I wish to give my Falcon 16 megs RAM. The best option I can think of is to buy an unpopulated SIMM adaptor and buy the SIMM here in New Zealand. I can get a 16 meg 72-pin SIMM (60ns) for about US$100, or the 60ns EDO variety for about $10 more. Can anyone supply me info on where/how much I can get an unpopulated adaptor from/for? Or maybe give me email addresses of dealers that stock said item.

Thanks in advance...

Chris W.

I agree totally with Tony's point above. I agree with discussion on
the way the 'net is progressing, its this that shapes it. But I
really feel that this sort of discussion is a bit pointless.

IMO its only people with a real problem that start asking for usenet
groups, and web pages to be removed. Heck looking thorugh the 15000
or newsgroups in my NG list, makes me think that bar a couple of
hundred the rest are junk. But others have different opinions, and
they should be respected for that.

Vote with your fingers not your voice, if you don't want it don't
subscribe to/use it, if there are enough people think that way then
it will soon a)dissapear b)not take up any bandwidth

For one we've probably created more bandwidth in this discussion, than
the newsgroup will create anyway.

ATb.

I have used Spectre GCR 3 with my TT030 without any problems, no special
patches or anything were required.

I have heard that there can be some problems with HD disc drives though.

No good to me! I don't have a Mac (I have a Falcon). Don't have a CDrom and
don't use a ram disk (that's what a HD is for!!).

I'm after long file names on old fashioned floppies and hard drives :(

>2. I completed MagiC 5 UK last week. It is the version 5.02 that has
> a couple of bug fixes, compared to 5.00. There is also a french
> version 5.02.

Brilliant!! Now, where and when can I get hold of a copy??

Forgive my cynicism but I got really pissed off with System Solutions lame
excuses about the release of Magic4. I waited for over a YEAR for that
product, only to find about 3 months after I bought it, it's out of date and
there is Magic5!!

Don't get me wrong! I think Magic is great and use it all the time now! It's
just the age old Atari complaint of distribution!!!!

I'm sure a hell of a lot of UK user's would like to know WHEN we are goingto
get Magic5! And also what sort of upgrade fee we're to be charged!!

I would really appreciate it if people here would ask me first. You must
understand that I've put a lot of work into the list and having people
re-writing it doesn't make me too happy.
If you bothered asking me first you'd find out that I've already made a web
page with links to all the FTP sites on the list! It's available at the URL
below. Just go to the Atari ST section and you'll find it.
I'm trying to keep it up to date along with the usual FTP site list.

2713. Problems with games on STe/TOS 2.06

Newsgroup: comp.sys.atari.st
Date: 1996-08-17 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <321597005d3346@sn.no>
Source record: 139886

I downloaded a few games recently and tried them out, but a couple wouldn't work. I'm suspecting that it might be because I have an STe and/or because I have TOS 2.06.
Anyway, has anyone else got the following games working with the same setup?:

-Ozone
-Pacmen
-Hero

By the way, I'm using a Multisync monitor, so I can use all 3 resolutions. I haven't tried booting them in mid-res though... maybe I should? (I thought all games would boot in low-res).

Any suggestions for any cool PD/shareware/freeware games which work on my setup?

No.

Theoretically, it might be possible if you can multitask (ie running
it in a window) but without examining the Nos internals it is
impossible to say.

The up and coming next version of STiK/Cab supports mailto: so it is
possible from that aspect.

>Can you?
>Dan

Sure. There are several ways to modify an ST/STe... the following files
will show you how:
-rsve
-38000bps
-turbors

You also need a few programs to install in the AUTO folder- these are found
within a file called "Hsmoda06".
I've built the "RSVE" circuit myself, but haven't tried it with a 28800
modem yet. It's a bit complicated to build if you're not really into
electronics as a circuit board has to be built and an IC has to be
pre-programmed.
The "38000 bps" circuit should be really simple as it just involves one
chip or something like that. I've heard that it works well too from others
in this newsgroup.

If you can't find any of these files yourself I can upload them to an FTP
site....

> a valid question,
> If people are apposed to the ATARI binaries group, then why don't
> they simply not subscribe to it?,
> Surely this is less time consuming than moaning,

I'm not sure that people *are* Opposed to a binaries group for Atari:
indeed, ever since this matter was first raised, I have kept on plugging
along with the concept of resurrecting the (it would seem) prematurely
rmgrouped moderated group, that died for one of two reasons (1) no one
was submitting anything, so the moderator decided that the group was no
longer needed, or (2) the moderator was a lazy git who arbitrarily chose
to ignore everyone's contributions. Having the group in the
comp.binaries.* hierarchy would gain far better propagation than trying
to create a new group in the alt.binaries.* one.

The reason why there is opposition to the concept of adding *any* new
binaries group is nothing to do with whether or not an end user chooses to
subscribe or not: what end users do matters not one whit to the fact that
the group would have to be propagated around the globe to all the servers
that host news (just in case an end user that *did* want to subscribe was
hosted upon that server); Brian Reid seems to have stopped producing these
statistics, but about a year ago his figures suggested that there were
380,000 servers around the world. For *any* group to be truly viable, it
helps if its traffic gets to every single one of these (some, of course,
are too small, or limited in bandwidth, and it is these that choose not
to take binaries hierarchies).

Rest assured that folks have nothing against Atari users as a breed: it's
the principle of adding additional binaries groups that is the sticking
point.

> There are a lot of binaries groups I don't like, in fact the names
> of some of them make me sick, so I simply don't subscribe to them,
> it's a great plan and works really well,

The argument that "group x.y.z exists, so why cannot a.b.c" will never
hold water, I'm afraid. In fact, it's one of the best ways to ensure
that your proposal is treated with derision.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi all..!

I was wondering if there was a prg that will play .wavs or samples when I boot up my STe?

Like Windows does!
Ya know.. the sexy woman voice that says.. "Initiating startup sequence"
I heard SuberBOOT 8.1 will do this.. but I use Xboot and would not wanna change boot managers just to perform this function! But if this is the only way.. I might have to!

Thanks
Johnny

FWIH, DD is automatic, rather than the company requesting payment, it
is set up so that payment is automatically transfered to them unless
you cancell it. As soon as I heared that they were down I rang the
bank to cancel my DD, later I got a request for payment by Future
Publishing for cancelling *THEIR* DD, it turned out that my AW sub was
on the credit card so they just cancelled the one that sounded most
like it! :)

Apologies for answering my own posting. Apparently it was all my own fault.
I was supposed to cancel the standing order. The 12 GBP has been credited
to my account now, so I guess I'm ok.

2726. >>>> Is SLM804 for under $100 a good deal???

Newsgroup: comp.sys.atari.st
Date: 1996-08-17 00:00:00 UTC
From: graphic@delphi.com
Message-ID: <hNLwZ0s.graphic@delphi.com>
Source record: 139899

I have been offered an SLM804 laser printer for under $ 100 from a guy
who bought the remaining stock from an Atari dealer who went belly up
(who'd have thought...).
Are print engine drums and toner cartridges likely to remain available?
What are the streetprices of these items?
Where are print drivers available?
Any help would be greatly appreciated.

2727. IDE harddisk (was Re: 1040 STfm and HD?)

Newsgroup: comp.sys.atari.st
Date: 1996-08-17 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <321597045d7087@sn.no>
Source record: 139900

On Fri 16-08-96 07:59, K. Ellis (kellis@primenet.com) wrote:

>HI, Apparently a German company sell an adaptor for the cardtridge.
>It convert any IDE device for the Atari. It's already on the market.
>Need more information about that. If someone knows what I am talking
>about, please, write here. Several atari users would be happy to hear.
>Bye.

Okay... I've written this before, so I'll just repost the following:

- - - - - - - - - - - - - - insert text - - - - - - - - - - - - - - - -
There's been a lot of talk about installing an IDE type harddisk on
the ST, a lot of going back and forth- some people say it's possible,
others have said that there's no such thing, so here's what I've
picked up...

Several companies (most notably in Germany) have advertised about
having IDE interfaces that allow you to use a PC type harddisk instead
of the more usual SCSI ones with a host-adaptor which most Atari users
with harddisks are using.

They would also allow for 2.5" harddisk units which could be installed
inside the ST itself taking it's power from the ST itself. This
would further reduce the price because you wouldn't need to buy the
power supply and the external case.

So what's available out there?
Well, I was hoping to get one installed in my STe, but have had no
such luck. The STe as many might know has a different styled CPU
(Motorola 68000 in case someone wasn't sure ;-)) than the usual ST.
The CPU is the same, but is square shaped (PLCC) while the older ST
type CPU is of a rectangular shape (DIL).
One should think that the only difference was only the mechanical
aspect then, but I'm not really sure...

A company called 'Gellermann & Fellmuth' advertised two boards that
supported IDE hard disks:

the 'Ideal 2.06' for DM 89,- and
the 'Ideal RTC' for DM 149,-

Both boards would support IDE hard disks as well as CD-ROM units of
the ATAPI standard. They would both come with 'HDdriver' and CD-ROM
software, and both of them would allow for TOS 2.06 upgrades using
sockets on these circuit boards.
The 'Ideal RTC' had in addition a battery backed realtime clock (which
amazingly enough the ST is lacking).

I found this ad. in the German magazine "ST computer" (April 1995) and immediately wrote them a letter. After several weeks of no reply I tried again, and then a third time. I even got an email address from a helpful German soul on the net to one of the company owners. I've never received any replies.
I even gave the fax number to someone else on the net who tried to contact them that way, but they never replied him either.

I have no idea why... maybe they're not interested in doing business, maybe the company has closed down...

I've also been told by a friendly person on the net that he has actually seen this interface installed in an STE as there apparently was a special STE version available at some time. He wasn't able to get in touch with the company either.

Anyway, the address (in case someone wants to try);

Gellermann & Fellmuth GbR
Frankenbergstrasse 38
D-12589 Berlin
Germany

Tel: [+49] 30-6480 479 (within Germany: 030-6480 479)
Fax: [+49] 30-6481 271 (within Germany: 030-6481 271)

Now the second company that I've seen advertise IDE interfaces for the ST is the rather famous Hard & Soft which has been selling all sorts of Atari add-ons for a long time.
I wrote them a letter and got their catalogue which among many interesting things shows an IDE interface which they call the 'AT Bus TOS card 2.06'. As you probably understand from the name, this too is an interface that allows IDE harddisks to be connected as well as a TOS 2.06 upgrade.

In my catalogue (from April/1995) the price is shown as:

'AT Bus TOS card 2.06' (without TOS 2.06 ROMs) DM 99,-
'AT Bus TOS card 2.06' (with TOS 2.06 ROMs) DM 179,-
(German TOS I presume)

The interface comes with SCSI tools 4.xx Junior software.
It is also noted that the following items are available at prices given upon asking:

- Adapter for 2.5" drives (a cable adpater I presume)
- Adaption kit for Mega ST
- SCSI tools (full version) + harddisk cable
- Adapter kit for STE

Well, a very helpful dealer here in Norway contacted them for me and was told that they didn't sell an STE version after all!
(makes you wonder why they advertise something they're not selling), but the ST version should apparently be available.

The address to Hard & Soft is:

Hard & Soft computerzubehoer GmbH
Obere Muensterstrasse 33-35
D-44575 Castrop-Rauxel
Germany

Tel: [+49] 2305-18014 (within Germany: 02305-18014) Mon-Fri:9:30-13/14-17:15
Fax: [+49] 2305-32463 (within Germany: 02305-32463)

The final company where I've had some hard proof of availability is
the publisher of (among others) a German computer magazine
called: C't.
They've had several do-it-yourself (DIY) articles through the years
for different computers, and one of those articles is about how you
can make and install an IDE interface in an Atari ST.

A blank PCB and a pre-programmed GAL chip can be bought from the
publisher as well. The rest of the parts are more or less common
parts, though I found the 'wire wrap' type sockets a bit hard (and
expensive) to get hold of.

The interface functions in the same way as the above mentioned do and
also (like the other ones) doubles as a TOS 2.06 expansion board. This
version of TOS is actually needed if you want to be able to boot from
the harddisk (most of us do want to boot from the harddisk when we get
one I guess), but if TOS 2.06 isn't used you can boot from a diskette.
TOS 2.06 can always be added later I guess, but I'd highly recommend
it anyway since it changes your machine completely and you'll never
want to go back to any older TOS versions after having tried it!

The article about it (in German of course) can be bought for... (I think
I paid DM 4,- but don't quote me on this) and was featured in
issue 9/1993 of C't.
The article was titled "IDE adapter fur Atari-ST" (page 170-173).

IDE adapter PCB (approx. 48x85mm) DM 26,-
IDE adapter GAL chip (pre-programmed) DM 19,-

As for software, AHDI 5 supports IDE and can be downloaded for free
from just about any FTP site.

The address to the publisher of C't:

EMedia GmbH
Postfach 61 01 06
D-30601 Hannover
Deutschland

Tel: [+49] 511-53 72 95 (09-12:30)
fax: [+49] 511- 53 52 147

That's all the info I have on the matter, but I'd like to know more.
Most of all I'd like to know if there is an IDE harddisk interface
that works for the STE and where it can be bought. I'd also like to

recieve feedback on availability/use in general.
And if anyone can get in touch with Gellermann & Fellmuth and hear if
they sell those interfaces for the STE I'd be more than interested!

The above mentioned interfaces should all work fine with the usual
older ST machines (ST/STF/STM/STFM/Mega) but not STE/MegaSTE as far as
I know. If someone has succeeded in getting them to work with the
latter two machines I'd really like to hear about it.

2728. NOS and Compuserve

Newsgroup: comp.sys.atari.st
Date: 1996-08-17 00:00:00 UTC
From: bkozlowski@nordnet.fr
Message-ID: <840409128_OASIS_@nordnet.fr>
Source record: 139901

In article <17772_LCollins@mettav.demon.co.uk>
LCollins@mettav.demon.co.uk (Liam Collins) said:-

> Does anyone know why I can only seem to get NOS half working with
>Compuserve. I can get news and send e-mail but I can't get CIS to send me
>my e-mail even though I know there's some waiting for me, [...]

Because it's impossible to recieve Compuserve mail with NOS, CIS not
having POP3 servers. They say they will have soon POP3 mail, when they
will install the new architecture (newmail). Server mail.compuserve.com is
only a smtp server, to send emails.

>also whenever I try to post to a newsgroup I get this:
>
> 480 Transfer permission denied

I had this one too, before I upgraded the NOS version to NOS_POP3 wich
not only have POP3 support (working fine, I use it with another provider)
but uses a nntp posting method (POST) compatible with most newsservers.
Simple NOS 0.42 uses another method (IHAVE <msgIDs>) more designed for
server to server links, AFAIK only usable on demon newsservers, and
refused by any other one I tested (and I tested many, due to the high
level of lost articles on news.compuserve.com).

You can find NOS_POP3 there:
<URL:ftp://ftp.toad.net/pub/umich/Network/Ka9q/Nos/nos_pop3.zip>

After unzipping, you get a NOS.TTP usable exactly like the old one,
same commands, same setup files, etc... just have a set of "pop something"
commands more. And now you have no more problems with Compuserve! And I
think that the POST method works also on demon... but I cant test it as
pubnews is always out of order (is it? I have not telneted his 119 port
since a month or two...).

Hope it helps! Bye!

wrote:

>I downloaded a few games recently and tried them out, but a couple wouldn't
>work. I'm suspecting that it might be because I have an STe and/or because
>I have TOS 2.06.

TOS 206 would be the problem, having an STe should NOT be any
problem,

>Anyway, has anyone else got the following games working with the same
>setup?:

>-Ozone
This is an older STOS game that uses a lot of original STOS commands
and therefore would be difficult to fix, but try STOSFIX 3 available
from any pdl and presumable most ftp sites, if that fails then no
chance?, I take it you do not have switchable TOS?

>-Pacmen
Hehehehe you would have to be more specific, have you any idea how
many pacman games there are :)

>-Hero

Presuming its the recent H.E.R.O. and not the older RPG game then
yes, this will work if fixed with STOSFIX, Definatly :)

>By the way, I'm using a Multisync monitor, so I can use all 3 resolutions.
>I haven't tried booting them in mid-res though... maybe I should? (I
>thought all games would boot in low-res).

The above games will boot in low or medium, they will revert to
whatever resolution is needed, unlike crappy GEM games, these can
change res' willy nilly :)

>Any suggestions for any cool PD/shareware/freeware games which work on my
>setup?
Check out my page, selct STOSSER Software to view all my titles, they
will need STOSFIX, you can even download games from there :)
My suggestion would be to get a copy of STOSFIX if you are using tos
206, you will need it :)

Coming soon: "Heartland" Fast, 8 way smooth scrolling platformer,
featuring the largest play area seen on any ATARI game, great gfx,
also feature enhanced sound if run on a STe, will work on all tos
versions, hd compatable.....Freeware!

End of advert :)))

Cheers.............!ynoT

2732. M_PLAYER v1.40 Beta

Newsgroup: comp.sys.atari.st
Date: 1996-08-17 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <960817Z135652.368dave@mbha.demon.co.uk>
Source record: 139905

Greetings y'all,

I have uploaded m_player version 1.40 (beta) to:

sunsite.cnam.fr (/pub/Atari/incoming/mplyr140.zip)
ftp.uni-erlangen.de (/pub/atari/incoming/mplyr140.zip)
42BBS (01256 895106) - UK
Chameleon BBS (01454 881095) - UK
alt.binaries.atari

New features include:

* more formats supported
* now works with CDROM/Extendos
* Autochanges resolution on Falcon

Copies also available by email if you cannot find them - let me know...

Enjoy! But remember to register to get the colour version...

A drum will run you about $200, toner $50 (supply) to $70 (initial). Brad at Best Electronics in San Jose should have quite a few in stock and National Computer Service in Minnesota supports the TEC line (from which the SLM 804 was made). They said they had a sure supply for about another year or so. Last I heard, Brad was selling new SLM 605 printers for $200 or $300. That would be a better bet, especially since the toner is available at Office Depot for $30. The 605 is based on the Epson EPL5000 or 6000, I believe.

Hello,
I'm trying to sync Cubase (Atari ST) to a 25 fps SMPTE striped multitrack tape. I then
will have to use the Human Sync feature since there's already some live music on the tape.

Could anyone post the procedure (settings I should use in the SYNC window ..) ?
I'm using the Midiman Syncman Plus sync box.

Any advice would be greatly appreciated, I haven't been able to get Cubase to recognize or maybe even get the incoming SMPTE.

2740. TRS-80 emulator Update

Newsgroup: comp.sys.atari.st
Date: 1996-08-18 00:00:00 UTC
From: Sander Berents <s.j.berents@fys.ruu.nl>
Message-ID: <32172631.474C@fys.ruu.nl>
Source record: 139763

VERSION 0.6 OF TRS-80 EMULATOR FOR ATARI COMPUTERS AVAILABLE

Now you can download the TRS-80 model III emulator version 0.6. The package includes basic programs, machine language programs and NEWDOS/80 on 3 virtual disks. It also has a MagicMac compatibility mode and runs in all monochrome video modes. To download it go to the Atari page of
http://www.pi.net/~volatile/

The package now consists of two .ZIP files. TRS80V06.ZIP contains the minimum configuration. TRS80X06.ZIP contains conversion software and software for exchanging files between the Model III and your Atari. It also contains extra documentation.

Changes:
- Support of all monochrome video modes starting with ST high;
- Support of virtual disks with any number of tracks and sectors per track.
- ROM tape routines rerouted to disk file. This could be used by Tape to Disk copy programs. Note that the current optional CLOAD, CSAVE and SYSTEM rerouting is not changed;
- Snapshot loading/saving added. Memory, registers and options are saved;
- Changed settings on NEWDOS/80 disk. Disk 3 now defined as SS/SD disk for Model 1 disks;
- Startup message;
- NEWDOS/80 info translated to ASCII
- 2nd Connection and 2nd Convert added to the package;
- Manual, BASIC manual and other info included.

Using the included SPEED.BAS the following speed results were obtained (all numbers relative to a 2 Mhz TRS80 model III)

Tested item	ST	STE	Falcon16	TT*	630**
Integer	43	85	83	170	510 %
Floating Point	32	59	60	121	392 %
Memory	45	86	88	182	530 %
Text	170	311	311	530	1766 %
Scrolling	60	131	217	333	714 %

* TT RAM
** Apple Performa 630 running MagicMac 1.2.5
(for these tests the options "disk system" and "speed adapt" were disabled, "video acceleration and clock adapt" were enabled. The real time clock was set to "normal")

Send an email to me if you want to be added to the 2nd Life mailinglist. I will use this list to notify you about new updates, tips and tricks.

Tony,

You do _not_ have to receive the large encoded .PDF files if you want
to subscribe/read STReport. I have been maintaining a weekly mailing list
for three years now, sending out the ASCII version which is considerably
smaller. If you'd like to be added to that list, just let me know.

That emulator, along with MagicPc, are both entirely in German!! I took
German in eighth grade and all I got out of it was "Ich bin Korbball"
or something like that. :]

2744. HUGE SALE: MSTE4,NOVA,etc!

Newsgroup: comp.sys.atari.st
Date: 1996-08-18 00:00:00 UTC
From: xzyiysx@aol.com
Message-ID: <4v6qar$fbe@newsbf02.news.aol.com>
Source record: 139767

FOR SALE:

MegaSTE - 4MB RAM, 1.44MB floppy drive, co-processor $335.00
NOVA VME 16M graphics card for MSTE / TT $215.00
Quantum 525MB internal SCSII Hard Drive $125.00
NEC-3D Multisync Monitor $200.00
BOCA 14.4Kbps external FAX/Modem $ 65.00
1.44MB external floppy drive in SF314 case $ 45.00

Total: $985.00

S P E C I A L P A C K A G E D E A L P R I C E: $775.00

I also have the switchbox for enabling the NEC-3D to run in all 3 ST resolutions plus the NOVA rez's with just the flip of a switch.

I've put a great deal of thought into these prices. I believe them to be very competitive, therefore they are FIRM. Please note, however, that shipping in the Continental U.S. is INCLUDED in the above prices. Also, if a package deal was to be made of only several of the above items, an added discount may then be considered. :) COD costs are to be covered by the buyer (I would prefer a Money Order or personal check in advance). Finally, I can't really let any of the above go separately until the MSTE has been sold itself.

Other Stuff FOR SALE:

SC1224 color monitor $ 65.00
SM124 mono monitor $ 50.00
Supra 14.4Kbps external FAX/Modem $ 70.00
Spectre GCR w/ 128K ROMs $ 80.00
Migraph Hand Scanner w/Tray and OCR Software $100.00
mystery 1MB 520ST (DOESN'T RUN): $ 50.00???
has TOS 1.4, AT Speed board, SS drive, extra drive w/o case

I have this device and it's surplus to requirement! So if anyone wants
it I'll be happy to swap or sell it. I've never used it so I have no
idea of how well it works and I don't have the TOS 2.06 ROMS.

I'm interested in obtaining an overscan device or ET4000 adaptor that
actually works, Magic, NVDI or Speedo GDOS, or whatever's going.

Best offer by next weekend gets it.

Hi Hallvard, I'll mail you soon.

Be Well, Gaz.

> Mpeg Fever de-codes MPGs ?

Hi Paz,

As you appear to have a Falcon I would recommend M_PLAYER by
Guillaume Tello.

This is a new shareware TT and Falcon specific program which plays AVI,
MOV (Quicktime), FLI and FLC files.

You have to register to get colour playbacks - which is just as fast as
the greyscale unregistered version. Well worth doing.

Guillaume is working very hard on it... version 1.40 is about to come
out (if not already) which includes compatability with Extendos so you
can play files directly from a CD.

(For some reason you can't use Freedom to select the files to play.. but
you can have it installed and call the files by drag and drop or by
double clicking on them after installing M_PLAYER as the application)

The big 'selling' point is that if the audio is one of the supported
types it can play it with sound - decimating the video to keep in synch.

For me it has turned AVI/MOV files from a curiosity to enjoyable media.

Using the "Font Manager" and starting from scratch (no fonts!), add
the following to the font list......

the folder "FONTS"
then the fonts that you want (whether they are in folders are not)
"font A"
"font B"
etc.....
(So the manager will list "FONTS, Font A, Font B, etc."

At the level most of us do DTP, it is not important to worry about
"font suitcases". Just find a template and print out the varous fonts so
that you can look at them when you need to make a choice for a font to use.

Remember that CSTriumvirate replaces Helvetica. and CSTimes replaces
Times. As far as I know, you have to remove the old Helvetica and Times
as they interfer with the CSTriumvirate and CSTimes.

Be sure that you save the "paths" for next time. Also, Pagestream is
usually conservative when it comes to dealing with memory. However,
print files are huge anyway! Be sure that you have enough memory (bare
bones, few ACC's, etc.). Don't forget to turn Greeking "on" to speed up
screen redraws!

I have used Pagestream for several years and it works great with
Linotronic machines, and most printers (if the drivers are written
correctly)! Good Luck..............

I have a bunch of spare ST items that I have no immediate use for
(and not much space).

- Prices INCLUDE shipping EXCEPT for the monitor and magazines -

Atari SM124 Monochrome Monitor - the classic atari monitor ... $35 *
with no modifications (i haven't tinkered with it, amazingly)
good shape, great picture. Tiny flaked paint by the Atari badge.

Conner 3.5"/130meg hard disk no problems whatsoever. Bare..... $25

ICD HD Adapter board. Includes clock, and is an early ICD ... $20
SCSI hard disk adapter, no docs. Works with my old Rodime
drive, but not my Quantum one?! I'm no technowiz, hence price!

Mastersound Digitizing cart, includes software/manual ... $15
Plugs into cart port and grabs sound samples etc. Groovy!

MIDWINTER, Classic ST/STe game in box w/all docs, etc. $10
AMBERSTAR, from Thalion, ST/STe RPG game, boxed w/docs etc. .. $10

2 ATARI (MICE), the original atari brick mouse, unused! .... $ 5ea.

- Also -

ST FORMAT/Various magazines, a large box FULL of atari magazines
(mostly British) dating back to 1990, include coverdisks where
applicable (well, a lot of them anyway) if you want the full
rundown I could probably force myself to take inventory. Probably
about 50 or more magazines... does anyone want to cover shipping to
take these? I'm planning on recycling them.

- Andy (mccallum@inwave.com)

I've seen the demo version working on a 66mhz pc with only 8 mb RAM.
On that machine it was pretty fast indeed. On behalf a friend of mine,
I've ordered the full version. As soon as he can test it I will post
the result to the group.

BTW: I can read German enough to understand the manual but I can't
speak or write this language.

I think you are thinking of HyperLINK. That was a great program from JMG Software International in Canada. They stopped supporting it jsut as it was getting good. I'm guessing two guys wrote it, one doing the main program and the other doing the documentation and example modules and the second guy was flogging the source code for a while. I really wished someone had picked it up (or that I'd had the skills to do it myself). I remember seeing a post about a year ago from that guy saying maybe the code could be used in a web browser (this was before CAB was finished).

Anyway, JMG still exists and has a web page (they sell PC hardware and stuff now). Do a web search and I'm sure you'll pick up an e-mail address (I'd do it for you, but I'm telnetted in through a crazy patch of computers right now and things are just too sluggish).

Thanks for the above hints. I think my problem is this: the mouse pointer vanishes because Oasis has frozen up solid, and I can go no further without resetting, so I don't think the tidying up referred to will help me, will it?

Who can I write to who has the ear of the writers? (Or even the noses?)

I wrote to Phil Yeaden and he suggested I waited until the next version came out when maybe the problem might have been fixed. I did and it wasn't.

I just want to get it working. I'm still getting bad packet, and am completely unable to get news.

Good news, however - I can send Email!

Thanks again.

Simon

Hello all,

I'm looking for the actuals e-mail adress of Dieter Fiebelkorn and Ulrich Robgoderer.

I registered for their wonderful software (Gemview and Kandinsky) directly to their snail adress and... i'm hardly waiting the shipment :)

Maybe they are on holidays, or something? Anyone registered unsuccessfully?
Bye bye.

-- That which man is always trying to kill, but which ends in killing him.

Please don't e-mail me, as I would not be able to answer you at the moment. Soon, maybe...

Highsoft Basic is to plain for me.
You can do more with GFA Basic. I prefer the IF's and other things.
But I do also use STOS.

: searching for the source to v1.35 for years, but they havn't tried the 'net.
: So here I am. Here are all the messages they posted to the CitaNet: (in
: random order... :P)

I got a message from someone who said that they did some upgrades to it
and so on, but can't find it.

Like you, I'm doing a search for those who were writing BBS programs. I do
know that Matt Singer wrote Forem ST, and he gave the source to someone
else when he got out of programming it. I've tried looking for these
people, but I have no place to start looking, even though I've done
searches for Forem ST and so on. It all keeps coming back to Singer. I
emailed him awhile ago and got a response, which is how I found he gave
it to someone else, so I'll be emailing him soon. There's also the authors
of QBBS and TurboBBS for the ST, of whom I've not been able to locate.
Think anyone can help?

In the comp.sys.atari.programmer group, we were talking about the Mark
Williams C package, and the company that made it, that's since gone out of
business in early 1995. I'm looking for the owner of the company, Robert
Swartz, of whom I've not been able to find. And yes, I've done web and
search engine searches galore, so any new info would definitely help. I
did get in contact with, Joe Dennison, the last technical contact person
before the company went gone.

phil@yeadontt.demon.co.uk (Phil Yeadon) said:-

> This is not de-fragging of the drive, just of files be renaming them
>and then copying them to a new file. This is done because GEMDOS gets upset
>if a file is split into more than (we believe) 10 pieces on the drive.

In my experience, I think GEMDOS gets upset in 3 cases:

- if a file ends on the last 2 clusters of a drive gemdos cannot
reread that file.
- if a file has "backward references" in the FAT, the end of the file
being before the start (in terms of clusters position) gemdos cannot
reread that file. This is only possible with a disc comming from a PC, as
GEMDOS will never write "backward FAT references".
- because of this, if the last cluster of a file is near disc end, and
you append to it, GEMDOS will only fill the end of the disc, even if there
is 40 Mb free clusters *before* the written file... you end with a crash
and a corrupted file (inconsistant file size).

In the 2 first cases, you have no lost data, as you can defrag the
disc (important: with CHKDSK3 from Atari corp) then read, or directly copy
the file anywhere else with KOBOLD. If you try with GEMDOS, you have an
error (cannot read file) or not, but a totally corrupted file... sometimes
the file seem to have directories in it, or anything else that were in the
disc buffers before... parts of the last written files, etc...

Against the first case, I tried to mark the last clusters as bad in
the FAT, but for the last cluster GEMDOS doesn't seem to read this info
before writing (!!!) even if a file is there, a second little file can be
written there too... over the first. It even tries to write *after* end of
disc one cluster more (!!!!).

AFAIK, nothing related to the number of pieces a file is split, I
remember a file being splited in 27 parts with no problem (yes, it was a
Oasis message-base file!).

bye! (I wonder if the multilines "References:" header is recognised by
Oasis 2 for correct threading?)

If that doesn't make it a lot cheaper than commercial ISPs, then why
do people use a crippled system?

>>The technical point is that, for IBM software, distribution via Usenet

>the alt.sex.binaries groups.

That's irrelevant; posting a 1-K message instead of emailing it to the
only person who's interested uses a trivial amount of bandwidth,
almost all of which is wasted. The key issue is how many people at a
typical site want the group. The larger the number, the more likely
Usenet is the correct distribution mechanism. The smaller that
number, the less likely.

>be "the hard one".
>
Just having a quick look in my Fonts dir.....
The \pgstream\fonts\ dir should contain at root level the following:
fonteqiv.v2
fontlist.v2 [created by PGS2 I think...]
fontss.v2
plugin.typ

Install plugin.typ as a font, and make sure fonteqiv.v2 and fontss.v2
have the path correctly set in Set/Save Paths. My installation then has
all the fonts in folders within this path. The files above are an
essential constituent of the Compugraphic fonts - without them Times and
Triumvirate are completely f***ed!

BTW after installation the prog needs to be restarted from scratch so
that they install properly.

Good luck!

Andrew

From: jdaddin@dfw.dfw.net
Message-ID: <4v6adg$jcg@fnord.dfw.net>
Source record: 139832

I just got the beta version of GlueSTiK. Has anyone got it installed and working? I tried it on mine and it says something like' cannot determine size of CFG file'. I'm not sure what I'm not doing.

Also, when extracting .tgz files, is there an option I can set so that gzip will create the subdirectories? When I try to extract things this way it just says it can't locate the directory and skips the file. I didn't see an -recursive option in the help menu.

Thanks!

2782. Report on new ST magazine (IC)

Newsgroup: comp.sys.atari.st
Date: 1996-08-18 00:00:00 UTC
From: Matthew Townsend <mabb23@dial.pipex.com>
Message-ID: <32177F15.251B@dial.pipex.com>
Source record: 139833

Aplogies for this long e-mail.
Two weeks ago today I posted a message on usenet to find out if there would be interest in a new ST magazine and what format it should take. This is the first report outlining final details about the magazine. This is representative of the open approach I wish to take with the company (ie keeping readers informed at every stage). Feedback would be appreciated.

Profile - Matthew Townsend (Publisher, founder and editor)
Despite having used computers since the early days of the spectrum, and then moving to the Atari approximately 8-10 years ago, I think it would be unfair to call me an anorak or enthusiast. I'm more interested in computers as real machines will real purposes. The ST is capable of more than ever before, but without any support from big businesses I believe the ST industry needs to take a new, community based approach and the magazine will hopefully be an integral part of that community, co-operating with all other ST-related companies.
I have over 2 years of editorial experience working on a major publication in Wales. I've lived in Cardiff for ten years.

The magazine's format
At risk of losing potential customers I've felt it important that the magazine takes an unusual format, so that it compliments other magazines available instead of simply splitting readerships between us. Therefore, I have decided that it will be available foprtnightly. Atari Computing magazine looks set to be available every other month, and as we are seeking to co-operate with this publication, we will go to press three times every two months, ie every fortnight except the one when an issue of Atari Computing is released.
The name of our publication will be IC magazine (Independent Computing), which is appropriate because of the way the Atari users are now only supported by a network of small businesses and free from the major multinational corporations.

Production and size
Due to high costs of regular distribution and lack of financial backing, the magazine will intially be little more than a newsletter - only 3
and a half A4 pages of editorial and self mailing.
The magazine will black and white and produced entirely on an Atari
ST running Calamus 1.09n, although the software will probably be upgraded soon to SL.

Content
Due to its frequency, IC magazine will be largely news-based, although many ideas have been recieved for possible features and regular columns. These include: falcon coverage, s/ware and h/ware reviews, adverts,
interviews, general articles, programming, games, beginners, MuntiTOS, Mint,
help with apllications such as STik and Mintnet and comms/internet articles.

Costings and price
Whilst we have tried to keep prices down, and as we succeed in more
cost-cutting we shall push the extra funds back into improving the magazine,
the first three issues will be run to the following costs:
price of publication 50p
production costs 20p
distribution costs 20p
this leaves 10p to be puched back into the magazine
I-C magazine will be available only as a 3 issue subsription for ï¿½1.50

Circulation
We are primarily concerned with getting the magazine up and running
and improving the editorial content and production routines. The first three
issues will therefore have a low average distribution of just 15 people.
We should then be ready for a distribution drive to push the magazine's circulation to 100 people per issue, then in the next three months
to 500 people. In a years time we hopw to be reaching over 200 thousand readers every issue.

Others connected with the magazine
The success of this magazine will rely on others offering help and
co-operation deals being struck with other companies. These are people who
we have been in contact with to date:

Tony Greenwood of STOSSER software and founder of STOSSER diskmag - who has

contibributed a number of helpful ideas and has offered to do work to help
the project.

Rod McDonald of ST Informer - who has expressed a large interest in working
together to both our benefits.

Mike of Atari computing - who last said he needed to speak to his financial
backers before commiting himself to agreeing to co-operate on anything with
us.

Various other individuals to whom I am eternally gratefull.

Final Note
A finalised launch date will be sent out soon, a long with a
subscription order form. After this I will very rarely e-mail you again,
because I do not want to keep clogging up your mail box and communications
most will be done through IC magazine itself. In the meantime please keep in
touch with any suggestions and offers of help.

In 1986, I was making roughly $10/hr. Average bench-level electronics
repair technician.

You can't compare a tech to a doctor. You need to compare an engineer
to a doctor. I would say that a nurse would compare to techie, but
that might upset some people :-)

In 1996, I am a software technician, and am making $40,000. Slightly
underpaid. I figure a hardware techie would fall into the same base
pay range.

Make sure the fonts directory manager points to the directory holding
plugin.typ as a separate entry from the other font folders.

]
] I'm up against a similar problem. Please post any fruitful replies you
] get. I also have a problem importing graphics. They import on a separate
] screen which doesn't seem to relate to the "real" document. I just picked
] up Pagestream as part of a package; I normally use Calamus. I find PGS
] baffling, in ways I never encountered with Calamus, which is supposed to
] be "the hard one".

I think this problem is due to importing the graphic to the picture window
which is a clippable screen. You can also import as an object, which is the
one I use most.

Cross-posted to:
news.groups,comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

(Maffia wants 8-bit sound and graphics files allowed in proposed
comp.sys.atari.binaries. Tietjens says maybe ok or something.)
I'm opposed to sound files and picture files, but really don't
care. I could see the binaries group get a bunch of tiny
picture and sound files. Hmmmm... I go to the midi binaries
group sometimes, it is a mish-mash of requests and binaries.
Sorta a prototype for the proposed atari. binaries. Except
Tietjens and Hofmann are looking for more 'discipline'
. Maffia wants to trade these rather rare formats of
sound and picture files. He probably has more of them
than anyone else, he's a rare bird that likes that type
of stuff. A simple post in csa8 might find out for him
if there's anybody else that likes the same type of
stuff. I like the original idea to exclude picture
and sound binaries, just have program files.

>really want to wait a year for Magic5 to appear in the UK :(

This may or may not help you, but you can currently have long filenames with
MiNT. You just need the MinixFS driver. The only catch is you must
erase a whole partition to let it use the long filenames. And it is
easy to install - if you have heard of problems people have with MiNTOS and
things, don't worry - this is just MiNT, NOT MiNTOS or anything else.
Just two files into the right parts drive C and you should be all set, I think.

The other catch is that MiNT does not work with MagiC. You would have to
decide whether you want to give up MagiC just for long filenames.

2788. "Hypercard" like program ("Hyperstack"?) ?

Newsgroup: comp.sys.atari.st
Date: 1996-08-18 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GHSWAIUQUp@tos.ak.planet.gen.nz>
Source record: 139839

I once saw a program which I believe was called Hyper Stack. It was similar in many ways to the Macintosh Hypercard program.

All I can clearly remember was that one of the example applications that came with it was an animation of a flower appearing out of the ground and growing until large before shrinking once again into the ground.

It was a sort of a database program with very user definable front ends.

If anybody knows what this is or where I can obtain it, please let me know.

Thanks.

m> Organization: Tariland Computer Club, Auckland, New Zealand
m>
m> I recently heard of a program that allows Atari TOS machines to get a
m> "Start" menu, similar to Windows95.
m>
m> What is this program called and where can I obtain it?

This is 'Start Me Up'. Until recently it's on;y been available in German,
but version 1.09 includes an english program and v1.10 has english
documentation. Look for SMU110E.ZIP or see if it's downloadable from Joe
Connor's 'Interactive' WEB site:

http://www.compulink.co.uk/~inactive/welcome.htm

It requires MagiC3 or higher, N.AES or MultiTOS.

I use superboot, and its sample play doesn't work the way I want. So I just place 'play.prg' before it. I got it from Umich, sound/digisnd.arc I think, look for a rather large 300k file...

True enough. Probably much better to use Hallvard's list instead, rather
than mine. His will undoubtedly be more up to date and much better
formatted. As I consider Hallvard the current "keeper" of the ftp list, I
would ask that you use his list rather than mine, since mine was nothing
to write home about anyway, and also probably slightly out of date.

In any case, sorry for the lack of consideration and my presumptuousness.

I used Anthony Jacques' Generic STOS Fixer on OZONE and got it to work on my Falcon! Pretty good game. He should be able to get it to work on TOS 2.06.

I make a mention of the program in my alt.info.everything column in the latest issue of CURRENT NOTES as something essential for any Atarian's toolkit.

Oh, yeah, Tony - I also did a sidebar in my column this month called "Essential Atari Web Sites", and have included your Web page in it. We've also added it to my link page in CURRENT NOTES' WWW pages.

>Given that average income of medical doctors are $150,000/year, is this
>doctor right? How much does an average computer/electronic tech make?
>Thank you for your response.

You must remember that the tech doesn't get all the money, part goes to the business owner to cover overhead (store front, vehicle, gas, utilities, etc.). Your average auto shop gets around $60 per hour, but there's a lot more auto shops and independant mechanics than computer repair shops and the competition drives the prices down.

Of course, I would never pay such an exorbitant rate, but then I can do it myself. I assume their biggest customers are businesses that rely heavily on their computers and don't have enough problems to justify hiring a computer geek at $10-15/hour.

Don't feel bad, I've got a Bachelor's in Mechanical Engineering and make 2/3 of what my buddy does as a Network Administrator with only a Bachelor's in IS. Of course, that's when I'm working, grr. Guess I better go back after that Master's in Computer Science.

From the Holy Book of <4v6adg$jcg@fnord.dfw.net>
as spake by jdaddin@dfw.dfw.net (Jared Addington) :

>I just got the beta version of GlueSTiK. Has anyone got it installed and
>working? I tried it on mine and it says something like' cannot determine
>size of CFG file'. I'm not sure what I'm not doing.

I just checked the source, and that error message does seem to be
misleading. The problem is probably that GlueSTiK can't *find* your
config file. GlueSTiK uses STiK's DEFAULT.CFG file; if you don't have
one already, you can get by with one containing the single line
"ALLOCMEM = 50000". Put it in a subdirectory called STIK_CFG on your
boot drive.

If you already have a DEFAULT.CFG file and GlueSTiK still can't find it,
then it gets tricker. If you're using a STIK_DIR.DAT file to change the
default location of the DEFAULT.CFG file, make sure the full path and
file name is specified. If your MINT.CNF file changes directories with
the 'cd' command during execution, make sure to cd back to your boot
drive before the line that exec's GlueSTiK.

>Also, when extracting .tgz files, is there an option I can set so that
>gzip will create the subdirectories? When I try to extract things this
>way it just says it can't locate the directory and skips the file. I
>didn't see an -recursive option in the help menu.

The problem is more likely tar than gzip. What version of tar are you
using? I remember having that problem too, until I switched to
<URL:http://www.umich.edu/~archive/atari/Mint/Utilities/tar-1112.zoo>.

h > Or better yet, a voice saying "You really turn me on" as the
h > machines has just started.. ;-)

there's a sound file from THE SIMPSONS floating around of
Smithers' start-up screen on his Mac with Mr. Burns saying "Hel-lo
Smith-ers, you are quite good at turn-ing me on". :)

h > Have you tried a program called "Crazy sounds"? It's a
h > commercial program though, but you can get demoes from several
h > sites. I think I found one at cnam in France..
h > (sunsite.cnam.fr /pub/Atari/)

if it's an STe or a Falcon, Atari recently released their System
Audio Manager (SAM) software as freeware (this is what I use with my
Falcon, which came bundled with it) As well as giving a bootup
sound, you can also assign samples to system functions. I've
assigned Homer Simpson going "D'oh!" to the sound made when my
Falcon crashes :) The program can be found on TOAD's BIRD OF PREY
Falcon CD-ROM....

Papyrus 4 sure does, even with getting the pages in the right order.
But as mentioned before, that's not out in English.
You have to ask somebody else if version 3.xx also features this.

I actually contacted Dr.T, with an intention of buying it straight from them, only to hear that they had stopped the support for the program only months earlier. Luckily I found an owner of one who sold his (almost unused) copy (+manuals) to me.

A great program...

I do know very well what a computer technicians make. It's just that some
of the doctors prefer not to face the truth and make up stories about how
much they are underpaid relative to other professions - which I think is
somewhat cruel, considering they are the highest paid profession in U.S.
I also have a bechalors in Engineering, but boy has it been tough finding
a job. My brothers and sisters are all in computer industry, and they all
are doing better than I am. Thank you for your posts.

When I registered Superboot I got sent a disk of pics, sound samples
and all the various utilities mentioned in the documentation as being
usefull to have. When my STe boots it shows an animated picture
(colour cycling) whilst Pink Floyd sing "Welcome to the machine"
before coming down to the password screen.

I believe it still works on the falcon but Stoop gets my vote there.
Not as flashy but still pretty danm good.

Register it,,,,Gordon Moore's such a nice guy.
Mind you I've not seen an update in a while.
Maybe e-mail him first on gordonm1@aol.com

Here is a copy of the first part of a GEM.CNF file I recd in an email with
AES 4.1 some time ago.

It seems pretty self explanatory to me - although there are a few things
I have yet to try out...

-- snip --

```
# gem.cnf
# Last Modified on 4/19/1993 11:11
# ================================================================
# use 'setenv' to set the AES environment variables. Current
# useful environment variables are:
#
# PATH - used to search for resources for apps
# ACCPATH - Accessory search path
# DESKFMT - can be used to install alternate disk
# formatter
# DESKCOPY - used to install alternate disk copy
# application (into Desktop).
# SHPRINT - full path for desktop print utility
# SHSHOW - full path for desktop view file utility
# GEMEXT - filename extenders for GEM applications
# TOSEXT - filename extenders for TOS programs.
# TOSRUN - full path of program to run TOS programs
#
# The following items are variables used by GEM. They can be
# set by: <variablename>=1.
# For example: AE_SREDRAW=1 would make GEM redraw the screen
# when an application is launched.
#
# AE_SREDRAW - redraw the screen when program starts
# (1=on, 0=off)
# AE_TREDRAW - redraw the screen when program exits
# (1=on, 0=off)
# SHELL - full pathspec for default shell. Can
# be used to install alternate desktops
# in a window.
# AE_LANG - the default language for the GEM Desktop
# (0=usa, 1=German, 2=French, 4=Spanish,
# 5=Italian)
```

```
# RUN filespec - will run the program filespec at the
# time the GEM Desktop starts.
```

How much does it cost to get the full working version? If I could
get it translated I would be more than happy to pay for it!! Then
again I could always learn German! :]

2822. more Oasis problems

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: svante.gustafsson@mbox300.swipnet.se
Message-ID: <46678977_000027_OASIS_NEWS@mbox300.swipnet.se>
Source record: 139673

I use Oasis on my 1040 STE but I can't make it run properly.
After I log out the program refuses to return to Oasis. I have
to use the low-memory version because the other one won't log
on at all. There's a lot of junk on the screen when I run Ice,
it's impossible to enter Ice-net from Oasis etc. etc.
Can somebody help me? /Svante

Marcel Veltmaat wrote this to All about Wanted DAT Digital Interface for
Falcon:
MV> I just wondered if anyone has a DAT digital interface for
MV> sale. This interface you can plug in to the DSP-port. Or if
MV> you are using it can you tell me more about it.

Hi Marcel,
I don't have one for sale, but I use mine frequently. It's from SoundPool and
is simply called "S/Pdif interface". It has both optical and coaxial S/Pdif
in/outputs, so you can connect it to any DAT that has digital connections
(except those with AES/EBU).
When recording audio in Cubase Audio, I let the DAT act as an A/D converter and
send the signal optically to the S/Pdif. This means I get as good A/D
convertion as there is in the DAT recorder.
It works perfectly and with extra software, it's even possible to backup all
data on your HD. A 120-minute DAT tape can hold about 1GB. That means it's
rather slow when comparing to a DAT-streamer, but it sure cuts the costs
down...
Here in Sweden, the S/Pdif interface is sold at SKR2125 including sales tax and
the extra software, DataDat, is sold at SKR345.
Don't hesitate to ask me more...

Best regards,

Claes

:
: I'd really appreciate a rundown on the improvements to MagxDesk in this
: version. Can you give us a list?

Compared to Magxdesk that was included with MagiC 4 there are only some
minor bug fixes and a new text file viewer MGVIEW.APP, so you do not
longer need SHOWFILE.TTP.

There are many many many internal improvements concerning the internal
structure of the OS, compared to 4.x, i.e.:
threads
signals
many MiNT funnctions
VFAT
long partitions
Therefore I had not enough time to improve Magxdesk significantly.
Unfortunately MagicAtari, MagicMac and MagicPC all are shipped with
Ease and only very few persons use Magxdesk.

Worked fine with Netscape here; and I just tried Lynx as well at the
pacifier.com account. Its is in French, however. <G>

Seriously, I suspect it may have been a line glitch with Lynx. Are you
having any other problems with CAB? You may need to clean out the cache.

You have several options:

PLAY.TTP (part of the DigiSTuf package) will play either a single file or pick randonly from a list (you rename it to PLAY.PRG and put it in the AUTO folder).

Using the auto-run capabilities of TOS 1.6x and later (actually 1.04 and later IIRC), you could set up LPS123 or WavePlay to play a sample when the desktop first comes up.

You could use a CLI to start an alternate desktop, and play a file from the batch script.

Probably the DigiSTuf route would be best for you; it requires the least work, at any rate, though it is not as versatile as LPS123.

>
>I would appreciate a repost of the instructions for getting FZT up to
>28,800 please...

OK, very quickly, then; this assumes you have a serial port that is
capable of at least 38400 bps:

(1) Install HSmodem (version 07 is the latest) and make sure you don /not/
have the MODEM.CPX installed; or, if you want to use it, use HSmodem's
speed remapping capabilities. Set your port speed to 38400 if you have an
8MHz CPU, or 57600 if you have a faster CPU.

(2) Run FZDT and change the port speed to 19200. Save the config, exit
FizzDizz.

(3) Look in the folder with FZDT and find the config file (FZDTerm.Cfg?)
and load it into a plain text editor. On the first line, ther will be a
row of numbers. Note them carefully, exit the editor.

(4) Repeat step 2 but change the port speed to 300 baud.

(5) Repeat step 3, looking for the number that changed. Change this number
/and only this number/ to "0" (zero) and save the file.

Reboot, making sure that HSmodem is installed, and run FZDT. It will show
a speed of 0 baud. That's good, that's what you want to see. When you
dial and connect, you should see a "CONNECT 28800" (or slower, if your
phone lines aren't absolutely perfect) message.

I have the following bits and bobs available:

Atari 1040STe with 4 Mb memory & TOS 2.06
The TOS is switchable, with a hardware switch fitted to the side of
the machine.
The joystick & mouse ports have been repositioned on the back of the
case for convenience.

PRICE 150 UKP.

LINK II SCSI connector system
to connect your ST with a scsi device.

PRICE 35 UKP.

Forget-me-clock cartridge port clock

PRICE 7 UKP.

Contact me to discuss postage. If you buy all three, we'll call it 190 UKP and
I'll pay the postage within the UK!

Forget it ;)

I received Gemview today (thanks Dieter). BTW, i'd like to use an older version as an accessory (v2.20). How to register it? There is no menu item or file to enter the registration details. Any ideas?

Unfortunately, my postal order for Ulrich Robgoderer (kandinsky) came back with an inking-pad 'nicht abgeholt' (what that means?).

Does someone has the correct e-mail and snail adress of Ulrich?

Bye bye.

2836. Update to Desktips

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: tjh@ic.net
Message-ID: <tjh-1908961801010001@p11.hubbard2.t.ic.net>
Source record: 139687

I've recently updated the Serial Communications information in Desktips. If you're interested in what serial information is stored in the DESKTOP.INF or NEWDESK.INF file, check out this latest update at http://ic.net/~tjh/atari/desktips.html.

Since I don't use the Atari for Web access, I'm not familiar with Atari Web browser capabilities. In an effort to give you a Web page correctly formatted for Atari Web browsers, I've added a page with two screen shots. Please take a look at the new page and compare the images with the Desktips page, then let me know if there are any differences. The example page is at http://ic.net/~tjh/atari/format-desktips.html. Click on the screen-shots themselves to go directly to the imaged section of Desktips.

Desktips is a (nearly) complete description of the DESKTOP.INF and NEWDESK.INF files. On the Desktips page you'll find suggestions and tips for manually editing the files and enhancing your Atari desktop, as well as a breakdown of each line of the INF files and a fully-annotated NEWDESK.INF file. Armed with this Web page, you should be able to make your Atari look and work the way you want it to!

Thanks!

Tom

2837. mod players

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: Susan Richards <srichard@clandjop.com>
Message-ID: <32193FC2.3A95@clandjop.com>
Source record: 139688

I need some advice on what would be the best mod player to try to get ahold of for my Falcon. I've been using Paula 2.4 a little bit, but it will only play 4 track mods (or maybe 8, I'm not sure) and I'd like to be able to play some of the 16 and 32 track mods running around, as well as S3Ms, DTMs, whateverMs, and basically whatever mods are running around out there. In addition, I'd like for it to have some kind of jukebox mode, and not barf just because I'm running in an enhanced screen-mode (i.e. it should be GEM legal). I don't care if it lets me create mods or not, just so long as I can play them back. Is there anything like this running around or am I just living in a pipe dream? I've tried MegaTracker v. 0.96 but it just flat locks up on my system. I've tried BobTracker, but it doesn't play all mod formats, and the same for Desktracker.

Later,
Gizmo

Thanks

2838. $39.00 SCSI CD-ROM drives forsale

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: cameron@solaria.sol.net
Message-ID: <4vasea$63p@solaria.sol.net>
Source record: 139689
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

```
* Refurbished Hitachi CDR-1750S External SCSI CD-ROM drives *
* $39.00 each plus shipping. *
* Buy two or more, $35.00 each plus shipping! *

Compatible with * IBM, clones, * Apple, * Macintosh, * Amiga, and most
other machines using a SCSI interface.

For multiple drive applications that experience much access and
multiple CD access, these are the drives to use. Don't bother with
changers that can't access more than one CD at a time and that have to
swap CD's around constantly. These were the best External CD-ROM drives
ever made and will outlive CD changers. They can NOT be converted to
internal drives, as they are TRUE external units.

Each drive is factory refurbished from Hitachi. Package includes the
drive, standard three-prong power cord, CD-caddy, Manual (printed in
English, German, and French), and a Hitachi warranty card.

Features:
---------
* Advanced access time (320ms average random access time).
* Data Transfer Rate (153.6 - 175.2 kb/sec).
* Large buffer memory for I/O (64KB).
* Right & Left channel audio output RCA jacks.
* 3.5mm headphone jack.
* Interface: SCSI BUS (ANSI X 3.131-1986), 50-pin shielded connector.
* Two 50-pin Centronics style SCSI ports (one "in" and one "out").
* Allows connection of up to seven drives per SCSI interface card.
* You may also run multiple SCSI cards in one computer.
* CD Caddy disc loading system (Caddy included).
* Audio playback circuit incorporated.
* Lens cleaning mechanism.
* Double caddy door for protection against dust.
* Power saving mode, for periods of inactivity.

Dimensions: 13" long, 9" wide, 3" tall.

Front panel options/features: headphone jack, volume control, busy LED,
disc LED, power LED, eject button, and power on/off switch.

Rear panel options/features: dual 50-pin Centronics style SCSI ports in/out,
Right and Left channel audio output RCA jacks, function switches, standard
3-pin power connector.

Function Switch Options:
------------------------
```

* SCSI-ID: 0-7
* Parity Checking: on/off
* Terminator: on/off

* Software for your SCSI controller is *REQUIRED* for almost all
* applications, and is not provided with the drives. Please verify that
* your SCSI controller manufacturer has drivers available *before* you
* order a drive! These are 1x speed drives.
* SCSI cables also available (not included).

Terms: Pre-payment with money order or certified check, or C.O.D. Drives
will be shipped via UPS ground, unless otherwise requested by purchaser.
Each drive weighs 12lbs. Shipping costs $5.00 to $9.00 depending on area.
Add an additional $5.00 for C.O.D. For exact shipping charges, send e-mail
with your UPS shipping address and zip code. Will provide voice phone
number upon request.

Ok, but will I be able to use Juno on my Atari ST computer? Since this
is the only computer I have right now, it's all I have.

Am I correct in saying that Juno uses something like Winsocket like a web
browser does? Maybe a front-end can be used with STiCK in the same way.
If someone can write a Atari front-end to use Genie...

Message-ID: <N.081996.195504.35@wxs5-6.worldaccess.nl>
Source record: 139694

Hi there!

The final issue of "ST NEWS", Volume 11 Issue 1 & 2, is ready. I just uploaded it onto ftp.uni-kl.de in the directory incoming/atari/. If you're quick, you can get it from there. Each ZIP archive takes up one hyper-formatted DD disk on the ST. If you have problems, just mail me. You will need an Atari with 2 or 4 Mb of RAM and a hard disk to merge both disks together into a huge self-decompressing ZIP archive. This issue of "ST NEWS" will only run on a machine with a hard disk or from a hyper-formatted (22 sectors per track) high density floppy.
If the files are no longer in incoming/atari, I suggest you check out /atari/diskmags or something like that.

2844. Re: <<>> Tos 1.98 (??) versus TOS 1.0 flaky drives???

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: graphic@delphi.com
Message-ID: <R3JQxJM.graphic@delphi.com>
Source record: 139695

<graphic@delphi.com> writes:

>It gets even stranger: I formatted a test boot disk on the STe that read
>fine on the STf before I bought it (in 720k DS format), but on using the
>disk on the STe that I formatted it on, I got an error message of
>"data may be damaged".....returned the disk to the STf and it read fine
>again....back to the STe and now it will show a Directory!!!!!

POSSIBLE SOLUTION: Perhaps particles of dust, etc were deposited on the
disks that were inserted in the "used" STf that I bought
it was a bit dusty on the outside.....
These particles could have made the disks temporarily unreadable, I suppose.
Next step is to try a wet system disk drive cleaner....Unless there is a good
reason not to.
Any comments re: this theory would be appreciated.
Subtext: What the heck is TOS 1.98....never heard of it,
but the program "the Statistician" reads that as the version number on my
1040STe. Are there any good histories/summaries of characteristics of the
various versions of TOS. Were only 1995 520ST's the ones that used
something like 6 ROM chips to provide TOS 1.0 and all later/other ST's
used a single ROM chip?

> I'm getting the following warning
>
> zoo: Warning:Archive header failed consistency check

The archive is fine. The problem is the server (which is unfortunately
beyond my control), which serves the archive with a content type of
text/plain instead of application/x-zoo. Those who have used the Web
interface to Umich's archive should be familiar with this phenomenon,
since they have the same problem with a number of files. I know that
Lynx's d)ownload command will get the file correctly; you might also try
your browser's "load to local disk" option.

[I explained this in e-mail earlier, Martin; did you not receive it?]

I think a little differently, in that I believe a doctors job is similar to a technician's job. They both look at symptoms, reach a diagnosis and then render a treatment. Although you say that engineers should be compared to medical doctors, I'm afraid medical doctor income just blows away that of engineers. A highly talented engineer might make only $90,000 a year, which is peanuts to most doctors. I think this country ought to be paying more for technical workers relative to medical doctors, but then medical doctors have a good system set up for high income. Thank you for your response.

Try setting your news server name to ratty.wolfe.net instead of whatever
CIX gives you. That should take care of news posting problems, anyhow. I
suspect you need the POP3 version of NOS to get email.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmers

I have a rather nice text adventure package called "Eidolon" that was (I think) originally written by some folx in the Pacific Northwest. There are a few features I'd like to be able to add to it, if only I could find the source code. This is a really versatile adventure construction kit, and I run it as a door (actually, several doors with different adventures going on) on STarship BBS.

Anyhow... IF anyone has any information about the name(s) and/or whereabouts of the author(s) of Eidolon (not the the Lucasfilsm game, this is something completely different), THEN please advise. Email preferred but not required.

Thanks!

Is there any chance of the authors of desktop replacements, such as NEoDesk, Ease, Thing, etc. adding a little util to their package ???

One that takes the current say desktop.inf/newdesk.inf file and converts it to the format used by the replacement desktop ???

The last time I installed the shareware Thing to give it a try I spent what felt like ages, re-creating my original desktop, with the right icons in the right places, and then setting up the applications for file times (eg. LZH/ZIP etc. for 2 in 1, .MOD for Modplayers etc.)

I'm sure that it wouldn't take too much to write such a program ???

Does anyone think such a thing is justified... or do people not have this same problem ???

ATb.

Hello,
I'm trying to sync Cubase to a 25 fps SMPTE striped multitrack tape. I then will have to use the Human Sync feature since there's already some live music on the tape.

Could anyone post the procedure (settings I should use in the SYNC window .) ?
I'm using the Midiman Syncman Plus.

Any advice would be greatly appreciated, I haven't been able to get Cubase to recognize or maybe even get the incoming SMPTE.

I think its damn stupid personally..... why couldn't they contact you
and ask ??? or just link to it ???

As retaliation you might consider putting all the maggie articles on your web page as HTML files, and not crediting them ??? :) (only kidding... two wrongs don't make a right and all).

>There's really no way to prevent such
>things from happening unless someone comes up with a way to quickly

>if there is proof that yours is the origonal...then you've something
>to bank on.

Proving that the HTML document was originally yours is pretty tricky, editing stuff out is easy, and time stamps can be changed. A dispute would be damn hard to settle.

I recall some new way of 'stamping' picture files so that the owner could be proved.

It did something like overlay a stamp, including names and dates of owners, in such away that changed pixel colour only slighty (I think).

Then when you wanted to prove that someone else had nicked your picture, you just took their copy, and applied an appropriate filter, which would show up the embeded text data.

The idea is that the data is hidden, much like that PGP clone thingy that hid encryted data in pictures also.

I'm sure that this method has been patented, but I'm sure you could make your own version for private use ???

>Maybe this is an idea for a new internet service?
>Someone can set up a really big server to "Register" important
>documents...the first one on the register is legaly the original.
>There's a lot of problems with this idea...but with a lot of thought
>it could be made to work...

Hmmm... big manpower needed, and besides if you consider what people would be regsitering then it might be majorly flawed:

The service would need major manpower, and so needs staff, who most likely would want paying. So you could consider the service a commercial one.

If you consider a web page that a large company say, Sony would want to put up, it has their name stamped all over it, and all their data. Noone in their right mind would want to pinch it... let alone pass it off as their own :)

This leaves private users as people who want to register their info, on say cheats for their fave games, their game/program reviews, or like the above example a Maggie history.

Now this is were the problem lies... is the private user prepared to pay to have their page registered ??? more than likely not.

>If it could be done cheaply enough...I think a lot of people would
>use it.

I think it would have to be way to cheap to make the service viable...
most people wouldn't be too bothered about their pages being copied to
have to pay 5quid off to register them.

The one last thing I have to say about this sort of behaviour, by
who ever copied the pages is that it manages two things:

i) To damage the atari commnity... Tony may now be less inclined to put atari
relevant data on his web pages

ii) To damage the web (I'm sure that this is the tip of the iceberg,
and that sooner or latter a problem like this is gonna become
widespread).

In my books this is very close to pirating shareware software, and in
a computer community, where shareware is a big part of the community,
its a pretty stupid thing to do.

So in future, link don't copy !!!!

ATb.

>>read emails and reply to them while you are online.

Actually, it can be done, but it's pretty unrewarding. To do this, you'll have to give up the idea of graphics, but I have done the following with good (although slow and ugly) success:

(1) Install ANSI-ST and ANSIfont in your Auto folder (this is to emulate a VT100 terminal, which most ISPs support).

(2) After logging in with NOS, telnet to your account (I know, it's a dumb idea, but it works) and login again.

(3) Type "set" and hit enter. Yhis should display a list of variables. IF there isn't one named "term," the type "set term = ANSI" and hit enter again. You may have to experiment to get one your particular server likes; you can substitute "vt100" and "st52" for "ANSI" with some success at some systems.

(4) To read email, type either "pine" or "elm" and hit enter. If neither of those works, try "mail."

Good luck!

>I would like to learn how to program GEM in C. Is there any good GEM >programming tutorials anywhere on the 'net?

Don't know where you'll find these, but here are two that should fit your needs.

First, the AEO Programmer's Journal (I think I found it on GEnie or CompuServe), in four issues. Covers a lot of Atari ST programming info, including C-specific and general GEM tutorials and tips.

Second, and perhaps much better, is the Professional GEM Programming series by Tim Oren (usually archived as PROGEM or OREN). These are an excellent series of tutorials and code snippets that present most of the GEM language. Oren was one of the GEM developers, so his tutorial is an excellent resource. However, it's also a bit old, so parts of it are somewhat dated (or, rather, it misses some newer parts of TOS).

Off the net, the great GEM reference is the Atari Compendium from SDS Publishing, authored by Scott Sanders. As of about two years ago, it was complete and up-to-date, including every routine found in the Atari OS ROMs from TOS 1.0 through 4.0x. You may have a hard time finding this book in stores these days, but I found it indespensible when I was writing Atari software. It's _the_ reference to GEM (as well as the rest of TOS).

There's also Clayton Walnum's C-manship Complete. It's a basic--but very good--introduction to both C and GEM; mainly GEM. Not only does it walk you through the basic parts of GEM--windows, menus, alert boxes, dialogs, and the rest--it has a five-chapter tutorial on writing a GEM application. It comes with disk and I've got a copy for sale that's in very good shape. Email me if you're interested.

Tom

2862. GFA Basic 1 -> 3 ???

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <840534926_OASIS_@phil4.demon.co.uk>
Source record: 139713

Does anyone have a copy of GFA Basic 1 that they could do a convertion
for me with ???

I just got a UUEncode/decode source file from hensa... only it appears
to be in GFA Basic V1, which I do not have.

If some kind soul with GFA 1, could export it at an .lst ascii file
then I would be able to do a converstion to GFA 3

Anyone willing to help me ??

Thanks and ATb.

Correct me if I'm wrong but doesn't the fastload bit also set stuff
for normal (read no TT Ram etc.) STs ??

As I recall setting this bit prevents the ST from clearing all the RAM
before executing. When this really comes into its own is booting a
4Meg ST. I use PinHead for this purpose... and it provides a great
speed boost.

Strange... I never got this error... went all the way upto 50000
before I stopped it with no problems.

I was using the Magic Patched version at the time.

BTW: to speed the program up, use:

INC index

rather than ADD index,1

its slightly faster

(Nb. note that multiple INC commands are often faster than a=a+5 say
:) I can't remeber where the brake even point is mind !)

>>are able to turn there hatred of the US into military action.
>>The Eagle has Landed.

It really stuns me that people _still_ post crap like this, and
strangely to this group.

I really hope that Eagle is fishing for flames with his posts so far.
If not then I have in front of me a prime example of why/how wars can
be started.

What really surprises me is that on such a global communications forum
as this, that people can be so ignorant/nieve/rascist.

Average Joe Bloggs in the street, I can accept as being rascist, but
some one who uses the 'net so often ??? someone who no doubt comes in
contact with foriegners every day ???

In the future Eagle, if all you have to say is like this go away and
start a group in IRC such as #US rulez, and argue your case with all
those that turn up :)

This newsgroup is certainly not a place I expect to read xenophobic
trash from some biggot.

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST.
I am also open to trade offers. E-mail me your list.

HARDWARE

Atari SF354 SS External Floppy Drive. Comes with power supply and
cable to connect to ST. Unit is in perfect working condidtion
but a little loud. Packed in original box. $15.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $75.00

TOS 1.0 ROMS. This is the original TOS on 6 chips. $5.00
---
520 ST external power supply. $10.00

Translator ONE by Data Pacific, Inc. This is a hardware box that
connects to the ST to allow the ST to read MAC and IBM floppies directly.
This is a hardware only device, just plug it in and forget about it.
This came out before Specre CGR for the software only MAC emulator for
the ST. $25.00

TT030 CPU. Unit has a dead motherboard. TOS 3.01 or 3.05, if you
need to know for sure I can open it up and look. 720k floppy.
No keyboard. Has 2 Meg ST RAM that is unsoldered. Nothing has been
scavenged except the keyboard and power cord. *Make Offer*

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

GEM'X by KAIKO. Complete with box, docs, and disks. $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

License to Kill by Domark. Complete with box, docs, and disks. $10.00

Omega by Origin. Complete with box, docs, and disks $10.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

Wayne Gretzky Hockey by Bechesda Software. Complete with
box, docs, and disks $10.00

Crystal Castles by Atari. Disk only $5.00

BOOKS

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00

The Essential Atari by Jerry Willis. A How to use your Atari ST.
Includes Installing and setting up, Selecting and using software,
and Programming with ST BASIC, LOGO, and GEM $5.00

PageStream 2 Manuals $5.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

2870. Wordwriter disk needed

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: 73777.660@COMPUSERVE.COM
Message-ID: <4v8io9$l4i@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 139797

I'm posting this for someone else. I admit that I know little about Atari St, so if it sounds like I don't know what I'm talking about...you're correct, I don't. But this friend has one and is not very computer literate.

As he was attempting to use, I guess it's, Wordwriter, he inadvertantly formatted the system diskette rather than formatting a blank to be used as a data diskette.

He said the label on the diskette reads TimeWorks for ATARI 520/1040 St v2.0-Wordwriter St Catalog #5352.

Is there a way he can either "unformat" the diskette or get a replacement?

Thanks a bunch

Dave

2872. <<>> Tos 1.98 (??) versus TOS 1.0 flaky drives???

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: graphic@delphi.com
Message-ID: <xxNQRwx.graphic@delphi.com>
Source record: 139799

My 1040STe reads as having TOS 1.98 using "The Statistician" software.
My original 520ST has TOS 1.0 in ROMS that I had installed.

Swapping disks formatted for 360K SS on the STe worked fine on either machine.
I just bought a used STf that reads as having TOS 1.0 but it will not read
(or even show the directory) any files on 360K files formatted on the STe.
It will show a directory of files on old disks formatted on the 520ST.
It gets even stranger: I formatted a test boot disk on the STe that read
fine on the STf before I bought it (in 720k DS format), but on using the
disk on the STe that I formatted it on, I got an error message of
"data may be damaged".....returned the disk to the STf and it read fine
again....back to the STe and now it will show a Directory!!!!!
What the heck is going on??? Is it aflaky drive in the new machine???
Is there some setting that needs to be made compatible....seems like I've
seen adjustable drive "seek rates" somewhere (just thought of this one)?
Or is TOS 1.0 semi-compatible with disks formatted in other versions of TOS?
Any help will be appreciated.

: George,

: I'm sorry that I can't help but I get the same condition on my TT. What
: computer
: are you having this problem with?
I had this problem as well. Putting TT2STHI as the first program in my
AUTO folder worked like a charm. You can find it in the /tt directory on
a.a.u.e (and its various mirrors)
: I too would be happy to find a fix to this problem. I was recently at
: a computer user group meeting (WAUG - Ann Arbor, MI) and one of the
: members
: had some success at home with Mintnet and CAB using a dialup PPP
: account.
I can verify that CAB, MintNet and PPP do indeed work together very well.
: You might want to give that a try, although it seemed to take quite a
: bit to
: set it up.
Actually, once you've got a functional X-window system (which should be
fairly easy with the TAF package), it's simple to get a multitasking GEM
system going. Get a mutlitasking AES (your choice of AES 4.1, XaAES or
oAESis (or, if you can find it, N.AES)), and start it instead of X after
you've logged in to MintOS.
: Does anyone have docs on how do do this?
There's a very good documentation page on installing MiNT available from
http://www.gti.net/azog/atari.html

2876. CM8833-II Monitor REPAIR advise ????

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: lex.us@zetnet.co.uk
Message-ID: <32181762.37083053@news.zetnet.co.uk>
Source record: 139803

I have a Phillips CM8833-II Monitor that has silently and smokelessly
gone dead. As I have been using the Hi Res monitor for some time I
have only just got round to looking at it.

I thought that it would be a simple fuse that had gone, but no such
luck. Looking inside I can see that the heating element of the tube
is not glowing, but do not know which are the heater pins to check the
tube for continuity, or the circuit for supply.

The nearest repairers want a minimum 15 ukp just to look at it. If it
is the tube that has gone I would sooner look for a second hand
monitor.

Can anyone advise me on a few simple multi-meter circuit checks that I
could carry out to assess possible economical repairs, please?

TIA
>
>I am asking for any help with software that will allow me to view colour

2877. SyQuest HD on ST

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: h9104374@hkuxa.hku.hk
Message-ID: <4v9glo$n8m@hkusuc.hku.hk>
Source record: 139804

Hello,

Could anyone please tell me whether I could connect a SyQuest
Removable HD (SCSI,44MB) on a STfm using ICD Link? Since I have to make
decision very soon, please reply me through email. Thanks.

Regards,

William

2878. Help with zippo?

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: dave <dave@mbha.demon.co.uk>
Message-ID: <840455345snz@mbha.demon.co.uk>
Source record: 139805

Hi y'all,

Is anyone out there getting news from news.zippo.com? If so, how are you
setting up the news files, I keep getting a connection message then
'500: what?' error, then it closes.

Any ideas?

Thanks in advance fer any help...

2879. Announce: PS/2 SIMM ST-RAM Upgrade

Newsgroup: comp.sys.atari.st
Date: 1996-08-19 00:00:00 UTC
From: ha-user@ux-01.bg.bib.de
Message-ID: <4v9n12$9ao@ux-01.bg.bib.de>
Source record: 139806
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

A pal of mine is busy designing a RAM upgrade board for Atari ST/STE computers with socketed MMU. This will hold one or two PS/2 SIMMS with 4, 8, or 16 megs. It will enable users to upgrade their ST to up to 16 megs, 14 of which will be usable by the operating system. The original memory cannot be used anymore, but since memory is so cheap these days, we don't feel that's a problem.

THIS IS NOT READY YET. I'm posting this message to find out whether there is something similar already available, which might save us the expense, and whether anybody is interested, to determine how many we'll have to make. Please reply to me via eMail, and don't post a follow-up unless you feel you want to discuss this in the newsgroup.

And, of course, please redirect flames to /dev/nul.

Yours,
Erik Meltzer
Hannover, Germany
email: melsh94@ux-01.ha.bib.de

They are Atari ST clones, only quite a bit faster and better.
There's also one called the "Eagle". Check out these two web pages
(unfortunately I didn't find anything on the Hades):

Can't help you there, but since you appear to have tried several desktops, maybe you could save some of us some trial time. Do you have a paragraph or so review of the different desktops? What are the features, strengths and weaknesses? For comparison, I have TOS.whatever.the.Falcon.has (I'm typing this from work, so I can't check.)

Thanks!

2883. Where can I get Neodesk Icons? and STnews download probs

Newsgroup: comp.sys.atari.st

>reason not to.
>Any comments re: this theory would be appreciated.

Sounds like a good plan. There are good reasons not to use such cleaners
on a regular basis, but if you suspect it really needs it (and yours
might), it probably wouldn't hurt any more than leaving it as is. Another
(perhaps safer) method would be to open the case and use a can of
compressed air to spray out the drive. While you're at it, you could also
spray dust off the rest of the internals. Whichever method you use
(hmm...perhaps you should use both: duster first and then wet cleaner),
you should probably clean both drives at this point.

Another possibility is that one or more of your drives is spinning at the
wrong speed. I've found that a difference of just a few RPM (3-5) can
cause similar problems to what you're describing. After you've cleaned
the drive, download a program to test the drive's RPM and check out each
of your computers. They should all be running at exactly 300 RPM (well,
maybe 299-301).

>Subtext: What the heck is TOS 1.98....never heard of it,

Never heard of it either, and I thought I knew them all. If you figure
this out, let the rest of us know!

>'500: what?' error, then it closes.

I used to get news from zippo, but it requires a password now... If I
remember well it is no more available since march or april 1996.

You can try passwords by telneting his port 119 and typing commands
(first one: help) but even if you have one, I don't think NOS nntp session
can use passwords...

Better forgive zippo and try another free newsserver, like
news.uni-hohenheim.de, ns.felk.cvut.cz or news.dyadel.fr (or ".net"?).
They change frequently, so better try keywords "free nntp" on a cherch
engine to get a list.

Is this the one where you have to pay? If so, I thought it required
username and password, which Oasis doesn't support (yet--hint, hint).

I've gotten the free zippo news server to work, but that was with Oasis
1.35 a while ago. I stopped using it cause it was slower than death.

In message <R1HRx43.graphic@delphi.com>, graphic@delphi.com said:

>What are the "hades" and the "Medusa"?

AIUI they are both designed and built by Medusa Computer Systems in
Switzerland.

They are both TOS compatable computers, with high specifications and
costs to match. 68040 and 68060 versions are available.

Hades has 4 PCI and 2 ISA slots, 1 VME bus, 1 EIDE and 1 SCSI bus
Base price with 68040 on 64MHz clock, 4MB RAM, 850MB, 1MB truecolour
grahpics card, NVDI ET4000, midi tower, keyboard and mouse is about
3475 German marks.

According to Carasys a Hades equipped with 68060, TT TOS 3.06,
NVDI3.02, and ET4000 1MB PCI graphics card, gave GemBench
results of:

Graphics 1713%
CPU 872%
Average 1489%

This is ref. TT with fastRAM, FPU, in ST high.

Medusa is available from MW Electronic in Konigswinter, and Hades from
Carasys in Saarbruken, both in Germany.

For more info on Hades have a look at http://www.carasys.de

Yes ofcourse I love that. Despite some people of the Aquarist Club
have pentium's and the likes they still ask me to make some very nice
dtp-work with Calamus and now to design their homepage. I always have
great pleasure when I see then struggle with their so called great
machines. Last I was by a member to preview the homepage with
Netscape. It tooks him almost ten minutes just to copied the homepage
from the floppy to his harddisk. Oh boy I do love that.

I've received a mail from someone who was using Netscape 3.? This
version shows background colors in table cells.
Thanks
Martin

.mod files may be in some mod archive somewhere or floating out in
alt.binaries.sounds.mods. Other stuff may be lost. It's unfortunate,
but probably true. If we do eliminate the "software only" restriction,
then we would have a means of distributing these files (which are
platform specific, thus making comp.binaries.atari a good choice).

From the Holy Book of <DwGCtn.Hop@cix.compulink.co.uk>
as spake by smithic@cix.compulink.co.uk ("Ian Smith") :

>I found it to be _very_ specific with this syntax; I only found one way that
>worked, and here is my MINT.CFG to use as an example:
>
[...]
>cd c:\
>exec c:\stik_cfg\gluestik.ttp
>cd u:\
>exec c:\auto\blowboot.prg
[...]

Yep, that looks about right. The story is this: there is no way AFAIK
for a program to determine what drive the system booted from, so I just
assume that no cd's have taken place and the current drive is the boot
drive.

For now I have uploaded beta1a with a quick fix for this problem.
GlueSTiK will now (a) tell you exactly where it's looking for the
config file, and (b) use a minimal default configuration if it can't
find the config file. The URL is
<URL:http://www.cs.duke.edu/~dsb/files/gluestik_beta_1a.zoo>.

>drive before the line that exec's GlueSTiK.

I found it to be _very_ specific with this syntax; I only found one way that
worked, and here is my MINT.CFG to use as an example:

```
CON=u:\dev\console
PRN=u:\dev\console

cd c:\
exec c:\stik_cfg\gluestik.ttp
cd u:\
exec c:\auto\blowboot.prg

setenv UNIXMODE /-ru
setenv TEMP /tmp
setenv TEMPDIR /tmp
setenv PATH
.,\bin,\usr\bin,\usr\local\bin,\usr\etc,\usr\ucb,\usr\bin\X11,\usr\local\bin\X11
setenv HOME \home
setenv SHELL \bin\sh
setenv TERM xterm
setenv PCONVERT PATH,SHELL,HOME,CDPATH

sln e:\usr\bin u:\bin
sln e:\etc u:\etc
sln e:\usr u:\usr
sln e:\home u:\home
sln e:\tmp u:\tmp
sln e:\var u:\var

exec e:\usr\etc\syslogd
```

Hope this helps any other strugglers!

Ian Smith.

>About the direct copying of Tony "STOSSER's" Web page:

Hmmm, My original posting wasn't too bothered with the actual copying, I made a point of accusing no one and that I did not know who was to blame, no one has come forward or answered my emails, so who knows?

I did not like seeing a review in ST Format and someone else getting the credit, add that to the fact tht other ATARI pages have now (quite innocently) used the url from ST Format as a link to the maggie page, so I lose out with visitors now as well, ST Format are not to blame either,

But 2 points I felt needed bringing to someones attention:)

1) It should be linked to, not copied?, this could of course be down to someone not being aware of the rules?, hence the reluctance to try and blame anyone:)

2) The only thing altered in the whole document was the link to my page, now that was what really got up my nose, you don't need to know the rules to know thats wrong?, very wrong!

I aint too interested in copyrights etc, it was just someone sat there and removed any connection to me or my page, that was the problem?

Anyway, life must go on <smile>

Cheers.............!ynoT

You might have better luck if you post this to the newsgroup:
sci.electronics.repair.

Even then, you will probably be advised to go to the following site:

http://www.paranoia.com/~filipg/HTML/REPAIR/

& read the reapir FAQ's.

From my limited experience in repairing monitors, it might be the Power
supply, the line output transistor, or the line output transformer.

That list is in order of expense, so a dead LOPT is expensive.

Unless it was dropped/abused, the tube should be fine.

You are probably looking at a hefty repair bill (maybe £50-90) unless you
can do the diagnostics/repairs yourself.

If you are not familiar with high voltage electronics, then don't attempt
repairs. Any TV repair shop/person should be familiar with monitors.

good luck.

Can someone enlighten me on the proper way to hook up a CD Rom drive as I keep thrashing partitions with my 2X hooked up.

My effort was to hook up the Link adapter to my hard drive, a SCSI cable from the other port on the hard drive to the CD Rom drive, and a pass through SCSI terminator on the other port of the CD Rom drive.

Where is this solution failing me?

Jeff

Source record: 139637

OK,

I've read through the last 108 messages and read the *Last* issue of ST Format
and want some direct answers:

Q1: Can I successfully www/email/ftp/telnet on a standard DSDD
floppy driven 1040 STF with a V34 Motorola Modem and SM124 screen?

Q2: If so with what software? I have access to both Demon (UK)
and CServe as providers - CServe for email mainly.

Incidentally I always squeeze more out my floppies with extended formats...

I know its asking a lot but, well I've had my old STF since May 1988 (new) for
MIDI and really never been interested in comms. Now I'm mad for it and have been
on-line with a little Sharp PC3100 palmtop for over a year and am really set up.
The worry is that should my palmtop develop a fault I've no way to get my mail
etc.

I've already made use of the ST with GhostLink in case my external PC floppy
dies! And, I intend to MIDI-up my Palmtop with Cakewalk should my ST die!
All in all I like the 2 of them to get on together and they do largely, this is
an important next step!!

I know these questions are asked frequently but noone talks about a floppy only
setup on 1Mb... It is really for emergencies/pure devilment you understand!

I also love playing KickOff2 and Player Manager and would love to hear from
anyone who has any editors for these...?

...I was sorry to see the last issue of ST Format - a great era ended.

>
>Is this right? What should it be?)

It's close enough. Intel's mail server is down this morning. My personal
address is starship@3rdplanet.com (Rich Tietjens) and that may be up or
down also - the ISP is going through a painful upgrade.

>>Latest UUCP-ST and Wormhole updates (version 1.2) are now available at
>>http://www.3rdplanet.com/~starship/atari.htm
>
>Is this a program that I can use to send and receive email and news via a
>UUCP connection to my ISP?

It's gateway software; requires NOS (or manual operation, very painful) and
gates messages to and from fido-style message bases. Wormhole simply grabs
certain outbound Fido packets and throughs them through Internet email
(instead of letting you make long-distance calls), and does the reverse for
inbound Fido packets found in email.

>If so, is the email and news in such a format that is is accessible by
>Tin and Elm?

Not applicable. You'll need LED, Tmail, or a fido-style BBS to
read/reply/enter mail and news.

>Will it work nicely under a Unix style environment with MiNT, MiNTOS,
MiNTNet?

I don't have MiNT working properly, so I can't say. It's fine if I want to
run things manually, but fails to properly change the current working
directory for TTP files; thus, I can't use MiNT to run the system
unattended.

>I am currently trying to use Taylor UUCP. This looks like it would do the
>job, but the trouble is I know absolutely nothing about UUCP and am
>finding it a bit tricky to set up. (If anyone can help me with this,
>please do!)

I'm unfamilier with this package; give me a URL so I can ftp it, and I'll
see what it takes to make it work.

Weird indeed, I was hoping you were short on memory, or running on a
TT, as what you describe would then fit. However I know the new
Oasis/ICE combo does take a lot less memory so it may solve your
problems too.

>The other only problem is the bad packets, I think, but I have not experimented

[about the best universal mod player]
>I've tried MegaTracker v. 0.96 but it just flat locks up on my system.

MegaPlayer is now at revision 1.15 (surely at sunsite.cnam.fr) and has
all what you need, S3M/XM/DTM/MTM/etc replay, juke box, GEM, and even more
with the registred version, as the wonderfull spectrum analyser window in
iconified state :->.

It's very stable on my Falcon, but no miracles: if you load a
corrupted module, it crashes sometimes...

Otherwise, there is another player in ACC, but based on the
MegaTracker routines, and another one must be soon-to-be-released, based
on the GraoumfTracker replayer (not done by the same coder). Not heard
yet, but as a tracker the Graoumf has a very good sound, especially now
that he can interpolate some voices...

I rarely use desktop ACC players, I prefer to hear modules in trackers
and generally use the Graoumf... or Digital. Graoumf best for 16-32 voices
from-PC formats, some MODs and GTK/GT2s, Digital best for some old MODs
and DTMs.

Mann... I know what you mean. Fortunatly one of the big cheeze on my
provider is real cool and stuck with me 'till I got it working. I had the
same problems and here's what I found:

: It is eternally trying to "Register host" under CAB, "Register" under IRC,
: and "Register" under Antmail! Nothing works! On CAB, after a 10 minute
: wait for the "registration of host" to finish, I get a blank page, no
: matter WHICH site I choose! All of my info is correct.
: ---

Being that all you info is correct you need to use a text editor that
will not... don't format you text at all. First I was using WorDPerfect,
It didn't work, Then I used a text editor I had, still didn't work, Then
I got another text editor with one of the other computers I brought.
Guest what... It worked. I found out that when you type, and save, spaces
are added that you dont see. I found this out when I typed something in
WordPerfect, saved it as text, and went to edit it in the other program.
There was 2 cr at the end of each line instead of 1. But in WP or the
other editor This didn't show up.

I hope this helps! Let me know what happens.

No need to do that as the author of RSVE delivers the circuits complete and
ready to install (for a fair price). IMHO it's easy: just four wires to
connect.
Then you can get higher baud rates than 19200 on an ST

I believe Link (v1)'s have been "powering" SyQuest 44's for almost
as long as they have been available, I don't think you'll encounter
any troubles. I have Link II and the $100 EZ-135 and they work
wonderfully also! :)

Andy

There are already numerous groups specially made for bigoted idiots -
alt.nuke-the-USA, alt.nuke-Europe, etc. What baffles me is why anyone
would WANT to read such a newsgroup.

>This newsgroup is certainly not a place I expect to read xenophobic
>trash from some biggot.

Yes, we expect that sort of thing in *.advocacy, don;t we? <G>

>Stuart@shaw1.demon.co.uk

Type '?' on the NOS command line... then you'll get a list of the main
commands.

For sub commands, eg. within NNTP there say NNTP kick and NNTP status,
type NNTP ? to get a list.

For a description of what each command does, read the docs that came
with NOS.

2925. Positive Image Upgraded to v1.1

Newsgroup: comp.sys.atari.st
Date: 1996-08-20 00:00:00 UTC
From: sdelaney@steil.wintermute.co.uk
Message-ID: <840461384_OASIS_NEWS@steil.wintermute.co.uk>
Source record: 139652

PRESS RELEASE 20th August 1996
****
POSITIVE IMAGE V1.1 OUT NOW
****
Things may have been a little quiet on the Positive Image front recently, but there's good reason for this. We've been hard at work improving the package still further, reaching towards our goal of producing the most powerful image processing and retouching package for Atari computers.

The initial release achieved all of the above and more but, lets face it, it was a bit on the slow side. Although we all love our Atari machines, they are not exactly the fastest by today's standards and image processing is undoubtedly processor intensive, so the downside was the speed at which things happened, mostly in the screen redraw and printing departments. Some competing packages were faster on the redraws (none offered printing directly so that was not an issue) but they paled into insignificance when compared feature by feature to Positive Image. They concentrated on speed, we concentrated on features, you can't have both....or can you?

Well it appears that you can, within limits. Here at Floppyshop we have gone back to the drawing board to squeeze every last ounce of power out of your 68x00 chip and the results are plain to see. Screen redraws are around 40% faster in 256 colour modes for a complete redraw. More importantly, in v1.1 the tiling works 'intelligently', redrawing only the tiles where changes have been made. There is no reliable way to measure this increase as v1.0 used to walk through each and every tile, the larger the image the longer this took. Now (after the initial load and draw) ALL subsequent redraws are near instantaneous with only UNDO or APPLY MASK ever requiring the entire screen to be redrawn (for obvious reasons). The amount of time saved when editing any image is enormous!

Another area which has received a major upgrade is the printing. Without affecting the quality (which was always superior to any other printing package on the market), output speed has been improved so that it is now on average 335% faster (not a misprint, it takes less than 1/3rd of the time v1.0 took!) at outputting an A4 size image to monochrome printers and about 35% faster at printing to colour printers.

A new feature of the upgrade is support for multiple masks active on the same image. This requires a little explanation. In v1.0 it was possible to define any region within an image and create or load a mask to be previewed for that area. Assuming you were happy with the result, it was a simple case of applying the mask in order to permanently integrate it into your image.

If you defined a second region (before applying) and created/loaded a mask for it, the first region would be lost. In v1.1 you define a region, load or create a mask then (without applying) define a new area and repeat the procedure. The result is that (although the block definition for the first region is removed) the original masked area remains intact along with your new definition. Repeat this as required. When you have finished with masking, select APPLY MASK and all defined regions within the image will have their preview masks permanently integrated into the image in a single operation. This is a great time saver and adds considerably to the functionality of Positive Image's masking capabilities.

Amongst the most notable of the miscellaneous speed ups is the trace area tool (commonly known as the Magic Wand in several other packages) which now auto traces areas (subject to a user defined tolerance level) at around three times its previous speed. Invaluable for selecting/eliminating specific areas of background or foreground within an image. Its editable partner, the bezier tool, is a bit faster than before but more importantly, it is now pixel precise in its selecting of control points and editing of curves even at the highest zoom level.

Finally, we have fixed the filtering bug which prevented images/regions within images from being filtered right up to their edges! Lots of other minor bugs have been eliminated (we didn't have any major ones) and the functionality of certain minor elements within the program has changed, all in the name of progress!

PRICING
****
We decided to hold Positive Image at its launch price until v1.1 was released. As this has now happened, we reserve the right to revert to full RRP of 79 pounds at any time. Having said that, the current price remains at 65 pounds + P&P (2 pounds UK, 5 pounds Europe, 10 pounds rest of world). UK customers can pay by cheque, Postal Order or Credit Card (except Switch). Overseas customers should order from our distributor in their country (list follows). If we do not have a distributor they can of course order direct from Floppyshop. Please note that when ordering from Floppyshop, payment must be made in UK pounds sterling. The easiest way is to pay by credit card, but we also accept Eurocheques, International Money Orders and Post Giros (in all cases they must be made out in UK pounds sterling) or by way of a cheque drawn on a UK bank.

UPGRADING
****
Those of you who have already purchased Positive Image will be pleased to know that you can upgrade by returning your master disks (disks only, not the whole package!) along with the upgrade fee of 5 pounds + P&P (UK & Europe 1, rest of world 2 pounds). Customers in North America should contact Computer Direct (support@compdirect.com) for details of how to upgrade their copies.

NEW DEMO VERSION
****
For those of you who have not yet purchased Positive Image, a new demo of the latest upgrade (v1.1) is now available for downloading. The demo on the ST Format cover disk and on most ftp sites is pre-v1.0, although it says v1.0 on the info box. It is VERY old and you should not waste time downloading it! Instead, the latest version is available by anonymous ftp from Wintermute. Here's how to get it:-

```
ftp ftp.wintermute.co.uk

log in as ftp, give your email address as your password, then type the
following two lines.

cd home/s/steil/outgoing/
get pi_demo.zip
```

POSITIVE IMAGE DISTRIBUTORS

>> :
Eventhough, I just purchased a new PC, I'm still hanging on to the old
Mega, The reason-- KCS. i've been told that there are "similar"
programs available for the PC--but at such a cost (a couple of
hundred dollars)!
I started midi-ing with a 520 and KCS v1.0 many years ago. and served
me well through many clandestine upgrade paths. I got Omega (or most
of it...I had tiger and sound edit from earlier incarnations) from a
brit mag like ST Format and refuse to abandon it!
While I have cubase for the Atari and PC now--there are still certain
things that are done better (though not easier) with KCS! Ialways tend
to think that KCS tends a bit more towards the organic while Cubase
leads you straight into a dance mix....

2929. Re: Draft RFD: comp.binaries.atari.{,discuss}

Newsgroup: comp.sys.atari.st
Date: 1996-08-20 00:00:00 UTC

Source record: 139720
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

In article <4v0mao$5jn@mark.ucdavis.edu>, Eric Hays wrote:
: Thanks for taking the time to create this Kyle. A few comments:

: Kyle R. Hofmann (rhofmann@crl.com) wrote:
: :
: : REQUEST FOR DISCUSSION (RFD)
: : moderated group comp.binaries.atari
: : unmoderated group comp.binaries.atari.discuss

: Is it possible to just use comp.sys.atari.st to discuss stuff in
: comp.binaries.atari? Why create comp.binaries.atari.discuss?

Yes, it's possible, but not everything posted in c.b.a will be ST
related. It's better to be more general in this case and to create a
.discuss group to handle all traffic concerning c.b.a.

: I know I won't go looking for something in c.b.a. unless I read about it in
: c.s.a.st as I don't intend to poke my nose in there if I can help it.

Hmm... It would possible to allow crossposting of part 0 of uuencoded
files to other comp.sys.atari groups (part 0 is traditionally a
text description, while parts 1 and up are the file itself). Is this a
good idea? It may not be, especially if we get a lot of postings to c.b.a.

: Also, does it have to be moderated? Seems like that was the cause of
: problems before.

Yes, it does. Nobody has tried to create a moderated comp.binaries
groups since comp.binaries.apple2 a long time ago, and that was changed
to moderated eventually. The proposal won't be accepted by the
news.announce.newgroups moderator if it isn't moderated.

: And then, of course, comes the issue of: do we really
: need this.

IMHO, yes.

: Right now I'd say we do, primarily because there is no satisfactory ftp
: site. I wish we could set up a really nice network of ftp sites (one
: in US, one in UK, one in Germany, France, etc...) that all mirrored the
: complete archive. U-Mich used to do this, but seems to have gone all
: rough around the edges.

That would probably be a very good thing, but that would still exclude
those who don't have FTP access. :(This way we can include them (as
long as they have Usenet access) and not worry about having to set up FTP
sites.

: In article <4v0vq1$2gu@agate.berkeley.edu>,
: maffia@fox.CS.Berkeley.EDU (Anthony Maffia) wrote:
: >(snip snip snip snip)
: >> REQUEST FOR DISCUSSION (RFD)
: >> moderated group comp.binaries.atari
: >(snip snip snip snip)
: >
: >Please modify the proposal to allow music and picture files specific
: >to the Atari 8-bit computer to be posted.

: Hmmm, as long as we still prohibit MOD files (which do have an appropriate
: venue for distirbution), I think we might consider Atari-specific files.
: Technically, the "chip music" files for both the 8-bit and ST series
: probably could be considered binaries in that they are obviously not
: graphics nor text, and they aren't useful on any other platform.

This is certainly an important issue. Chip music files don't have
anywhere to go (unless one newgroups alt.binaries.chip-specific :) and do
deserve some distribution. But see below.

: 8-bit graphics files are so tiny (<=8K as I recall) that I don't have a
: problem with that, either. ST-resolution graphics would have to be pretty
: special to qualify, though; 32k isn't huge but it's big enough to be a
: nuisance if a lot of them are posted, and frankly, while I love the
: systems, I am underwhelmed with most of the graphics that have been
: produced for it. This is a case where I think http distribution does make
: more sense.

I don't have a problem with 8 bit graphics files in terms of size, but
conceptually, I can't see a group meant for Atari binaries in general
excluding binaries for the ST simply because of their size. I don't
think it would be a problem, though, as 32k isn't all that big in
comparison to other things that are posted.

I recieved e-mail concerning an issue similar to this from someone
recently, but it was more general. The issue was: What kinds of data
files are to be accepted? If you think about it, it's important if you
plan to moderate the group much more than "no WaReZ".

To my knowledge, there isn't a proposal out there that has discussed
this issue much, mainly because all the comp.binaries groups that have
been proposed so far haven't tried to limit themselves much beyond what
platform they are for.

My response to this question is that we should probably post data files used in the operation of software. For example, if I draw a picture, it wouldn't be distributable on c.b.a because, after all, it's only a picture. If I create a character set for use with a word processor, though, then that would be distributable on c.b.a because it's used during the operation of the software. (I hope you're all not confused :) Does anyone else want to contribute? If you have a good idea, post it.

Yeah, but I find it really annoying that there are so many incompetent
doctors out there making so much money. I'm just a mechanical engineer, but I
had to bawl out the idiot (though technically skilled) surgeon that worked on

my dad's burst appendix (which another idiot doctor let go so long it burst, not to mention the lab that lost his blood sample) because he didn't pay attention to the peritonitis that developed as a result of the appendix bursting (_very_ common, he should have at least left instructions for the nurses). My dad bloated up like a balloon and the nurses could "do nothing" because the doctor couldn't be reached, in spite of numerous pages. I guess in retrospect, I should have had my step mother use her position at the phone company to find the doctor's number and address, so I could drive him to the hospital personally (and painfully).

My dad said the nurses were talking about the verbal assault I visited upon that moron weeks after my dad was released. At least I had the good fortune to bawl him out in front of the nurses' station.

Dan

BTW, doctors' pay is _nothing_ compared to those vulture CEOs that wipe out thousands of jobs, then keep a percentage of the "savings" to the company. Try 70-80 times what the average full time employee makes.

All of the above. Any Atari software is acceptable. If someone writes
a Jaguar or Lynx emulator, that would be accepted too, along with
titles. This is intended as a generic Atari software group, not as an
8bit or 16bit specific Atari binaries group.

Kevin L. (afa225@freenet.mb.ca) wrote:
: I know Atari doesn't make comps anymore and the Jaguar was a bust so what have they been up to? And why is
: there stock at $4 on AMEX?

My impression of Atari corp is that it's basicly just a bundle of cash left over from a slow liquidation process of a once competitive and quite promising corp. It looks like the Tremmels (SP?) do this at least twice a decade...as they've managed to do the same thing to Commadore...and most likely will do the same to JTS. See, they buy out companies that show promise to chrun a healthy profit while being liquidated. In the case of Atari...they had a warehouse full of game consoles (2600's) and the work force that created them to gracefully liquidate. The home PC market was basicly a new target, and Atari saw a chance to squeeze a few more bucks with out pumping a whole bunch of cash into it. They found a way to cut back staff and facilities while putting out a hand full of ST related products from time to time to justify their being a corp who can raise money on the exchange. And...they just strung along...slowly closing plants and discontinueing products until the perfect time to bail. After planning a possible short term cash maker (the Jag), Atari won a big lawsuit (or possibly more than one) that gave them tons of CASH. Rather than marketing the Jag and churning out games for it...they took the money and ran. This has been a trend with the Tremmels... buy...build up cash...get rid of assets...close it down.

I hear they've recently merged Atari with some kind of Disk Drive company called JTS. Will they run JTS in the ground to build up more Tremmel Cash? Or will they actually spend some Tremmel Cash to build a good strong JTS corp that actually creates jobs, and churns a profit not only for the Tremmels...but for everyone involved in the JTS product line?

This really ticks me off...
Atari could easily be a PC standard to this day...
They were big kids on the block when Bill Gates was
still in school. But rather than truly compete and market...
they liquidated...closed...layed off...discontinued...took
the money...and ran.

>h{ printer setup on LDW power.
>h{ You can access that as /ppos I believe.
>
>What's /ppos?

LDW Power has the same "slash" commands as Lotus 1-2-3

Press the slash key to (/) to bring up the menu bar and then you can choose an item from that menu with your mouse .. or with your keyboard by pressing the first letter of any of the menu items.

So press / then P for print then another P for printer then an O for options and an S for setup. The setup line should be blank as all you want to do is set up the margins in LDW Power and set the font etc on your laserjet. If the setup line has some code then either that code has to be proper laserjet setup code or it will be printed as a piece of gibberish at the top of your page. I do have some laserjet escape sequences that can set the laserjet, but I never bother with that. Instead I set the margins to 160 or so, and then on the printer itself (from the laserjet menu) I set the font to compressed print. Oh yeah, in LDW Power you do need to set the page length to 60 lines, and on the Laserjet you need to set pagelength to 60 lines. Then get after whatever you want to print ... text only, no graphs without GDOS installed.

: Thanks again, I greatly appreciate the help,

: George Garner

If you are using a TT, use TT2STHI in the AUTO folder, if you are using a ST, use a mono monitor (I don't know, maybe Sebra might work? Doubt it, but who knows?), and if you are using a Falcon, set your NVRAM to 2 colour mode. All of these worked when I was testing it on my STe, my Falcon and my friend's TT.

I have a Mega ST2 and a Megafile 30 for sale. No keyboard, monitor,
mouse, nothing but the CPU and harddrive. Condition of both is unknown,
other than they power up when plugged in and turned on.

Best offer over $5 + shipping.

Thanks,

Carl Nation

Uh... I'm not sure what you're trying to do, but I'm pretty sure it won't
work, unless you're trying to use a Moniterm on a TT. The Vikings came
with proprietary video cards of an oddball standard. Fortunately, the TT
almost makes that standard, so you can tweak the internal pots to make
it work. I have the directions to make a cable for the TT/Moniterm, but
am not sure where it is, maybe someone else can help there?

BTW, Toad should be able to supply the TT/Moniterm cable. It's the same as the
TTM-194 cable, you just need an adaptor to match the monitor end of the cable
to the Moniterm.

Hi Daron!

I have a 520ST upgraded to 2.5 Meg RAM, TOS 1.2, with System Solutions 170 Meg
HD booting from HDDriver v3.7, then using Superboot V7. My problem has always
been the same whether running with all my regular accessories or running from a
clean machine.......once in Oasis2, I cannot escape. If you quit from the menu

or quit using the keyboard command the effect is the same.......instant lock up. The cursor vanishes and the thing has frozen up solid. The only way out is reset.

The other only problem is the bad packets, I think, but I have not experimented too much on line yet as I have had a dickens of a job getting it set up. But that's another story!

If you can help, I would be happy to have your children.

Simon

(I tried to post this to Rich Tietjens' email address, but it got
returned twice, so I am having to post it here. The address I used was:

RichardX_Tietjens@jf.intel.com.

Is this right? What should it be?)

In <4ut25n$3ao_001@jf.intel.com> you (Rich Tietjens) wrote :

>Latest UUCP-ST and Wormhole updates (version 1.2) are now available at
>http://www.3rdplanet.com/~starship/atari.htm

Is this a program that I can use to send and receive email and news via a
UUCP connection to my ISP?

If so, is the email and news in such a format that is is accessible by
Tin and Elm?

Will it work nicely under a Unix style environment with MiNT, MiNTOS, MiNTNet?

I am currently trying to use Taylor UUCP. This looks like it would do the
job, but the trouble is I know absolutely nothing about UUCP and am finding
it a bit tricky to set up. (If anyone can help me with this, please do!)

Thanks!

Hope to hear from you soon.

I'll thank you not to mention Windo$e in this group! ;-)

Superboot indeed will, X-boot is a bit more "practical" (less frills).
Look in the /Sound/ directory on atari-archive, there are a few utilities
in there that do just this task.

My Windo$e has Snake from The Simpsons saying "Oh NO, Beta!" (_I_ thought
it was funny anyway ;)

2953. FS/T: Atari ST games [08/20/96]

Newsgroup: comp.sys.atari.st
Date: 1996-08-20 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <4vcdcg$5p6@dfw-ixnews4.ix.netcom.com>
Source record: 139744

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 08/20/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first item and $1.25 for each additional item, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. My personal
philosophy is that something is only worth what someone is
willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 8.50 A.L.C.O.N. (Taito)
$ 6.00 All Aboard! (Terrific Software)

I dont know your sync unit as I use the SMP2 with Cubase, so for advice on
that I would recommend that you subscribe to the Cubase mailing list,
instructions of how to so do I will place below. There is also a handy
little accessory for creating a Cubase mastertrack when syncing to "already
existing " music on tape which I will send to you uu-encoded if I can find
it. If the original music was done to some sort of click in the first place
however, you may get lucky by setting a single exact tempo from cubase,
once you get your SMPTE sync working, and a start time set. Here are the
instuctions for joining the Cubase mail list which is a good place for any
Cubase advice.

Richard

As I recall Twist (3??) was the latest database published, and
apprently very very good indeed.

BTW: its commercial

I've never tried it mind... still using a rather old, Data Manager Pro
<G>.

I can't remeber which STF the last review of Twist was in...but if you
want to know, email me and I'll find it for you.

>Bye.
>
I'm not sure but IIRC the SC1224 and Philip's 8833Mk2 were the same
monitor, but with different cases ??

If this is true then you can plug a video into the monitor, provided
the video can output composite video signals, and sound.

On the back of the 8833Mk2 and (I suspect) the SC1224 there are 3
phono connections, two labeled L and R sound, and the third marked for
composite video input.

If you take the scart or composite video connection and connect the
correct pins (can't remeber.... check a maplins catalog, or the
video's manual for the pinout of a scart), and connect to the monitor,
then select the correct switch (their are several push switches which
select the input), and you will be able to watch and here the video.

Without an adapter however you cannot use the antenna from the video
as an input, as the monitor contains no tunning circuits (these used
to be available at extra cost).

As to a Mega-STE with no modulator..... bizarre ! Mine does have a
modulator so no problem there.

There is no way to plug a none modulated Atari (or any computer) into
an antenna _only_ TV, unless you can buy/find/make a modulator
(external probably).

I welcome the plans as they are. I just hope the moderater is
thinking well into the future ??? Now is well and good, but when/if
the moderator starts getting lazy then I'm sure the group will suffer,
I hope you are gonna stick to your guns Rich :)

Can I also request that if the moderator _does_ get sick of the job
etc. that he _quickly_ tries to find a replacement moderator, rather
than letting the group postings trickle on in small numbers ???

<G> I once had that problem too ! :) after re-installing from a
backup.

Find the file called NNTP.DAT (\Oasis\spool\), mine looks like this:

news.demon.co.uk 960818 222130

comp.sys.atari.st
demon.ip.support.atari

The numbers accross the top are the date it last download news on:

eg. news.demon.co.uk YYMMDD HHMMSS

Its likely that your are set to some months (years ???) previous, and
so all the articles from the date in NNTP.DAT upto the current date
are retrieved ! :) and if that date is a few years back you'll find
that you'll get loads of articles :)

There's a little screw on top of the modulator box itself. iirc, it's
carbon so be very careful what type of screwdriver you use.

You are correct, POP NOS works fine on Demon.

pubnews has not worked for months - iirc, Demon started using that
machine for something else.

Sorry James! Rosemary MacCallum originally posted the for sale message! I
just clipped out what I didn't want and replied to her, asking for her to
save the Conner 130Meg drive mechanism for me!

On Mon, 19 Aug 1996, James R. Saleeby wrote:

There's a package called GEMBOOT that does a number of cool things,
including set the environment strings; it doesn't work properly with TOS
1.2, but it might on the Falcon. I think I found it on the Gemini CD-ROM.

>>Also I do not like the way my partitions worked out! I have

There is a utility at Uwe's page that allows you to change the maximum
partition size in AHDI - I downloaded it, but didn't use it because I plan
to get HDdrive anyhow; but it allows clusters (virtual sectors) up to 16k
in size using AHDI. I haven't stopped to work out how many megs this comes
to per partition, but it seems it should be nearly a gig if 4k is the
standard cluster size.

The Smooth One (smooth1@panix.com) wrote:
: I've been using Stik and Cab, with a 65% success rate, and some web sites
: bombs out when I go there.

Which version of CAB and STiK are you using. There was a problem in earlier version, but lately the package has been pretty solid. The only problem I've had lately was moving to a 1 meg machine from my 4 meger I am now crashing sometimes (which I think will be sorted out when I find a cofortable setting for the image cache).

: Cab question:
:
: I've been trying to get the external program thing down. When I call up a
: page with graphic, text, etc. Nothing different happens. Are there
: special programs needed to get this to work or am I useing the wrong
: extentions and should us html at the end? Does the external program get
: the graphic info in the html script? If not... what is the purpose of it?

The external program will only be called upon when a file of the proper extension is sent over. If you've set an external viewer for .GIF, for example, and click on a link e.g. http://someting.html then the external viewer will not be called, CAB will use its own graphics code to display any gif's that are part of this page as inline gifs. But if you link to http://something.gif then the external viewer will be used.

Nope: here's another, though I'm using Teradesk 1.4. Must admit, I'm surprised more people don't use it. It's missing a couple of bells and whistles compared to the likes of Thing, but these can be got round:

You want program groups? There are a couple of programs out there (Alias and Menumaker, IIRC) which will let you create folders full of aliases: you then drag the folder onto the desktop (giving it a suitable icon in passing) and voila!

Wallpaper? Use DeskPic.

Only thing that would be handy is long filename support under MiNT...

: problems to display correctly the pages. For example: The mainpage
: (index.htm) contains a table of wich the left side should have a
: pale yellow (#FFFFCC) colour. Cab displays this very nicely,
: Netscape not at all.
: I wonder if someone could take a look at the sources of the pages
: to see if I have done something wrong.
: All the pages should have a background picture and all the tables
: except one should have a backgroundcolor.
: One but, the pages are all in Dutch.
: The URL can be found on my sign-off.
:
: http://www.ping.be/~ping1030/index.htm
:
I see that you have your color settings in quotes which might be a
problem - should be vlink=ffaa22 not vlink="ffaa22".

CAB seems very tolerant of some errors - I've done some horrible quote
errors and not seen the results until checking with Netscape the next
day. Lynx is also good for finding mistakes - the lack of graphics lets
you see things you would otherwise miss (plus a lot of folks like to do
quick browsing and come back for the graphics later so a good text check
is worthwhile.

Hope that helps - you have a nice looking page there, even if I can't
read it 8-) Hope you'll visit avialantic.com when you get a chance.

2978. Shareware and registration keys

Newsgroup: comp.sys.atari.st
Date: 1996-08-21 00:00:00 UTC
From: phil4@phil4.demon.co.uk
Message-ID: <840731190_OASIS_@phil4.demon.co.uk>
Source record: 139519

I just re-read Frank Charlton's article in STF 66 on Shareware piracy, and thought a few points.

Most of the piracy problems seemed to be with programs that had a key registration system, of some sort, which would once the user had typed in the correct key, allow all the features to be used.

Apparently software pirates are very easily able to crack the key system, and either export it to their own program, which then generates valid keys, or to register a version.

So the question I asked myself is why shareware authors use a registration key method ???

I can appreciate that they'd rather not supply complete copied to everyone, because people wouldn't register (for what ever reason).

So why not simply supply a copy of the program with the features full removed ??? not just temporarely dissabled, but completely missing, no code to the stuff there.

This would mean on registration of the program the quthor would instead of sending out a registration code, they would send out the complete program (latest version of ?).

I know this would mean a slightly bigger email, or sending a disk. But surely this would mean less cracked copies going around, and more registrations.

As I see it, it removes the temptation from the pirates, who can't do anything about altering the shareware (demo) version. And instead leaves the piracy in the hands of th user who _paid_ for the copy (I would guess people who paid for their copy might be less likely to dish copies out left right and centre ???).

Anyway thats my idea. If you need to release crippled versions (which I am against btw.) then why not make it a properly crippled version, rather than one which simply needs a key to make it work properly ???

Please remeber that these are some of the same pirates that cracked games software, which had some pretty advanced protection, including scrambled disk formats, multiple codes and encyptions throughout the program etc. - I think most shareware authors would find it difficult to match this sort of encryption.

ATb.

Hi,

>I was wondering if there was a prg that will play .wavs or samples when I
>boot up my STe?

You should use Crazy Sounds. With this _great_ Programm you can do this...

- Crazy Sounds put digital samples on _every_ Systemcall
(for example open/close Window, Bootsequenz, AES-Calls and many more)

- Crazy Sounds read *every* sample
(SMP, AVR, SAM, WAV, IFF... [VOC NOT A REAL SAMPLE!!!])

- Crazy Sounds works on STe/TT/F030. For ST there's a special version.

Crazy Sounds is avaible from Maxon Computer.

>something like 6 ROM chips to provide TOS 1.0 and all later/other ST's
>used a single ROM chip?

6-chip TOS chipsets were used mostly from 1985 to 1987, then the 2-chip sets appeared later in the TOS 1.2 (MegaTOS) life cycle. TOS 1.0 is _only_ available in the 6-chip sets AFAIK. TOS 1.2 and 1.4 (Rainbow TOS) were available either way, though 2-chip TOS 1.2 chipsets seem to be more prevalent than 6-chip. Starting with the STe in 1988 <?>, all production chipsets were two chips, with TOS 1.60 (STe TOS) and possibly some of the 1.62 chips in 28-pin packages. TOS 2.05 (Mega STe TOS) and 2.06 (Universal TOS) were released in 2-chip, 32-pin chipsets and some STes actually required modification of their 28-pin sockets to accommodate TOS 2.05/2.06. TOS 3.05/3.06 were for the TT only and also were 2-chip, 32-pin chipsets. TOS 4.0X (FalconTOS) is in one PLCC chip. I can't seem to remember the relative storage capacities of the chips. I think the 32-pin chipsets were 256K total, and the earlier chipsets 128K, but I can't remember. The Falcon TOS is 512K.

Whew! That should do it.

Dan

BTW, you do _not_ have TOS 1.98, I don't think Atari even used that number in development. I can't think of the bug in the program which would cause that.

Yeah, use the "Print Labels" feature and tell it you want to print three
labels per page. You even have the option of doing columns across, so you
could do three across and three down if you wanted.

Check out your manual for all the details.

>
>Jeff

Assuming you are using ExtenDOS and that the Rom drive is being properly supported (i.e. it's a standard recognized drive), you could try making sure the SCSI IDs are different (though if they were, neither drive would access properly, if the system booted the drives at all), or you could change the order of the drives in the chain. Also, you may not need the terminator. The CD Rom may be internally terminated (then again, my experience shows that Ataris are much more forgiving of termination errors than other platforms), so the external terminator may not be necessary (or it may not be necessary for no good reason).

I have had an experience where a 40 meg 2.5" drive in an external case simply would not work with an NEC 3Xe in the chain in any way, shape, manner, or form. This was because the early Link didn't support parity and the parity couldn't be effectively disabled on the NEC (at least I think that's why it wouldn't work).

Good luck,

Dan

Source record: 139564

The Smooth One <smooth1@panix.com> writes:

>I hope this helps! Let me know what happens.

Well, they gave me a phoney DNS. I resolved the DNS problem (pun not intended)
and got CAB to resolve the host, make the connection.

Now, all I get is "Receive data (0 bytes)". After that, I wait, and wait,
and CAB times out and gives me a blank page.

My provider thinks, that with a static connection, I should have to put the
gateway address in somewhere, but there is no provision for that whatsoever.
All other information is correct, I have gone through it with a fine-toothed
comb with TIAC's excellent tech support. They think that it may be a problem
at their end, since I didn't seem to have a hostname on their machine. I
will call to see if I do, but if it still doesn't work, I will be one
sorry fellow. . . :'/

Thanks,

BR Miller

IIRC according to the press release, only one of Tramiels is on the board
at JTS. They may not be able to 'run JTS into the ground' as you have
proposed. But, then again, who knows?

> and SM124 screen?

Probably, but it would be tough going for a full account, depending
mainly on if you can get away with changing between program and data
disks without confusing whatever code was running. A shell account
would be easier - you'd only need a comms program.

> Q2: If so with what software? I have access to both Demon
> (UK) and CServe as providers - CServe for email
> mainly.
>
>Incidentally I always squeeze more out my floppies with extended formats...

You'd have to to run Nos, the executable with no datafiles (mandatory)
takes about 300K of disk space, and 500 odd minimum of ram. It will
run in 1 meg but I dunno about a single floppy.

>I know its asking a lot but, well I've had my old STF since May 1988
>(new) for MIDI and really never been interested in comms. Now I'm mad
>for it and have been on-line with a little Sharp PC3100 palmtop for
>over a year and am really set up. The worry is that should my palmtop
>develop a fault I've no way to get my mail etc.

You might consider downloading STiK and the associated programs which
use it. Unlike Nos, which is a PC port, the STiK programs are written
specifically for the atari and are not as resource hungry.

>I know these questions are asked frequently but noone talks about a
>floppy only setup on 1Mb... It is really for emergencies/pure
>devilment you understand!

I did try to help a couple of folks in this situation a few months
back. They never said one way or the other if they succeeded. :-(

FROM: SSweet@mettav.demon.co.uk
SUBJ: CM8833-II Monitor REPAIR advise ????

lu> I have a Phillips CM8833-II Monitor that has silently and smokelessly
lu> gone dead.

Does the set give the faint degauss buzz at switch on?.

If youve got a meter then check for 350v across the main smoothing capacitor,
If no 350 then check the 0/1 switch for continuity across each pole pair with
the mains disconnected.

If youve got 350V then you'd best give up at this point if youve no Chopper
PSU experience.

Look for dry joint around the chopper transformer whilst your at it..

lu> The nearest repairers want a minimum 15 ukp just to look at it.

Thats quite cheap actually.

lu> it is the tube that has gone I would sooner look for a second hand
lu> monitor.

No, it aint the tube, the set would be basically 'live' if that was dead.

Where do you live?.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

I like to think that _my_ Falcon is _far_ above ST class! :^)

>1)I just downloaded a updated AHDI driver from umich (ahdi6061.lzh)
>and now I don't know what to do with it! When I uncompress it
>I get the AHDI.PRG. I don't know what I should do with it so when
>I boot it uses the new driver verses the old one!

There should be docs in the archive that tell you how to run everything.
My advice: get HD Driver, it's _way_ better and is still supported. Of
course, it will cost a little money, but in the long run, you'll be loads
happier. I haven't used AHDI since 1988.

>Does anyone know the difference between AHDI 6.04 and 6.06?

Dunno.

>2)Also I downloaded a Cli and I'd like to be able to set a path
>so I can enter the name of a program and run it from anywhere.

You're way better off just using the Falcon desktop to set up F-keys to
run your programs with just a key press.

>3)I also added two SCSI drives and couldn't get them to work.
>I kept getting a SCSI 0 not responding message on boot up!
>
>I changed my drive ID's to 0 and 1 and rebooted and it worked!
>Is this a requirement that drive IDs must be in order starting
>at 0?

Yes, AHDI expects SCSI IDs to start at 0 and go sequentially (1,2,3,4,
etc.) with no gaps. Pitiful, really.

>Also I do not like the way my partitions worked out! I have
>12 drive icons on my screen - 4 partitions for each drive!
>Can I not make any number of partitions I want and make them
>the size I want?

HD Driver should let you partition however you like, but if it doesn't,
you should find an "expert" dialog box or some such in the AHDI package
which will let you set up your partitions as you like.

>I'll stop for now. Sorry for all the questions

You might call Best Electronics in San Jose, California and see if Brad has a spare manual, or if he'd be willing to Xerox one for you. Atari manuals are notoriously useless, but a new user would find some necessary info.

>Thanks in advance for all the advice/info.

HI, I have an installable prg for ahdi6.061.
Do you know how to retrieve a zip file? And also how to get a file through email? Ahdi is freeware so, don't worry.
Normally ahdi should go in your auto folder , first position. But you can install it.
For the partition, sure you can change this. But you'll loose the data on the disk . If you want I can send you my disk tools (zero, format, check bad sector, installation, partition etc.,.)

2997. Special announcement regarding Dr. T's OMEGA and more

Newsgroup: comp.sys.atari.st
Date: 1996-08-21 00:00:00 UTC
From: bat@cyberden.com
Message-ID: <bat-2208960202580001@rpk-9.nbn.com>
Source record: 139575

Well I took it into my hands to track down Dr. T himself and find out what is going on with the sequencer in respects to is it still really available, is there documentation, etc... and the answer seems to be morphing into a positive result. In the next few weeks, steps are being taken for Dr. T to offer OMEGA-II as well as other products he has done for the ST directly from his own web site which should be up soon.

The details of documentation is still undergoing the fine tuning, i.e. either you will have to print it yourself off of disk or he can get you a copy. In either event, there will be NO SUPPORT for this product, just a legitimate source for it.

I was considering making it available myself, but Dr. T. has worked hard on this product and I'm glad I was able to contact him regarding this. If anything, he is entitled to some form of payment for OMEGA II and his other ventures as anyone who has ever used this product can tell you it's far superior then any other sequencer out there of equal value.

Now my next venture is trying to get Macromedia to allow DECK to lock to SPP rather then SMPTE so users of OMEGA can lock DIGITAL AUDIO on the Mac (provided they have one) to OMEGA. An OMEGA wet dream in my book. If this sounds good to you, email me telling me so and I'll forward the requests to Macromedia.

>Never heard of it either, and I thought I knew them all. If you figure
>this out, let the rest of us know!

This is TOS 1.62 :STe TOS without the won't boot in MED REZ bug.

Some analysis programmes failed to correctly deal with the sudden
change of sequence and the odd backdating of tos by atari themselves.

Atari corp started to refer retrospectively to TOS 1.2 as 1.02 etc.
and general confusion ensued.

Anyhow I believe you have 1.62 there (it is an STe isnt it?)

Try a more modern analytical tool ,the one by Offir Gal seemed OK

All the above is of course just my opinion.

From: trondeg@notam.uio.no
Message-ID: <4vetra$srl@due.unit.no>
Source record: 139584

There are several questions that arises now that Dr. T's Music Software don't exist anymore, and there is no more support for the programs. I suggest that we collect some of these questions and mail them to Emile Tobenfeld. If we are lucky maybe he will answer them. His e-mail adress is: emile@farnsworth.mit.edu.

My questions would be:

Dr. T's had a BBS with several files and utilities related to Omega and other Dr. T's programs. I have never seen these files freely available on the Internet. (I have seen some on a pay service.) Would it be possible to get these files somewhere for free?

Would it be possible to release Dr. T's programs and utilities as shareware/PD? There are several programs that I would like to get hold of, like T. Basic, Hitman, Realtime etc. I was lucky enough to get three great MPE programs last year from Dr. T's European support. These are: Tempo Master (very useful), KCS Text (not that useful, but OK) and MIDIAx (the most fun algoritmic program I have seen.) Other programs that Omega users would like to see as shareware are Tunesmith, M, old synth/sampler editors etc.

Would it be possible to get a bug-fixed version of Omega II?

Well lets see.... I think one money hungry scum bag [Bill Gates] is
better than THREE money loving scum bags (Jack, Sam, & Leonard).
Bill Gates at one time being a newbie to computers actually loved the
PC world and was actually an alright person then cam a Billion+
dollars. Jack and the boyz on the other hand, well its
genetics/inbred to screw and move on.

I belive they named a plant after these fellows.

3010. Stik and cab question

Newsgroup: comp.sys.atari.st
Date: 1996-08-21 00:00:00 UTC
From: smooth1@panix.com
Message-ID: <4vf251$4ms@panix2.panix.com>
Source record: 139588

I've been using Stik and Cab, with a 65% success rate, and some web sites bombs out when I go there. I have to shut down everything and start all over. Forget about going back to that site because it will do it again! Is there something I can do? If I hit these sites via shell... no problemo.

Cab question:

I've been trying to get the external program thing down. When I call up a page with graphic, text, etc. Nothing different happens. Are there special programs needed to get this to work or am I useing the wrong extentions and should us html at the end? Does the external program get the graphic info in the html script? If not... what is the purpose of it?

Thanx, in advance, for any and all help on these matter.

I've been logging on to http://sunsite.cnam.fr for the past several days
using Lynx. I'm logging onto my host with STalker and running a VT100
emulation. I've had no troubles with the site, though all I've been doing
is linking into the Atari archives...

3012. General questions

Newsgroup: comp.sys.atari.st

From: Brian Hutchinson <hutch@ena-east.ericsson.se>
Message-ID: <321B0D67.41C67EA6@ena-east.ericsson.se>
Source record: 139590

Hi,

I just got a Falcon and I don't have any manuals. This is my
first ST class machine so I'm having a little trouble getting
up to speed on some things.

1)I just downloaded a updated AHDI driver from umich (ahdi6061.lzh)
and now I don't know what to do with it! When I uncompress it
I get the AHDI.PRG. I don't know what I should do with it so when
I boot it uses the new driver verses the old one!

Does anyone know the difference between AHDI 6.04 and 6.06?

2)Also I downloaded a Cli and I'd like to be able to set a path
so I can enter the name of a program and run it from anywhere.

3)I also added two SCSI drives and couldn't get them to work.
I kept getting a SCSI 0 not responding message on boot up!

I changed my drive ID's to 0 and 1 and rebooted and it worked!
Is this a requirement that drive IDs must be in order starting
at 0?

Also I do not like the way my partitions worked out! I have
12 drive icons on my screen - 4 partitions for each drive!
Can I not make any number of partitions I want and make them
the size I want?

I'll stop for now. Sorry for all the questions

Thanks in advance for all the advice/info.

Brian

Well, you have to remember that the companies are paying them for there
(continued?) loyalty and not the actual work they do. A underpaid CEO can
and will do a lot of damage to a company. This is just the way it is.

Think about the amount of inside knowledge they could/would use for there
own personal gain. Why don't they? They get paid enough not to bother.

j>
j> Where is this solution failing me?

You have to set the SCSI ID on the CD-ROM to a different number than that on your hard drive, Jeff. I would suggest you set it to 7; that leaves zero through six for other devices (and your existing drive is probably zero).

3015. $39 External SCSI CD-ROM drives forsale

Newsgroup: comp.sys.atari.st
Date: 1996-08-21 00:00:00 UTC
From: cameron@solaria.sol.net
Message-ID: <4vgnpk$3vg@solaria.sol.net>
Source record: 139593
Cross-posted to: wi.forsale,wi.madison.forsale,comp.sys.atari.st,comp.sys.atari.st.tech,alt.bbs,alt.bbs.majorbbs,alt.bbs.pcboard,alt.bbs.wildcat,sol.forsale,local.forsale

```
* Refurbished Hitachi CDR-1750S External SCSI CD-ROM drives *
* $39.00 each plus shipping. *
* Buy two or more, $35.00 each plus shipping! *

Compatible with * IBM, clones, * Apple, * Macintosh, * Amiga, and most
other machines using a SCSI interface.

For multiple drive applications that experience much access and
multiple CD access, these are the drives to use. Don't bother with
changers that can't access more than one CD at a time and that have to
swap CD's around constantly. These were the best External CD-ROM drives
ever made and will outlive CD changers. They can NOT be converted to
internal drives, as they are TRUE external units.

Each drive is factory refurbished from Hitachi. Package includes the
drive, standard three-prong power cord, CD-caddy, Manual (printed in
English, German, and French), and a Hitachi warranty card.

Features:
---------
* Advanced access time (320ms average random access time).
* Data Transfer Rate (153.6 - 175.2 kb/sec).
* Large buffer memory for I/O (64KB).
* Right & Left channel audio output RCA jacks.
* 3.5mm headphone jack.
* Interface: SCSI BUS (ANSI X 3.131-1986), 50-pin shielded connector.
* Two 50-pin Centronics style SCSI ports (one "in" and one "out").
* Allows connection of up to seven drives per SCSI interface card.
* You may also run multiple SCSI cards in one computer.
* CD Caddy disc loading system (Caddy included).
* Audio playback circuit incorporated.
* Lens cleaning mechanism.
* Double caddy door for protection against dust.
* Power saving mode, for periods of inactivity.

Dimensions: 13" long, 9" wide, 3" tall.

Front panel options/features: headphone jack, volume control, busy LED,
disc LED, power LED, eject button, and power on/off switch.

Rear panel options/features: dual 50-pin Centronics style SCSI ports in/out,
Right and Left channel audio output RCA jacks, function switches, standard
3-pin power connector.
```

Function Switch Options:
----
* SCSI-ID: 0-7
* Parity Checking: on/off
* Terminator: on/off

* Software for your SCSI controller is *REQUIRED* for almost all
* applications, and is not provided with the drives. Please verify that
* your SCSI controller manufacturer has drivers available *before* you
* order a drive! These are 1x speed drives.
* SCSI cables also available (not included).

Terms: Pre-payment with money order or certified check, or C.O.D. Drives
will be shipped via UPS ground, unless otherwise requested by purchaser.
Each drive weighs 12lbs. Shipping costs $5.00 to $9.00 depending on area.
Add an additional $5.00 for C.O.D. For exact shipping charges, send e-mail
with your UPS shipping address and zip code. Will provide voice phone
number upon request.

Didn't you guys ever hear that imitation is the sincerest form of flattery! He could have copied any page on the web! He picked Tony's, that meant he obviously thought it was the BEST! When it comes time that I want to sacrifice some of my workspace for a homepage, I'll probably end up copying bits and pieces from many peoples homepages! Though I don't think I'll just go ahead and copy someones whole, mainly because I don't think that anyone else has the exact same interests as me!

The STiK/CAB package available from just about anywhere will do the
trick

>Incidentally I always squeeze more out my floppies with extended formats...

Nice, but don't forget that things get unstable if you go too big, I
like 2/10/80 and have never had any trouble :)

>I know its asking a lot but, well I've had my old STF since May 1988 (new) for

Its not asking a lot at all,

>I know these questions are asked frequently but noone talks about a floppy only
>setup on 1Mb... It is really for emergencies/pure devilment you understand!

Well I argued this point with everyone, all the magazines where going
on about 2+ megs and a hard drive etc, this must surely have put a lot
of bog standard set up owners off, to have the above certainly helps
and makes life easier but.....

I used a one meg STFM with one disk drive,

I used STiK to log into my account,

CAB to Browse the web, you can use low rez and get 16 colours, a good
web page will automatically format its page to your screen size, so
reading files shouldnt be a problem, just pictures may need scrolling
to view,

I used the IRC program that comes with STik, this is fully functional
allowing dcc, mutli channels etc,

I used the ftp program to update the web page I was running on the above system ? :)))

I could telnet as well,

Since then I believe ANTMAIL etc has appeared for your email, I had access to a shell account at the time so could easilly get my mail and news, but I believe its possible now anyway,

So a big YES YES YES your set up is ample to do everything on the internet :)))
The software is easilly found anywhere that has anything to do with ATARI, it is also very cheap to register, well it was when I registered mine, but that was ages ago, I use a pc for net access now, but like you point out...at least i know i have a back up :)))))

Cheers.............!ynoT

Meanwhile, our jobs go overseas because (we) stupid Americans continue to buy imported goods "because they're cheaper". Ultimately, these companies will go down the drain because no one here, in the largest consumer nation on the planet, will have the discretionary income (i.e. job) to buy their products and the nearly slave labor they have in emerging countries will not be earning enough to buy the products either. I'm a Republican, and to me that means making sure we don't get taken advantage of by other countries' trade practices just to let a few at the top make _way_ too much money. Japan flat doesn't allow us to compete in certain markets, and China uses prison labor to undercut American wages and we do nothing. (Of course, I personally support prison labor, but only for domestic products.)

These "ivory tower" idiots don't seem to see the long term ramifications of their actions. "Let them eat cake" seems to be their motto. They need to remember that we have an armed populace and that when people snap, they will care as much about right and wrong as these crooked CEOs who sell out America for their own short term gain. And it _is_ short term, because the currency will ultimate collapse if the lower class can't get a job.

Just my thoughts,

Dan

What you need Stuart is to FTP from ftp.demon.co.uk/pub/docs/ a file I think titled 'kaq9.txt' or something which contains all the commands for NOS. There dosen't seem to be a definitive doc on all the commands relating to NOS as some of the commands in the txt file don't work, IE to move up one subdirectory one has to enter cdup followed by the directory, and not as stated, cd. Also the command mput does not work, there may well be others. Anyway take a look in /pub/docs/ and see if there is what you want in there. Hope this helps.

From: m9174@abc.se
Message-ID: <4vg0kk$86s@atle.abc.se>
Source record: 139604

I have just upgraded my Cubase to the latest Cubase Audio Falcon.
Everything works just fine, except for one thing... I can't hear the
metronome any longer!!

Please... if you got any ideas, _please_ let me know.

Email: Carl.Lofgren@abc.se

Yes, it's sad sometimes, I admit. We're working on it, though! <g>
The "plus" side is that many Atari users also use PCs, so the PC content
is usually noteworthy for them. Me, I skim right on past it! <g>

phil4@phil4.demon.co.uk (Phil Hough) said:-

>I'm not sure but IIRC the SC1224 and Philip's 8833Mk2 were the same
>monitor, but with different cases ??

I'm not sure that's true for all SC1224's. Mine bears very little
resemblance to the 8833 and has no inputs apart from the 13pin DIN
plug. It is an anologue RGB monitor with seperate H and V sync inputs
and would require quite a fancy adaptor to accept composite video.
It's been on my projects to do list for some years now ;-)

>There is no way to plug a none modulated Atari (or any computer) into
>an antenna _only_ TV, unless you can buy/find/make a modulator
>(external probably).

External modulators were at one time available for ST's (in the old ST
and STF days). Maplin Electronics produce a couple of suitable
modulators in the UK (PAL) and I'm sure Radio Shack (or whoever) can
supply NTSC versions for the States, cost should be less than 20ukp
(30usd).

Fun eh? Gaz.

[Gluestik]
>>>http://www.cs.duke.edu/~dsb/files/gluestik_beta1.zoo

Why can't files be uploaded in more "standard" formats like .ZIP?
That way they'll work fine with downloads in whichever browser people are using (I've had problems with "Lynx" when downloading certain files- they download as text files...).

3033. Animation software?

Newsgroup: comp.sys.atari.st
Date: 1996-08-21 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GHVHBAWAUp@tos.ak.planet.gen.nz>
Source record: 139656

I am looking for software for TT030 or Falcon030 which will allow me to manipulate animations.

Mainly, I would like it to display multiple frames of the animation in miniature form on screen so that I can easily select groups and shuffle them around before creating the final animation file.

It should also read multiple single-frame images (preferably in targa format) and through the above mentioned process create and animation from them.

At worst, it could simply load a series of GIF files (must be GIF in this case) and let me shuffle them round as mentioned above, then output a list of what order they should be in. Then I can make an animation of them separately with another program.

Of course it would be better still if it had extra functions such as fades between two animation sources, overlaying multiple animation sources etc.

Any suggestions will be much appreciated.

a> signals
a> many MiNT funnctions
a> VFAT
a> long partitions

Ok. Has anything been done wrt support-programs like Applicat? Especially fixing the way that it grabs memory and doesn't release it after quitting? (on a 68000 machine, btw). This is a significant problem and is the cause of the majority of my reboots. My other main problem is with NVDI4's replacement for SHUTDOWN in the graphics card version.

a> Therefore I had not enough time to improve Magxdesk significantly.
a> Unfortunately MagicAtari, MagicMac and MagicPC all are shipped with
a> Ease and only very few persons use Magxdesk.

On a 4Mb machine I wouldn't dare use any other desktop - not enough RAM to run programs. I often run out of RAM...

3035. How to add samples for use in "Connect"?

Newsgroup: comp.sys.atari.st
Date: 1996-08-22 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <321c9cc21183dbb@sn.no>
Source record: 139458

Has anyone here successfully inserted sound samples into the terminal
emulator "Connect"? (different sound samples can be used for the different
alert messages).

Well, I've got a few samples I'd like to use, but somehow they don't come
out right when I try them in "Connect". They sound just fine when I use
them in "Soundlab". Strange...
Could it be that Soundlab's sample format isn't fully compatible with
Connect's format? I use .SND samples.
I don't have any other usable sample editor- any suggestions?
(I use a TOS 2.06 based STe with 4Mbytes RAM).

That I don't recall, but there's a small AUTO-folder program someone sent me called FMC (Force Media Change) which forces TOS to re-read the FAT every time you access the disk. It works very nicely - need it?

Message-ID: <4vi1l4$1mg_003@jf.intel.com>
Source record: 139461
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

I've been looking around to find servers that carry out alt.binaries groups, and have found several read-only servers. Last night I managed to find a "posting OK" server as well. There's a Web site that will give you a list of existing "free nntp" servers at

http://dana.ucc.nau.edu/~jwa/

I attached to peacenjoy.mikom.csir.co.za and found the desired groups and got the "posting OK" message that I was so desirous of.

I had the same problem, this should only happen with posting not
recieving. You may be aware that Oasis makes dodgy headers concerning
the GROUP argument, the RFC states that it should still work OK but
Zippo isn't completely compliant, just use Demon's instead, it's slow
at times but recently it's been flying for me at over 1000cps.

3042. NEW Atari User

Newsgroup: comp.sys.atari.st
Date: 1996-08-22 00:00:00 UTC
From: oscar@justified.com
Message-ID: <MPLANET.321d4daeoscar989760@client1.news.psi.net>
Source record: 139465

Hi there -

My brother has been bitten by the Atari bug and I was thinking of getting him started with a nice machine. I personally never used anything past the orignal ST machines (though I still have my 8bit...), so I'm trying to educate myself on exactly what's available these days in the world of Atari computers.

I was thinking of getting him a Falcon machine. Any comments? My main concern is being able to use a standard SCSI hard drive and CD-ROM reader. How much memory should it have, and can I use PC-type SIMMs? What's the maximum baud rate on the serial port? Where's the best place to buy one of these?

He's going to be using it mainly for school work and accessing the internet. What TCPIP connectivity software is available? What's the best web browser / email client / news reader?

I've been desperately looking for a central FAQ for this newsgroup without any luck. If all of these sorts of things are answered in a FAQ, please direct me to it.

Thanks,
Oscar

3043. Web Resource Updated

Newsgroup: comp.sys.atari.st

From: szhays@rocky.ucdavis.edu
Message-ID: <4vimgs$8@mark.ucdavis.edu>
Source record: 139466

The Yolo Atari Club web pages have finally been updated! After almost a year of constant updating, it has been over six months since the last update. But now they're being regularly finely tuned once again.

In case you haven't visited before, the YAC pages maintain well organized links to most every web page of interest to owners of TOS based computers. If we don't link to a TOS page you know, send me e-mail! We will! My Internet Service Provider swears the page gets over 6,000 hits a month (we used to get even more when we were updating regularly), so we must be doing something right.

The latest update looks best with the latest browsers, including CAB 1.3 (and the other guys', versions 3.0). To get there, point your browser at:

3044. TOS 1.4 British; where's the backslash?

Newsgroup: comp.sys.atari.st
Date: 1996-08-22 00:00:00 UTC
From: cj439@FreeNet.Carleton.CA
Message-ID: <4vion8$fd@freenet-news.carleton.ca>
Source record: 139467

I had TOS 1.4 in 6 chips, and a fellow in Australia had 2 chips, so we swapped. Fine, so far. But his chips are British configuration, and where my North American keyboard has a backslash, on the new TOS, I get a "#". This makes it very difficult (read;impossible) to enter directory paths! Where do you Brits find a backslash? I'll trade you a pound symbol for a backslash! (it's not on this machine)

I used to use connct, and yes I got smpled sound first time no
problem, :) actually quite a good effect :)

Would suggest you try SIGN/UNSIGN

I used samples in SAM format, the nearest to that on your list, is
WAV, Well thats as far as I know ??

Anyway point is that ConNect plays them alriught, so its your
samples?

Dunno if that helps

What's the first line in your NNTP.DAT file look like?
And what do you have entered in STARTUP.NOS for nntp server?
It sounds as if you have no news server listed in STARTUP.NOS

t> Thanks and for me to see your reply you will have to send it via E-
t> Mail!!!

AFAIK then NOS will only attempt to download all mail when it has no "nntp
groups xxx" setting in STARTUP.NOS _and_ it can't find NNTP.DAT.

Make sure you've got NOS looking in the right place by doing (eg):
"nntp dir d:\oasis\spool\articles d:\oasis\spool\news"
_In_ Startup.nos.

ATB,
Karl.

3050. Save those Atari machines

Newsgroup: comp.sys.atari.st
Date: 1996-08-22 00:00:00 UTC
From: Ron Pothier <falken@cyberg8t.com>
Message-ID: <321CE7F1.66D3@cyberg8t.com>
Source record: 139473

Since Atari Corporation is no longer in existence, I am willing to bet that the computers and other stuff bearing the Atari trademark will fast become a collectors item in the computer world. If you want to make some real money on your old hardware, now is the time to store it for a later resale. Assuming, of course the stuff you are not currently using.

Yes, George [george@jmg.on.ca] wrote it and David [david@jmg.on.ca]flogged
it :^)
I bought a copy at ACE'92 in Toronto, but they stopped flogging it shortly
after. Still sell some Atari syuff I think.

3052. 520ST--- Worth the trouble?

Newsgroup: comp.sys.atari.st

Source record: 139522

Hi people :)

OK, I'll admit it. I'm desperate !!

Does anyone know whether there's a version of the Spectrum emulator for Atari machines that can load 128k Z80 files ?

I've got Hypersports and Starglider as 128k Z80 and I'm dying to play 'em but the Z80 to SNApshot converter I've got won't work on 128k files :(((

Any of you kind souls out there in Fujiland care to share your wisdom with me ?

Thanks

Paz.

Dan,

I'm using X_Mon as a driver. I've tried disengaging all auto progs, but
no change. (Yes it's an ST)

I've got an AdSpeed Accelerator on board, but it's not in the Auto Folder.
I use it's ACC if I want it. So, that shouldn't be the problem, unless
the Adspeed chip is conflicting with the Moniterm board.(?) Do you know
what kind of hardware patch would be necessary?

I've looked in the CompuServe libraries for other Moniterm related
drivers, but they don't seem to work.

ps: The guy I bought the Moniterm from said that it had a bad power
supply. It seems to work fine except for this glitch. Doesn't sound like
a power supply problem does it?

Doesn't sound like a power supply issue, but the hardware fix may be
necessary, and unless there's a number in that driver, it's not the
latest. You might try Umich or Genie for more infe. Jim Allen of T25 fame
worked up the hardware patch. It involved a pull-up resistor on some of
the pins on the header of the Moniterm board, as I recall.

: decision very soon, please reply me through email. Thanks.

: Regards,

Thank you very much for those who emailed me. I have just got the SyQuest working with my ST! I am using ICD Link, ICDFMT somtimes reports error $19 after formating the HD? After the HD is formated, it reports a total number of 2031878 sectors? I am pretty sure the HD is a 44MB removable and it shouldn't has so many sectors. Any idea? I am just ignoring it and using 2 22MB partitions now. BTW, I have got a Spectre 128 and a MAC system disk (MFS format). Is there anyone who can tell me how to get the system into spectre format? I tried formating disks using Spectre, DC-Format and MacAtari. The closest one is MacAtari which does not give me any error when used it in a real MAC, however it seems that spectre does not recongise it since I cannot read it under the spectre menu (disk copy).

Best Regards,

William

There are thousands in the ftp archives (atari.archive.umich.edu and ftp.toad.net). Not only can NeoDesk read icons stored in NIC format, but also color icons stored in a .RSC file, and even Windoze .BMP and .ICO files.

It's probably safe to say that this brings the total number available to well over a million (which is not to say a lot of those aren't duplicates <grin>).

Yes, it will work, no, no QWK support (directly). Using FidoDoor and
ST-QWK, you could do it, but I don't know how well that would work in only
1 meg of RAM.

Which driver are you using? The original driver is nowhere near as good as as the latest version of a driver which I believe was written by an independant party, something-or-other 2.3. Also, you have to be pretty careful about the auto prg order. Does the mouse hang if you only use the monitor driver and no other auto boots or accessories?

Dan

And of course I'm assuming you are using it on a Mega ST. If you have an accelerator in your machine, you may need to do a small hardware patch on the Moniterm card to stabilize the system.

This program was geared and still is geared to being able to be run on a 260ST with a single sided drive. It does, however, still work perfectly on my Falcon with 8 MB of RAM running in a) MultiTOS and b) MagiC. As for .QWK usage, no, it doesn't (at least not yet, and probably not at all). I am working on giving it internet newsgroup access though. (or at least, I will be once I have switched the code to ANSI from K&R C)

: Would this BBS work on a stock 1040ST with tos 1.4? Does it have QWK
: useage?

I did a readthrough of the source code awhile ago, but didn't print it out. It runs on most STs out there quite well, from what I've seen. I may go ahead and compile it to see how it runs, just to learn about the code. I'm currently writing a Top Ten program in C for the Transcendence BBS, and I could convert it for other BBS programs if I'm given the right files and so on.

I've not seen anything in there related to QWK packet usage.

I have managed to shift most of my ST gear, but I still have the
following if anyone is interested:

Fontkit Plus 3.4 ï¿½4
2 HP Deskjet cartridges ï¿½11 each
Box 10 3M DSDD disks ï¿½4

Postage is included in these prices.

I also have a 520STFM with TOS 1.4 and 2.5MB memory. Any offers?

I used Teradesk for a few years, and it was a great program. I especially liked the text viewer bit. I've now invested in Thing which is excellent, and probably IMO as good as the much more expensive Ease desktop.

There is a later version of Teradesk than 1.36, it's on a CD I have, but IIRC, I had some problems with it, and went back to 1.36.

ATARI COMPUTING - the new printed Atari magazine
****
Just a quick update on how things are going at AC Towers.

We've now sold all the space devoted to advertising in the first issue,
plus many firms have booked for future issues.

Most of the major UK Atari vendors are supporting us, which in anyone's
books, is a mega sign of confidence in both us and the future of TOS
machines.

Editorially we have some marvellous stuff lined-up, with various exclusive
articles, plus all the usual bits and bobs that go to make up a good
magazine!

As previously mentioned in our press release, we are launching the magazine
at the Atari Shows in September at Birmingham and London. And we hope to
meet a very large number of our readers at these shows! By coming to the
shows you will be amongst the first to be able to see and buy a copy of the
magazine.

We are now taking subscription payments, and if anyone wants further
details, please email us.

Best wishes
Mike Kerslake - publisher

3089. STiK Problems driving me BaTTy!

Newsgroup: comp.sys.atari.st
Date: 1996-08-22 00:00:00 UTC
From: Brian-Roland Miller <brimiller@delphi.com>
Message-ID: <JTLzx1i.brimiller@delphi.com>
Source record: 139556

OK, here is the latest problem in the eternal STiK struggle:

In the beginning, there was TOS. And the Lord saw that TOS was good. When seeing this, He said "Let there be STiK." And thus, STiK was. But the Lord saw that STiK wasn't quite as good.
-
Basically, I signed up with TIAC (The Internet Access Co.) of Bedford, MA for a SLIP account.
-
Logged on, with all information presumably correct. Could not resolve host names anywhere.
-
Found that DNS was phoney, got correct DNS.
-
Now able to resolve hosts, but could not receive data. CAB would resolve, then "Receive Data (0 bytes)" and time out, giving me a blank screen.
-
Was told by a fellow TOSer (my eternal gratitude to him) to check to see if "VC" was on, if so, switch it OFF.
-
Called TIAC, was told that VC was on - that my connection was CSLIP. This was AFTER I told the guy I wanted SLIP - NOT CSLIP. I only repeated it 300 times.
-
Logged on after VC was switched off. Same problem - I'm not getting data. I can see that the host is sending packets, I am just not receiving them. My modem shows data being received, but CAB isn't registering it.
-
I have used other providers without a hitch, spent 15 minutes setting up the config file, logged on and had no problem.
-
What am I or TIAC doing wrong? Are TCP settings to blame? I was told to change MTU to 1006 and MSS to 960.
-
Please, I am at my wits' end. I purchased this account for my business, and so far, it has been less than useless. HELP!

I don't use Connect, but you may want to try saving the files as othe types with Soundlab - it supports SND, AVR, WAV, and a couple of other formats, and the "high bit" can be either on or off as well, so you have at least 6 different formats you can try. What does Connect's doc tel you to use?

High bit ON sounds pretty awful, right.

I have discovered that some WAV files have a bogus header block, also - if it will play OK in Win95 but it sounds bad in Win3.1, it probably has the new Sin95 header block, which causes either total failure or awful distortion in all other systems. Soundlab can read those OK, though, and you can change the sample speed (or not) and resave the WAV to get "proper" header blocks.

Frankly, I am unsure of the proper format for .SND files - guess we need to look at the tech docs for Soundlab, I'm pretty sure Damien gives that info in there someplace.

If money is no object, and you want to make life simple, get a Falcon from Toad or Computer Direct (or your chocie of vendors) with the C-Lab lable on it - that will already have all the hardware patches installed. Also get one with internal IDE drive (85 megs, enough for a good start) and go with the 14 (16) Meg RAM machine from the start; else you have to get a third-party RAM board and fit it yourself. It's a PITA, though a bit cheaper. Be sure to get the VGA monitor connector block; then you can use any S/VGA monitor with no problems.

WWW131 is a complete (less newsreader) Internet access package; requires uncompressed SLIP but the dialer is being reworked even as we speak so as to support other protocols.

Oasis 1.35 will give you a UUCP connection for news and email.

Oasis 2.0x is similar to 1.35 but with a new NOS called ICE, and reworked user interface.

There are also multitasking OSes available; MiNT is free, MultiTOS is MiNT as officially supported (previously) by Atari; Magic is simply wonderful. I don't know if it will work on the Falocn yet, however. GEMini is also available but I've never actually seen it.

Most of the info you need can be found starting at
http://www.3rdplanet.com/~starship/atari.htm

Good luck!

Congratulations

> so I'm trying to educate myself on
> exactly what's available these days in the world of Atari
> computers.

Tere is the Falcon now built by C-Lab in Germany, the Medusa T40/T60 and the Hades from Medusa Computer Systems in Switzerland and the Direct T40/T60 from Computer Direct. You can also buy used Atari Falcon, TT and STE Computer.

> I was thinking of getting him a Falcon machine.

This Computer is best for Sound Processing. In other Applications his Power can not really be used, and so it becomes comparably slow.

> My main concern is being able to use a standard SCSI hard drive
> and CD-ROM reader.

All ther alternatives I listed above (I'm not shure about the STE, but all the others) have a SCSI Port. So you can use Standard SCSI Hardware with these Computers.

> How much memory should it have, and can I
> use PC-type SIMMs?

4MB are good for most puruses. If you use memory intensive Applications any size is to few. My Brother just upgraded his TT to 20MB and still found out, that his Grafic Processing Program starts to swap. My Father on the other Hand still uses my olt 1MB ST for word Processing and never had any Problems with the Memory. I myself have Problems with the 4MB in my Falcon, but I try to set up a most flexible and huge Unix setup based on MiNT on it. so after I log in and start an AES I have around 200-400KB free. This is definately not enough to start X11 as well...

> What's the maximum baud rate on the serial
> port?

I don't exactly know the Number, but TT, Falcon and the clones al reach the same Baud Rate.

> Where's the best place to buy one of these?

I don't know where you are. In US it is Toad. In Germany the Medusa Computers are sold by carasys in Saarbruecken and MW near Bonn, the Falcon can be bought directly from C-Lab. an still almost any Shop can get one of those if you ask for them (A friend of mine got a Computer shop and I asked him to get a Hades.)

> He's going to be using it mainly for school work and accessing
> the internet.

even a ST can do that...

> What TCPIP connectivity software is available?

mainly STIK and MiNTNet. STIK needs less Memory and also runns with single tasking TOS. MiNTNet needs MiNT but allows to compile loads of Unix Programs on it. Many of them are available as Binaries. The most outstanding Example is X11R5, but also WWW Server and stuff like that is available. If Memory is no Problem I would suggest MiNTNet.

> What's the best web browser

CAB

> email client

They say AntMail is good. Still elm does tha job as well (but less comfortable)

If it's unmodified, you have 1 meg of RAM. Find a 720k disk and pop it in; it should boot to the desktop (all green with a white border, 2 floppy icons and a trash can, and some menu items along the top). If not, there's a problem, possibly loose chips, but we'll deal with that if it comes up.

For software: Assuming you have TOS-in-ROM (which is normal), all you need are applications. What do you want to do with it? Obviously you have news access with another machine; if you have WWW access as well, got yo http://www.filez.com, click on "Atari", type in a partial filename (make something up that relates to what you want to do, like "music") and hit search. You'll certainly want STzip soon, although with a single floppy drive, you may prefer to use the "other" computer to unzip files.

General references can be found through my Atari bookmarks page - see below.

Yup- been there done that. I guess this is what's called "high bit" in Soundlab. Anyway, turning it on (I think) makes the sound terrible in Soundlab (sounds distorted and very loud), but it comes out fine in Connect.
The problem however is that the sound plays at a much lower rate than in Soundlab. Strange... I've even tried to convert them to other sample rates with no better luck.

> I used samples in SAM format, the nearest to that on your list, is
>WAV, Well thats as far as I know ??

samples in the .SAM format for use in Connect? Did that work? I thought it only took .MOD and .SND files.

> Anyway point is that ConNect plays them alriught, so its your
>samples?

Well, I did my own samples using an external sampler (Yamaha TX16W in case you were wondering). It puzzles me why they come out right in the editor "Soundlab" and not in "Connect". Any ideas?

From: bat@cyberden.com
Message-ID: <bat-2308962309430001@rpk-18.nbn.com>
Source record: 139366

Didn't you get my previous posting regarding this quite a few days ago?
If not, here it it again.

I talked to Emile a few days ago as well as Dr. T's. Because of this, I was able to get them talking (briefly) again, long enough for Dr. T's to officially release the copyright of Omega to Emile.

From here, Emile is working on his web site and a way to allow him to re-release Omega either with a manual or with the manual on disk for those who wish to purchase it at a substancially reduced rate as there is no Tech Support.

As for the utilities, I will check with him on that but best bet is to just search the web. I am writing a special MIDI HELL section on The CyberDen which will be FILLED with thousands of MIDI programs, patches, sampler dumps, etc.. which may have them there. (It will be in the Carousel section soon on The CyberDen @ http://www.hallucinet.com/cyberden).

I do know that MIDIAx will also be available from Emile soon.

As far as a bug fix - Doubtful. Emile just doesn't want to "go there"... at least not now.

>account I can't use! I've been trying since December, if that gives you
>an idea of what kind of frustration this has been!

Well, I changed my account to a new company that had SLIP on their menu
only to find out that they had SLIP on their menu, but it hadn't been
available for a long time...so I had the same problem...STIK connects
perfectly no problem--but CAB shows a 0 6ownload of the page and then
finally ends up with a blank, grey page...So my one and only hope is
that somebody realizes that that they are a lot of would-be CAB and
STIK uses out their who can't use these programs until PPP is fully
implemented...I know I'm not going to register until I can use it--but
once I can I'll be glad too!!! Please, somebody! Give us PPP and keep
us off PC's!!! <grin>

STiK does not need any gateway entry, because _all_ outgoing traffic goes
to the one port now. But this will be different in later versions.

> All other information is correct, I have gone through it with a fine-toothed

Have you tried a WWW-PROXY ? If you got a corresponding entry in
DEFAULT.CFG it might be also worth to try to throw it out.

There aren't many people who never succeeded getting STiK to work.

Cheers Peter

FOR SALE:

MegaSTE - 4MB RAM, 1.44MB floppy drive, co-processor $335.00
NOVA VME 16M graphics card for MSTE / TT $215.00
Quantum 525MB internal SCSII Hard Drive $125.00
NEC-3D Multisync Monitor $200.00
BOCA 14.4Kbps external FAX/Modem $ 65.00
1.44MB external floppy drive in SF314 case $ 45.00

Total: $985.00

S P E C I A L P A C K A G E D E A L P R I C E: $775.00

I also have the switchbox for enabling the NEC-3D to run in all 3 ST resolutions plus the NOVA rez's with just the flip of a switch.

I've put a great deal of thought into these prices. I believe them to be very competitive, therefore they are FIRM. Please note, however, that shipping in the Continental U.S. is INCLUDED in the above prices. Also, if a package deal was to be made of only several of the above items, an added discount may then be considered. :) COD costs are to be covered by the buyer (I would prefer a Money Order or personal check in advance). Finally, I can't really let any of the above go separately until the MSTE has been sold itself.

Other Stuff FOR SALE:

SC1224 color monitor $ 65.00
SM124 mono monitor $ 50.00
Supra 14.4Kbps external FAX/Modem $ 70.00
Spectre GCR w/ 128K ROMs $ 80.00
Migraph Hand Scanner w/Tray and OCR Software $100.00
mystery 1MB 520ST (DOESN'T RUN): $ 50.00???

Source record: 139370

I thought I was so smart! I swapped 6 chip TOS for 2 chip TOS 1.4, and installed it on my 2.5 Meg STf. Then I found that the British TOS doesn't have a backslash, and then I found out that Calamus 1.09n won't run on this TOS! It runs fine on TOS 1.0, TOS 1.2, TOS 1.06.

Has anyone else had this problem? Is it because it's 1.4, or because it's British TOS?

Oi! I think you're right! K Ellis (in France?) sent me this hint,
regarding the remapping prog. you mentioned.

Date: Thu Aug 22 22:02:29 1996
From: kellis@primenet.com ("K. Ellis")
Subject: Re: TOS 1.4 British; where's the backslash?
To: cj439@freenet.carleton.ca (Robert Wills)

Get keyedit. I believe it is at Hensa.
Not sure. You can redefine the whole keyboard as you want. This prg
create a little Auto prg that remap the keyboard.
I use it on the falcon and my megaste.
Bye..

Ok, you can use SCSI hard drives and CD-Rom drives on a Falcon without
any special adapters. You will need a driver for the CD-Rom such as
ExtenDOS Pro.

The least you should consider is 4 Meg and there is a board that can take
SIMM chips that they sell called Wizztronics. You can get all this stuff
and more at Toad Computers.

Contact: http://www.toad.net

> He's going to be using it mainly for school work and accessing
> the internet. What TCPIP connectivity software is available?
> What's the best web browser / email client / news reader?

There's a package that has everthing for using the Internet. It has the
STiCK accessory which is like Winsockets, CAB browser, telnet, IRC, and
all that. One thing though, it only uses SLIP and not PPP or even
CSLIP. Ask the provider about this. Of course shell accounts and
terminal programs can also work.

Hope this helps...

I had similar problems at the beginning and finally traced it to the
provider - many "techies" don't realize that CSLIP is not plain SLIP; the
ISP /must/ turn off the VC or UC flag for your account, else you'llb e able
to get connected, but get zero bytes of data because STIK can't uncompress
the data it receives.

50k is fine; 500k is marginal. Anything larger should be announced at least 48 hours in advance for users who don't want to see the file; or you could announce the Message-ID if you're using a UUCP connection (such as NOS) and let people add it to their HISTORY file or killfile to make sure they don't get a very large message.

```
-----BEGIN PGP SIGNED MESSAGE-----

I wondering whether to purchase a copy of Imagecopy4.

I have use gemview and speed of light on my 4 meg STE with mono & color
monitor. I was wondering if there is a demo version of imagecopy4 that I
could try before registering with one of the other viewers.

Is Imagecopy any faster at loading jpg's, it can take some time with the
programs I have tried, but the results are very good.

I do like the sound of imagecopy4 but I would appreciate any comments on
it's use.

Can I view jpg's on my color monitor as well as with SOL ot Gemview?

What is the best program for picture viewing (jpg) on the STE?

All replies appreciated

In article <hNLwZ0s.graphic@delphi.com>
graphic@delphi.com said:-

>I have been offered an SLM804 laser printer for under $ 100 from a guy
>who bought the remaining stock from an Atari dealer who went belly up
>(who'd have thought...).
<g>

>Are print engine drums and toner cartridges likely to remain available?

If you can find a source... then they are likely to be able to find
more for you. However sources are probably few and far between.

>What are the streetprices of these items?

As I recall the drums were quiet expensive at about 100UKP each (I
think 200US$).

I'm not sure about toner... probably similar price to other laser
printer toner cartridges.

>Where are print drivers available?

This depends on the atari software you intend to use with it. Its
quiet an old printer, rather like the DJ500, and as a consequence,
most programs, even the earlier ones support the printer.

Hope this is of at least _some_ sort of help

ATb.

3125. Atari STuff for sale

Newsgroup: comp.sys.atari.st
Date: 1996-08-23 00:00:00 UTC
From: wdhaas@whale.st.usm.edu
Message-ID: <4vj7a6$gmi@thorn.cc.usm.edu>
Source record: 139477
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.other

Atari stuff for sale. New lower prices on the hardware.

All prices include shipping. Will reduce the price if you take large
quantities of stuff. I will say this again, these prices include
shipping. If you by multiple things I will reduce the price significantly
because I wont have to pay as much shipping and the bigger the orders,
the fewer I have to deal with. (:

(If you think any of the prices are outragious, make an offer.)

Hardware:

1040 STf (w/ TOS 1.4 installed and the TOS 1.0 chips) $90
1040 STE (upgraded to 4 Megs) $150

SC1224 color monitor $75
SC1224 color monitor $75
SC124 b/w monitor $60

Omniswitch $25

SLM 804 Atari Laser Printer $125

SH204 (20 meg harddrive) $40
(It works. You could use the controller and box and replace the disk)

Toadfile 129X (85 meg harddrive, 44 meg Syquest, clock card)
with 8 syquest disks $300

SF314 (External Floppy Drive) $30
SF314 (External Floppy Drive) $30

Spectre GCR w/ ROMs $110

or take all the hardware ($1110) for $800 shipped and sell the pieces
you don't want.

Games: (All in original boxes with docs)
(Buy a bunch and every fifth one (sorted by cost of course) is free.)
(Or take it all ($597) for $425)

Pirates of the Barbary Coast $3
Astaroth $8
Dragon's Breath $8
Full Metal Planet $10
Sherman M4 $10

Tower Toppler $6
Fire Zone $10
Universal Military Simulator $10
Castle Warrior $6
Battlehawks 1942 $10
Archipelagos $6
The Quest for the Timebird $10
Heroes of the Lance $10
Windwalker $10
Deathbringer $10
Star Trek: The Rebel Universe $10
Road Raider $10
Manhatten Dealers $6
Barbarian/CrazyCars/EnduroRacer/Wizball/Rampage 5-pac $12
Harrier Strike Mission $8
Space Harrier $6
Death Sword (same as barbarian)/Barbarian II $12
Alien Fires $6
Drakkhen $10
Super Huey $7
Rocket Ranger $10
Hero's Quest $10
Global Commander $5
Roadwar 2000/Roadwar Europa $12
Championship Wrestling $5
TechnoCop $10
Star Raiders $6
Dungeon Master $10
Eye of Horus $10
Hostage $8
Shadowgate $10
Falcon / Operation Counterstrike $12
BattleMaster $10
BattleChess $5
ArticFox $10
Warship $10
Elite $8
Sundog $10
Obliterator $10
ChronoQuest $10
Star Fleet I $10
Flight Simulator II $10
Brataccas $5
Skyfox $10
Plutos $6
Xevious $6
Hacker/Hacker II $12
Double Dragon $6
Airball $6
Adventure/Eliza/Life/PONG 4 pac $10

Nine Princes in Amber $10
War in Middle Earth $10
Legend of the Sword $6
Zak and the Alien Mindbenders $10
Leather Goddess of Phobos (you can still scratch&sniff) $10
A Mind forever Voyaging $10
Wishbringer $10
Enchanter $10
Cutthroats $10

Games: (With docs but the box is lost)

Road Raider $10
Menace $6
Batman: The Caped Crusader $6
Barbarian $6
Zany Golf $6

Misc:

Maps & Legends: The Cartographer
with Datamap Collections I & II $15

CAD 3D 1.0
& Cyber Studio (CAD 3D 2.0)
& CAD 3D Plotter & Printer Drivers
& Cartoon Design Disk
& Future Design Disk
& Cyber Paint $30

ST Sound Digitizer (hardware) $20

Quartet (music software) $10
Print Master Art Gallery I $5
AEGIS Animator $10

Large box of Documentation $40
(2 Developer kits, a few books, random GEM docs)

Xerox box of Atari magazines w/ disks $35
(All but 3 or 4 Starts, about 10 Compute's Atari ST)

WordWriter ST $4
Thunder (spell checking DA) $5
Flash 1.6 $5
ST Chat $3
ST Talk $3

Mark Williams C ver 3.0.9 w/ manuals and CSD (debugger) $25
MCC Pascal $10
Modula II $6

Quick ST 2.2 $5

Metal Monitor stand (fits over the ST) $8

King James Bible data disks $6

or take everything for $1300 shipped.

From: dave <dave@mbha.demon.co.uk>
Message-ID: <840785995snz@mbha.demon.co.uk>
Source record: 139481

In article <321c9cc21183dbb@sn.no> hallvart@sn.no "Hallvard Tangeraas" writes:

] Has anyone here successfully inserted sound samples into the terminal
] emulator "Connect"? (different sound samples can be used for the different
] alert messages).
]
] Well, I've got a few samples I'd like to use, but somehow they don't come
] out right when I try them in "Connect". They sound just fine when I use
] them in "Soundlab". Strange...
] Could it be that Soundlab's sample format isn't fully compatible with
] Connect's format? I use .SND samples.
] I don't have any other usable sample editor- any suggestions?
] (I use a TOS 2.06 based STe with 4Mbytes RAM).
]
] Hallvard

I have found that speed is quite often a problem - connect seems to play
slower (or was it faster?) for some samples. The ones I use now are the
ones which played back OK...

PAL video genlock available, made by Titan designs, only suitable for STE machines. Complete with PSU and leads, manuals, also a set of animation software including cyber-paint, sculpt and studio, image utils etc. Allows STE display to be overlayed onto any video source, dissolve, opaque or transparency feature, brightness and colour controls, RGB outputs, composite connections. A very expensive unit which has only been used for some 4-5 hrs!

Only ï¿½100 plus postage & packaging

Interested? Then email Simon on either: spesgw@cf.ac.uk (work) or 106247.343@compuserve.com (home / weekends).Also lots of other professional atari software available, video digitising hardware, trilock multi platform digital genlock unit (PAL/NTSC) (by Hama) etc...

3137. Re: Animation software?

I don't know of anything that handles multiple frame stuff like this, apart from Prism Paint 2. This package allows you to display single frames from a SEQ or ANM file and paint or edit the frames. Otherwise not sure of any others though maybe on the falcon? For animation stuff (not video) the phase-4 series stuff is very good, i.e. Chronos 3D, Phoenix 2, Cybersculpt etc, this creates keyframe 3D animations. For 2D stuff, cyberpaint is good, as is aegis animator. For more tidy stuff, DA Vektor Pro is hard to beat with excellent animation of vector and bitmap stuff.

Simon

You may have a problem. As I recall, the UK keyboards have an extra key
down by the alternate key. There should be a utility out there that will
reconfigure to a foreign character set, though. Another thing you should
try is locating the backslash using a text editor. Just type every key,
with and without a shift and you should find it. Unless it's mapped to
the key we don't get in North America.

Hi,

I can tell you that there is a version (1.50) which has got this feature, but it has got some problems with the reschange on the falcon so I don't kow when Guillaume will release it. The TGA saving works perfect and you can load the frames in one go into Apex Media for example.

Very nice.

VJ means Van-Jacobson compression, which is a name for CSLIP.
You're right, no official version of STiK is capable of doing
this. However with CSLIP at the other side he wouldn't even
succeed to resolve hostnames.

> don't remember, but it's ok. One of these doesn't exist anyway. As
> soon as they turned it of, everything works very well, and very fast.
> Actually, almost 3 times faster than my cousins PC (486, 33mhz , same
> modem zoom 14400) on america on line.

Yes, STiK is faster than most other micro computer TCP/IP stacks, and the
developers are proud of it ;-)

Cheers Peter

RT> email.

I tried it, got this:

502 You have no permission to talk. Goodbye.

Demon gave me this:

502 access violation

Seems a polite but curt way of saying, 'You're not one of our
subscribers, p!ss off!' :)
I tried them out by changing the 'nntp addserver' line in STARTUP.NOS
and the top line in NNTP.DAT to the relevant server. Is that correct or is
there another way of doing it?
Thanks for the advice, I have at least now got news working with CIS's
servers.

Dear Atari Fans,

I just remembered my old Atari 1040ST and this great game called Bard's Tale. I would really like to play that again, but unfortunately I sold my Atari about 6 years ago.

So, my question is whether any of you know about a PC version of Bard's Tale and where I can download it. If there isn't a PC version, any suggestions for emulators very welcome.

Cheers,

Carsten

Yeah, I could try different sample formats, even though the manual talks
about .SND and .MOD files. The "high bit" on/off definitely makes a
difference. I guess I need to leave it "on" (that's where it sounds
terrible and distorted in "Soundslad", right?)

Hi,

Some simple questions:

I must buy a computer for musical sequencing, and I've seen that most musical groups use ATARI ST 1040.

It's a good computer for this kind of work ???

Which are the difference between ATARI ST 1040, ATARI ST 1040 F ???

There is some "strange configuration" I must look for ???

Where I can find freeware or shareware programs for it ???

There is some place where I can find musical sequences fot CUBASE or LOGIC ???

Thanks

Antonio

P.S.
Please answer me via direct E-mail ...I'm not in subscription with this newsgroup....

I'm very close to getting a Falcon...pretty much made up my mind.

I'm thinking the best option for Atarians on the internet just might
be Linux (for those with a FAlcon or TT). How hard is it to get
Netscape running on a Falcon/Linux set up? I love CAB...but the
Java scripts and so fourth have peaked my interest. I'm also interested
in learning how far Atari Linux has come in supporting Falcon hardware...
playing samples or mpegs for instance...or using the special DSP chip for
unfreezing jpegs. Dot, Dot, Dot...

Yes! that's the exact same problem as I have- the samples are played a lot
slower than when played in an editor or another sample player.
Does anyone know why?
I know that Connect only accepts samples in certain frequency formats (6,
12, 25 and 50KHz), but even by converting my samples to these frequencies
they wouldn't work.

The only comment I can make is that on the Falcon(mine: stock 16 Mhz),
Linux is unbearably slow. It's quite a bit zippier on a TT.

3172. Shareware and registration keys

Newsgroup: comp.sys.atari.st
Date: 1996-08-24 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <4vng5m$3an@news.pacifier.com>
Source record: 139408

p > So the question I asked myself is why shareware authors use a
p > registration key method ???

I can only speak for myself, but there are a number of reasons why "I" use a registration key file.

p > So why not simply supply a copy of the program with the features
p > fully removed ??? not just temporarely disabled, but completely
p > missing

From the authors standpoint, this means you have to have TWO copies of the program on your system. The demo version, and the registered version. If you have only one program you are writing this isn't a big deal. But, when you have several programs going at once, this gets to be confusing and wasteful of disk space.

From another standpoint, you have TWO programs to update everytime you write an update to the program. I used this method for a short time, and found it difficult to synchronize the demo and registered versions.

p > instead of sending out a registration code, they would send out the
p > complete program (latest version of ?)

Thats exactly why a registration key makes more sense...

Lets say I have 100 customers who purchased my program. If I write an update that means I have to send out the update to 100 users. At a minimum, I would need 100 floppy disks ($70-$100), 100 envelopes ($2), and 2 stamps per envelope ($64). Thats a big expense, not to mention the time it would take to copy 100 disks, and prepare each package. Even if I could send the majority through E-mail, thats a lot of work.

On the other hand, with a registration key, my customers can simply download the latest demo version and upgrade for free. It doesn't cost me anything, it's convenient for the user (they don't have to wait for me to send them a disk), and it's easy to do.

p > these are some of the same pirates that cracked games software,
p > which had some pretty advanced protection

One thing I always keep in mind is that pirates WILL crack a registration key. It's like a game to them. You make it tougher, they find it a challenge. They care very little what effect it has on you or your business.

The best you can do is try to make it difficult for the AVERAGE USER, not the seasoned pirate. Odds are the pirate wouldn't pay for your product anyway.

I admit, I've had one of my programs (Mountain Reader II), cracked by pirates. I have no way of knowing how many sales I lost because of it. At first it really bugged me, but I soon accepted it as part of writing software. You simply change your security key and move on...

From my perspective, the advantages of using a registration key far outweigh the disadvantages of the alternatives. I usually release an update to my programs every few months. I would have to lose a lot of sales to pirates to exceed the expense of sending out updates to registered customers.

From: orb@u.washington.edu
Message-ID: <4vnjum$89f@nntp5.u.washington.edu>
Source record: 139416

I've been trying to get STiK to work for a couple hours now with no luck. Mainly the problem seems to be that the modem isn't recognizing the carrier. This is when the modem actually dials-- often times it doesn t even dial.

I'm using a USRobitics Sportster 28.8 with DIP switches 1, 3, 5 and 8 set. The baud rate is set to 19200 and i'm using modem 1 (i tried the other serial ports as well). I tried installing hsmodem7, that didn't make a difference. My computer is a TT030 with 4MB ST ram and another 4 TT. I've got a valid DNS entry from my provider, so that shouldn't be a problem.

any help would be appreciated, i'd really like to get stik working :)

s> I could try before registering with one of the other viewers.

You could always try the FaST Club's WEB page to see if a demo is available:

http://www.compulink.co.uk/~sta/

Alternatively, EMail Paul Glover at stclub@cix.compulink.co.uk or
j_hughes@cix.compulink.co.uk to see whether they know of a locatio

s> Is Imagecopy any faster at loading jpg's, it can take some time with
s> the programs I have tried, but the results are very good.

JPGs, by their very nature and the processing speed of your hardware, do take
a while to extract with all software that I've used. I don't think
Imagecopy's the fastest but it's no slower than you're used to.

s> I do like the sound of imagecopy4 but I would appreciate any comments
s> on it's use.

Individual features may be bettered using other software, but the full
package of features with Imagecopy is second to none ISTM. Batch conversions
of picture formats, full control of screen display, image formats for display
(inc excellent dithering) and especially for printing, transparent GIFs,
picture cataloguing etc optional support for PhotoCD -plus it's still in
development. From my own experience I'm happy to recommend it.

s> Can I view jpg's on my color monitor as well as with SOL ot Gemview?

Of course.

s> What is the best program for picture viewing (jpg) on the STE?

Specifically for that format and considering the large uncompressed file size
for JPGs the best viewer would seem to be 1st Guide due to the way it uses
memory efficiently.

>code to the stuff there.
>
>This would mean on registration of the program the quthor would
>instead of sending out a registration code, they would send out the
>complete program (latest version of ?).

The problem is that every time you have to update the program you must also send out a new version filling up peoples email boxes and also don't forget not everyone has an internet account if you have 100 users in over 20 countries then every time you tweak that interface a little then it costs you a fortune. Also if pirates will crack keys what is to stop them juswt copying a ful version? Copy protection on the disk is not usually possible due to the fact that most stuff goes on hard drives, if you think about it then is it easier to copy a disk or dig out your Hex editor and crack the prog?

>I know this would mean a slightly bigger email, or sending a disk.
>But surely this would mean less cracked copies going around, and more
>registrations.

>As I see it, it removes the temptation from the pirates, who can't do
>anything about altering the shareware (demo) version. And instead
>leaves the piracy in the hands of th user who _paid_ for the copy (I
>would guess people who paid for their copy might be less likely to
>dish copies out left right and centre ???).

If a program was 15 quid or so then why shouldn't a few mates all chip in a few quid and take a copy for themselves, I expect most people find out how to crak the keys from a code given by the authour anyway so it's still a problem.

>Please remeber that these are some of the same pirates that cracked
>games software, which had some pretty advanced protection, including
>scrambled disk formats, multiple codes and encyptions throughout the
>program etc. - I think most shareware authors would find it difficult

>I'm not planning on Making a FTP site at the moment but how do you make one?
>Can someone sent me some details?

a *proper* FTP site with decent speed like the ones that we all know
and love will cost you a fortune to set up unless you already have a
leased line, powerful machine and a huge hard drive, forget that. But
as you are using NOS like me there is a very simple way to make your
machine acessible by FTP whilst you are online, make a file in the
Oasis folder called "FTPUSERS" and put something like this in it:

newt pass k:\software\newton\0new\ 5
ftp * g:\oasis\ftp 3

These lins have 4 parts: login, password, path that will be accessed
and the code for access (these can be added together) I believe they
are: 1-read only, 2 read and write (no overwrite), 4 read and write
with overwrite. Then when logged on type 'start ftp' or add it to your
startup.nos with all the other start commands. Then people can just
ftp to: shaw1.demon.co.uk .

>ALso how do you make a BBS.

Buy a machine you never want again, get a new phoneline, new modem,
big hard drive and some BBS software (demon's ftp site has some). Set
it all up and put loads of files on it, tell everyone and wait.

I know that most stuff isn't as easy as I've made it sound but that
would take ages but I do have a life(ish) :)

3187. .Net Made Easy

Newsgroup: comp.sys.atari.st
Date: 1996-08-24 00:00:00 UTC
From: Stuart@shaw1.demon.co.uk
Message-ID: <840993854_OASIS_@shaw1.demon.co.uk>
Source record: 139423

I've wrote a programme to teach people parts off the Internet.

If you want a copy email me at: Stuart@shaw1.demon.co.uk
and I'll send it you though Email.

Please State if you want it has
LZH or ZIP.

V1 will teach you about IRC, FTP, NOS, EMAILS and WEB.

If you know the Internet or you just what to look at this programme
just email me. It's FREE.

I'll send it to you once I get the bugs fixed and get permission for some
IRC Nicknames.
If you email straight away you will have to wait 2 weeks.
If you have to write longer just re email me.

I Think that NVDI 4 programming guidelines in english can be of
interest for many people. I Looked for nvdiguid.lzh but only found a
german version(with PATCH_NV, Thanks).

Please upload it on FTP, thanks.

Real money? Don't know about that one. TI dumped our 99/4As some 13 years ago, and they still aren't more than about $10 in a thrift shop. And the REAL classics, like the Osbourne or the Altair, eeeven if you COULD find one, it wouldntt be worth much. Our good old machines don't have much monetary value.

A lot of love though!

Hello world,

I'm using CAB under Mint/Mintnet mostly without any problem but
recently I discovered that there are some site I can't viste with the
graphics on. One such site for instance is http://www.club.innet.be
Unfortunately this is the place where I want to put my homepage.
Whenever I viste this site I always receive corrupted graphics and as
a result of that a runtime error.

Can someone explains me why certain sites behaves like that.

Regards
Martin

Just use a ZIP disk formatted for a PC, the Atari and the Mac should both be
able to read it.

Of course, this should not be an issue with Falcon owners anyhow, we
Atarians have always been more concerned with the OS and hardware (see my
Falcon flexing its FX?) than software base, anyway, right?

>
> !ynoT....ATARI Programmer who is sick of people reviewing good
> software and saying "shame they didn't make it Falcon comapatable"
> PS...Also having a bad week decorating :(((

If you are going to write software now, you should write for the apex,
not the nadir, unless you really want to write for the PC. It's that
backwards thinking that cripples Intel-based machines.

Of course a lot of software can do that.
Papillon can create jpg and gif (tif I don't remember) and can import
export as you want. Also BMP, I don't know bpm. Probaly mispelling.
True paint also does that.
I think image copy does that too. You have to see which one you'll
prefer.

Doesn't just hitting "ESC"ape work for you?

There was also a small program on an old STFormat disk, FMC.Prg that you
put in your Auto folder, this "Forced" a media change everytime the
floppy was accessed...

3203. Help! Messed up my HD!

Newsgroup: comp.sys.atari.st
Date: 1996-08-24 00:00:00 UTC
From: thaanuj@kira.peak.org
Message-ID: <4vooe2$gc4@kira.peak.org>
Source record: 139439

I've been thinking of installing Linux on my TT for some time now. Today I decided to give it a try. I was following some instructions I got from Billy D'Augustine's web pages. Everything was going pretty well. I set up a Minix partition, downloaded a bunch of stuff to it. I got Linux to run from a RAMdisk, and set up a ext2 partition for the bulk of the Linux stuff to reside on. As I was gunzipping and untarring everything, I ran out of space on the partitions. Oh well, I thought. I'll worry about this Linux business later.

I rebooted. All the AUTO folder stuff was loading normally, until it got to MiNT where it locked up. No bombs or anything, just locked up. I tried a few more times, same result. I tried booting off a floppy. AHDI (ver5, I know, it's old...) would give two bombs and return to the desktop without loading the driver.

My only other idea is to try to download another copy of MiNT and squeeze it onto a floppy with AHDI and see what happens. If anybody else can help or offer a suggestion, I'd appreciate it a lot.

Thanks,

John Thaanum thaanuj@peak.org

Sorry to post this to your newsgroup, but I had to try it!

I read this and thought, "What could I lose?"
Read through it and maybe you'll like to try it as well!
But please be honest. That is how it works.

"MAKE-MONEY-FAST"

----- Adapted article by Jody Vining (#4 below) ----------------

Want to make a few bucks? Quick, easy and cheap?

Ok ok, we have all heard this before, laughed at it, thought it was stupid, so did I. But one day, I was bored, and wanted to see if this thing really works, the now infamous newsgroup "make-money-fast" routine.
And well, to my surprise, it ACTUALLY WORKED. I didn't make $50,000 like some said, but I DID make $3,200 in 1 month. Thats not bad for a $5 investment!

So now try it, maybe you'll make less, maybe you'll make more, but its worth a shot right?

The procedure is very simple.

STEP 1. Write your name and address on 5 separate pieces of paper with the words "PLEASE ADD ME TO YOUR MAILING LIST". Fold a $1 note or money order or bank draft in each of the pieces of paper and mail them to the following five addresses:

---
1. Sahba Zadeh, 16115 122 Pl. NE, Bothell, WA 98011, USA

2. John England, 570 Vista Ave. Palo Alto, CA 94306, USA

3. Jeannette Bidegain, 2301 Redwood Street, #1406, Las Vegas, NV 89102,USA

4. Jody Vining, 987 Shetland Ave, Winter Springs, FL, 32708

5. Mitch Whiteley, 1026 N. 510 W. Apt. 4A, Logan, UT 84341

STEP 2. Now remove the 1st name on the list, move the other 4 names up (5 becomes 4, 4 becomes 3 etc) and put your name and address as number 5 on the list. You can do this by re-typing this article or simply editing and re-posting it in this or another newsgroup.

STEP 3. Post your amended article to at least 200 new groups (there are 17 000 of them).

You are now in the Mail Order Investment Business and you will start receiving $1 returns by mail within a week or two. The more newsgroups you post to, the bigger your return will be. You may want to rent a Post Office Box to handle the volume of mail you are likely to receive.

If you wish to remain anonymous, you can use a pseudonym such as "The Manager" or "The Investor", but make sure your address is correct!

NOW LET ME TELL YOU WHY THIS SYSTEM WORKS!

Of every 200 postings I made, I received an average of 5 replies, YES - ONLY 5, each with a $1 bill enclosed. You make $5 for every 200 postings WITH YOUR NAME AT NUMBER 5.

Each person who sent you $1, now also makes let's say,only 200 additional postings WITH YOUR NAME AT NUMBER 4, i.e. 1000 postings. On average therefore, 50 people will send you $1 with your name at number 4. You make $50.

Your 50 new agents make 200 posting each WITH YOUR NAME AT NUMBER 3 or 10 000 postings - average return 500 at $1 each is $500. They make 200 postings each WITH YOUR NAME AT NUMBER 2 = 100 000 postings = 5 000 returns at $1 each = $5 000.

Finally, 5 000 people make 200 postings each WITH YOUR NAME AT NUMBER 1 and you get a return of $50 000 before you name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE ONLY MAKES 200 POSTINGS! Total income in one cycle = $55 500.

From time to time, when your name is no longer on the list, you take the latest posting that is appearing in the newsgroups, SEND OUT ANOTHER $5 TO THE NAMES THAT ARE ON THE LIST, PUT YOUR NAME IN AT NUMBER 5 AND START POSTING AGAIN. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Let's review the reasons why you should do this: THE ONLY COST FACTORS ARE 5 STAMPS, 5 ENVELOPES, AND 5 $1 BILLS. Anyone can afford five dollars to put into such an effortless investment with SPECTACULAR RETURNS.

Some people have said to me "What happens if the scheme is 'played out' and no one sends me any money"? Big deal! So you lose $5 - but what are the chances of that happening?

Do you realise how many Internet Users there are? Do you realise how many times this scheme can be utilised over and over again - with COMPLETELY NEW people participating?

There are not HUNDREDS, NOT EVEN THOUSANDS, BUT HUNDREDS OF THOUSANDS OF NEW INTERNET USERS EVERY MONTH!

Remember, read the instructions carefully and play FAIRLY...that's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the newsgroup postings to make sure everyone is playing fairly. You know where your name should be.

3205. Epson Stylus 800 Drivers; Where??

S> References: <553846484.99036.34.starship@3rdplanet.com>
S>
S> Highsoft Basic is to plain for me.
S> You can do more with GFA Basic. I prefer the IF's and other things.

Excuse me? Are you unaware of IF-THEN-ELSE, CASE-SELECT, DO [WHILE|UNTIL],
and all the other control constructs in Highsoft?

You can't do "more" in GFA (I have both, plus STOS), but you can do an awful
lot of things using "direct" TOS calls, if you haven't set GFA to use "legal"
calls - thus making GFA crash (or do other, even less desirable things) on
versions of TOS different to the one the compiler was running under.

Don't get me wrong - used properly, GFA is perfectly fine. It's jsut that
there are so many programs out there that were compiled under GFA using
direct calls, that I try to avoid all GFA programs unless I know the author
used the vector settings.

3210. Re: Shareware and registration keys

Newsgroup: comp.sys.atari.st
Date: 1996-08-24 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <555264198.49383.4.starship@3rdplanet.com>
Source record: 139446

phil4@phil4.demon.co.uk barked in COMP.SYS.ATARI.ST on 24 Aug 96:

p> Newsgroups: comp.sys.atari.st
p> Reply-To: phil4@phil4.demon.co.uk
p>
p> I just re-read Frank Charlton's article in STF 66 on Shareware piracy,
p> and thought a few points.
p>
p> Most of the piracy problems seemed to be with programs that had a key
p> registration system, of some sort, which would once the user had typed
p> in the correct key, allow all the features to be used.
p>
p> Apparently software pirates are very easily able to crack the key
p> system, and either export it to their own program, which then
p> generates valid keys, or to register a version.
p>
p> So the question I asked myself is why shareware authors use a
p> registration key method ???
p>
p> I can appreciate that they'd rather not supply complete copied to
p> everyone, because people wouldn't register (for what ever reason).
p>
p> So why not simply supply a copy of the program with the features full
p> removed ??? not just temporarely dissabled, but completely missing, no
p> code to the stuff there.
p>
p> This would mean on registration of the program the quthor would
p> instead of sending out a registration code, they would send out the
p> complete program (latest version of ?).
p>
p> I know this would mean a slightly bigger email, or sending a disk.
p> But surely this would mean less cracked copies going around, and more
p> registrations.
p>
p> As I see it, it removes the temptation from the pirates, who can't do
p> anything about altering the shareware (demo) version. And instead
p> leaves the piracy in the hands of th user who _paid_ for the copy (I
p> would guess people who paid for their copy might be less likely to
p> dish copies out left right and centre ???).
p>
p> Anyway thats my idea. If you need to release crippled versions (which
p> I am against btw.) then why not make it a properly crippled version,
p> rather than one which simply needs a key to make it work properly ???
p>

p> Please remeber that these are some of the same pirates that cracked
p> games software, which had some pretty advanced protection, including
p> scrambled disk formats, multiple codes and encyptions throughout the
p> program etc. - I think most shareware authors would find it difficult
p> to match this sort of encryption.

Normally, I wouldn't quote the whole message, but there are too many points here to cut much, if any.

Firstly, Phil, the point of shareware is to let you do a complete install, get registereed, enter the key, and then you don't have to make any changes. Key systems keep honest users honest; pirates will simply find a complete, registered version if the crippled version is totally missing features.

The author will have a list of who has registered; no one else will get support. Registration is not just to get the key that unlocks the disabled features; you also get the author's ear and special consideration when new features are desired.

Also, in many cases, the version shows "registered" or "unregistered" in the product ID; go online with a phoney "key" and you'll find out jsut how fast you become a pariah in Atariland.

3211. World flags.

Newsgroup: comp.sys.atari.st
Date: 1996-08-24 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <76008426_Beta04_OASIS_NEWS@nest.demon.co.uk>
Source record: 139447
Cross-posted to: comp.sys.atari.st,demon.homepages.authoring

I'm looking to include some national country flags in my WWW pages,
but can not locate a source of the graphics required.

If anyone can help to locate flags in any graphic format for the
following countries it would be greatly appreciated:

United Kingdom
Canada
The United States
Germany
The Netherlands
Australasia
Italy
France
Spain
Switzerland (Offline)
Sweden
Czech Republic
Poland
Norway
Denmark
Luxembourg
South East Asia
Belgium

As an alternative I could use a world map, where I could colour code
the countries above.

Any assistance would be appreciated.

US$100 an hour? That would be daylight robbery! I guess it must be highly stressful for comp techs to repair dead and dying PC's all the time!! :)

BTW, the Computer Service Technician was only invented around the same time as the IBM and compatible too!! :)

An example of how unreliable PC's are is my work. The factory I am a technical staff member at can make a net profit of US$200000 a day. We buy mainly Compaq 486/586 PC's to run off our Novell server. At least a quarter of these PC's have had some trouble in the first year of service. And all of this from a big name such as Compaq?!! I ask you!! The problems are expensive to fix too, because most have involved replacing the motherboard. This is because Compaq (in their ultimate 'wisdom') surface mount stuff like disk controllers and video chips on their motherboards!!

Atari machines are similar (everything on motherboard) but do you see 25% of them failing? No you don't!!

I say Atari users 1, PC lo/u-sers 0 :)

Use "labels". Just set it for 3 labels per page, design the label and
choose "Print labels". Make sure you have first chosen "Enable label
printing" in File -> page setup -> labels.

Robert Wills <cj439@FreeNet.Carleton.CA> writes:

>get. I also have a problem importing graphics. They import on a separate
>screen which doesn't seem to relate to the "real" document. I just picked

Normally, when you import a graphic, you will be asked if you want to import it as an object or as a window. As an object, you get the whole graphic pasted right into your document (if it is HUGE, it must be resized .. either with the handles or use the EDIT COORDINATES from the menu). You can't crop (get just a portion) of the graphic if you import it as an object. If you import it as a window (as you seem to be doing) then the graphic is sent to a separate window, in which you can crop a portion of the graphic. Put your cursor in the upper left corner (actually any corner) and click, then move the mouse to outline the area you want to crop (the area you want to import into PageStream). Then go to the EDIT menu and click on COPY. This copies your cropped image to memory. Now exit the window (click on the close button) and you're back in PageStream. Now go back to the EDIT menu and click on PASTE. That will put the cropped image into PageStream.

It's really not too difficult once you've done it two or three times. The manual helps, but constant use is the best way to stay up on what to do.

I find PageStream much easier than Calamus, so it's all in your perception.

>>[Gluestik]
>>>>>http://www.cs.duke.edu/~dsb/files/gluestik_beta1.zoo

>>Why can't files be uploaded in more "standard" formats like .ZIP?

>Isn't zoo standard?

It's certainly been around as long as zip, if not longer. Heck, if he
wants a "standard" format, I can always bung up in .tar.Z form... ;)

>>That way they'll work fine with downloads in whichever browser people are
>>using (I've had problems with "Lynx" when downloading certain files- they
>>download as text files...).

>Just press D in lynx and it downloads as binary.

Which should now no longer be necessary, at least from my site, since
I've finally discovered that my server allows users to configure content
types; the file should now be served out as application/x-zoo, which all
browsers should get right.

And as long as I'm here, I might as well mention that version 0.02b1 of
GlueSTiK is now available. The URL is
<URL:http://www.cs.duke.edu/~dsb/files/gluestik-0.02b1.zoo>. This
version should be more stable with more STiK apps; so far I've tested it
with CAB, Finger, Forecast and Telnet and it seems to work fine. The
readme file is available separately at
<URL:http://www.cs.duke.edu/~dsb/files/gs-0.02b1-readme.txt>.

Johnny,

Your best bets are 1st choice: ImageCopy 4, 2nd choice STyle or Studio Convert.
These programs are available from most Atari retailers.
For Shareware solutions, try GemView

>I have an Atari 1040 STe with 4 megs and TOS 1.62/2.06
>Also is there an Atari prg that will let me modify .gif or .jpg image files?

You have a couple of choices again, True Paint and Studio Photo are the ones
I would suggest. These are commercial
For a shareware solution, try CrackArt

Hi,

About three years back I bought the 'Ultimate Disk' from Power Computing for my ST. I fiddled about with it but have never really understood what I was doing!

I bought it as I wanted to Hack my 'Player Manager' teams created in the afforsaid Kick Off2 series soccer game. I'd still like to be able to do that but I do not program and can't make head nor tail of the massess of code that gets output.

Does anyone still use this or an alternative? Is there a really good use for this piece of kit that I haven't sussed... what else is used for this sought of activity?

Lets have some secrets out in the open...

> regarding the protocols beiong used?

Colin (Sysop) has changed his modem to a 28800 and it prevented some
users, mainly those with 'Trust' modems from logging onto 42BBS.
Your not using a 'Trust' modem are you?
There is a simple fix apparantly but I don't know what it is, however I do
know who does, so I'll get the info and post it back to you.

There is the problem here as well dont forget of the author who dosnt
support the program anymore and so some users who want to register a
product MUST use the cracked version because they have no choice....
case in point.....Freeze Dried Term....(mine is legal btw!!)...the
author ripped off users because therer was a crack available....(btw
remember STF releasing this cracked key on one of their subscriber disks
not so long ago....?) I think if an author is not supporting a product
anymore IN ANY WAY then regardless of the fact that it is his original
intellectual property then there should be no complaint.

m> Isn't zoo standard?

Not really. Every web site I have visited (nad the firewall proxy where I work) recognizes zip as a binary file; many recognize lzh, but not all of them; some recognize arc; I haven't found one yet that knows zoo files are binaries, so I can't get them via http at all.

3237. Cab and wav/au ?

Newsgroup: comp.sys.atari.st
Date: 1996-08-25 00:00:00 UTC
From: Martin.Byttebier@ping.be
Message-ID: <841088624_OASIS_@ping.be>
Source record: 139325
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello everyone,

I wonder how I can play a *.au sound file whilst I'm online with Cab
(with Mint/Mintnet). I know one can use Looknsee (seigsmir) for *.wav
files (it works great) but are there some programs that displays
*.au?

Thanks
Martin

3238. 1040 ST Mouse problems

Newsgroup: comp.sys.atari.st
Date: 1996-08-25 00:00:00 UTC
From: Ton Martens <tmartens@pi.net>
Message-ID: <01bb92b7$b18d0460$15cfdc91@pi-user.pi.net>
Source record: 139326

Hi there,

I'm using an ST, and I'm having problems with the mouse.
I cleaned it, but still, the left-right movement is very poor and bumpy.
up-down movement is perfect. I opened the mouse and tried to adjust the
"led-component", no improvement however.
Does anyone know if this can be easily fixed ?

Is an ST mouse compatible with a PC (DOS) Mouse ?
Thanks,
Ton

3239. Calamus;PKSwrite;Return defect

Newsgroup: comp.sys.atari.st
Date: 1996-08-25 00:00:00 UTC
From: rarozijn@xs4all.nl
Message-ID: <4vq981$dmu@news.xs4all.nl>
Source record: 139327

Hi Folks,

We have this strange problem that I have never come across before: On my girlfriends computer we have put Calamus SL. Now, out of the blue (it used to work perfectly!) in the editor the return (CR) (or Enter) is defect; All of a sudden we are not able anymore to get to the line below. Back in the text-frame however, the return works again.

Anyone came across this problem? Anyone who knows or suspects the solution? I tried most everything: edit Calamus.set, replace Calamus.set, replace calamus.prg, replace PKSwrite.CXM etc.

I remember vaguely there was an alternative for PKSwrite which could be used in Calamus, but I can't remember any details. Anyone out there who can?

Thanks for the help.

Sander.

3240. Manual or helpfile about Superbase Pro

Newsgroup: comp.sys.atari.st

They way I see, if a shareware programmer is not going to support an obsolete package...then at least he/she should just release the registration key him/herself and make it PD.

Sinister Developers did that with all there games and Gordon Gibson told me about the keypresses you use to get past the shareware pleas. They are currently working on a Jag game right now.

Try

http://www.nosc.mil/planet_earth/images.html

http://www.wave.net/upg/immigration/flags.html

http://155.187.10.12/images/flags/nation/

The quality on some of these is not brilliant.

If you have a friend with a PC who hoards Magazine cover CDs, the Serif Mega Art Pack (or a cut down version) has been included in the past and includes quite a few flags.

Source record: 139336

I've been offered Grolier's Encyclopedia v.6.0 CD-ROM bundled with a
"Sarah" CD-Rom driver.
I'll need to buy a CD-ROM drive. What should work with this software??
2x, 3x,4x or what?
How good is the Grolier's....seems like I remember it got very good reviews
but how old is version 6?
How many megs of Ram is minimum to run this type of set-up on a 1040STf?
What other CD's will "Sarah" interface with my ATARI equipment?
I realize that a lot of info will be outdated by the time my 5 year-old
will want to use it, but if the price is right, maybe.....

Please keep the group up to date. I for myself are very interested in patches and the latest driver too. The symthoms here are 'vertical noise bars' on fixed offsets from left. The noise appears when the mouse moves over the 'sensitive' spots after which the noise appears. When 'scatching' the whole screen with the mouse, finally you get a 'jail'.
I have a MegaST with 4 Mb and a PAK68/030 @ 33Mhz in. Works like a charm. About 15 times a bare bones ST

Well, from what I hear, you can't just run Netscape on Linux (I've asked the same question before). You have to obtain the source code for it and compile it for the Atari version of Linux. Unfortunately, Netscape doesn't give those things out. So you can't do it that way as far as I know. If anyone has any evidence to the contrary, or if I've gotten my info wrong, please correct me! I'm saying all this second hand and may not even be quoting it quite right. But as far a I know, that's what's up with that. I personally haven't been able to get CAB (or any STiK software) to work with my provider, so I can't comment on the quality of CAB vs. Netscape. It would be nice to have a Netscape version for the Atari, so if nothing else my provider would actually know how to help me out with this problem, but as it is, we're just shooting into the dark with my STiK set-up. Just trying anything people suggest, to no avail. :/

Yesterday and this afternoon I have made the "on disk" version of the "Ultimate Virus Killer Book". In printed form, this was released a bit more than a year ago. I have updated the text and put it in the "ST NEWS" user interface so that the "UVK Book" can now be read from your monitor screen and printed out to your own desire.
The "UVK Book" on disk has been uploaded to ftp.uni-kl.de just a few minutes ago, so keep your eyes on the atari/utilities (or something like that) directory. The files can also be sent directly to you by asking me to mail them. It will be sent as a 333 Kb ZIP file. Additionally, you will also get the latest demo version of the "Ultimate Virus Killer", version 6.8D, as a 130 Kb ZIP file (I also uploaded this to ftp.uni-kl.de just now).

Source record: 139347

A possible solution: kick back your system-date to a date before 1st of July
and it will work. I bought one of the first releases and it refused to work too
:(but the next day i found an update disc in my letterbox :)

ha> out, don't sound, start to but don't finish, etc. does this
ha> sound like a clock/buffer problem? toad wants $79 to fix it.
ha> any other repair centers doing this in the usa?

Hi there,
It doesn't sound like the "normal" CPU-clock problem - which makes the audio crackle and sometimes even makes Cubase Audio hang or bomb out!
I've never heard of anyone having problems with the midi because of the CPU clock. I'd rather suspect there could be a problem with a 6850-chip or maybe poor contact in a cable or the midi connectors in the computer (or that you try to use a cracked program).
If you need the clock modifications, I can send the schematics by uuencoded e-mail to you. It's rather easy to do if you have experience with soldering pens.

Best regards,

Claes

Hi, I would like to upgrade the falcon from 4 to 14 or 16meg.
BTW I never understood, is it 14 or 16??
Anyway, what is the best price I could get.. And I probably would
prefer it with the wizz card. Or gizzmo or whatever.
Please give me some information about it.

3265. PROBLEMS: NVDI 4.10 + Atari Works

Newsgroup: comp.sys.atari.st
Date: 1996-08-25 00:00:00 UTC
From: bili6745@mach1.wlu.ca
Message-ID: <DwpFJs.7vt@info.uucp>
Source record: 139353

I've posted some requests for help before and people have offered a few ideas on this problem but so far I am still unable to use Atari Works and NVDI4.1 togeather.

If I boot AW and NVDI has my printer set for Epson LQ 180 I have no troubles. As soon as I try to load a different driver or set the Epson LQ to 360dpi, the program will die if I go to either the page set up or print menus.

All I really want to be able to do is print at 360dpi. I've tried to use the CPX that comes with NVDI4.1 to switch between 180dpi and 360dpi both before and after i've loaded Atari Works. It doesn't seem to matter when I make the switch.

A few days ago I deleted ALL of my NVDI files and installed the program again. This made no difference at all.

I you have any ideas PLEASE, PLEASE, PLEASE help me. School is starting soon and I would really like to solve this problem before then.

Try looking on the Olympic games site or a similar international sporting site.
There are always large numbers of flags on such sites, used to denote the
competitors' nationalities etc. .

t> mod. a PC mouse for ST?

A PC mouse that plugs into the "MS Bus port" can be modified; serial and PS/2 mouses won't work.

I'd appreciate it if someone could send me the text file explaining how to do this mod; I had it at one time, but it seems to have vanished, and I have 2 of the MS bus mousies that want converting.

Hi there..!
I need to convert some Hi Rez .img files to .bmp and .tif so I can
use them with MS Publisher (PC) Is there something that will do this?
I have an Atari 1040 STe with 4 megs and TOS 1.62/2.06
Also is there an Atari prg that will let me modify .gif or .jpg image files?

Thanks
Johnny

Dr. Simon G.K. Williams (williamssg@cf.ac.uk) wrote:
: I don't know of anything that handles multiple frame stuff like this,
: apart from Prism Paint 2. This package allows you to display single
: frames from a SEQ or ANM file and paint or edit the frames. Otherwise not
: sure of any others though maybe on the falcon? For animation stuff (not
: video) the phase-4 series stuff is very good, i.e. Chronos 3D, Phoenix 2,
: Cybersculpt etc, this creates keyframe 3D animations. For 2D stuff,
: cyberpaint is good, as is aegis animator. For more tidy stuff, DA Vektor
: Pro is hard to beat with excellent animation of vector and bitmap stuff.

MPEG Fever and Animator (the first does MPEG and the second does .FLIs)
will allow you to create the animation, but unfortunately they both require
TARGA pics (use a converter program e.g. GEMView or Studio Convert to switch
the pics from .GIF, I guess). Before any of you say, "Leslie, they're both
in french!" I can tell you that I have translated both (yes, I translate
both german and french to english) programs, and have only to send the
changed resource files to the appropriate authors, at which point, I expect
that there will be english versions floating around. (They're postcardware,
so cough up!) :)

3272. Appline - does it work not under MagiC?

Newsgroup: comp.sys.atari.st
Date: 1996-08-25 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GHZMEJUYUp@tos.ak.planet.gen.nz>
Source record: 139454

I have heard of the program Appline which puts a bar at the base of the display showing currently running tasks.

It sounds like it would be very useful, but it appears that it only runs under MagiC.

Can someone please confirm this, or will it operate also under MultiTOS? What about Geneva?

I know I could just download it and find out, but I must pay for my data and want to be sure it will work before getting it.

Thanks for any help.

The external programs are for when you receive a file, e.g. a ZIP file,
so that when you get such a file it will automatically load into the
external program.

So in the case of STZip, you could set it up for the ZIP format and whenever
you downloaded a ZIP format file it would load into STZip and let you de-archive
it right there and then, automatically.

This is as I understand it.

But not if you set it up with AHDICONF (or some similar name) - you can then choose what IDs you want in a similar manner to HDDriver.

You just choose "partition" from the HDX rightmost menu and put in what partitions you want, from 1 to something like 28 per drive.

LPS does a good job of playing .au files. Look for LPS124.LZH on Umich.

Hmm, one of these days I'll have to write that utimate sound player... Gem based, works with PSG, Replay, DMA and Falcon audio, every known audio format, perfect as a CAB helper...

What kind of drivers? I use a Stylus 800 with Pagestream. The 720c (?)
drivers work if you set the print density to 360x360 DPI. But they are
unusably slow with 2.5mb RAM. I have another driver ment for a 24-pin
printer that work much faster...

Well, if your using C, I'd think it would be easy to use #ifdef to disable
features, and set up a makefile so you can do "make demo" or "make full"
to make the two versions...

CL> to... _

I have Super Boot 8.1 set up to where I have to hold a shift key (or capslock) in order to call it up, since most of the time I don't need it (I normally use HotWire hot keys to change setups). It works well that way to show a picture and play a sound simultaneously. Sound is great using the STe's DMA chip, and I like the idea of having a picture to match the sound. The only thing I don't like is that it doesn't have the ability to recognize when the sound is over; you have to set it for a predetermined length of time to show the picture/play the sound.

John, FYI, it was quite the other way around. There was a crack released
because the famed Mr. Aaron Hopkins ripped off many of his loyal users.
He was a slimey jerk, and gives the shareware community a bad name. As
the old say goes, "what goes around, comes around". He got what he
deserved, in the end. He took money without intentionally sending out
his registration keys, and got many of his loyal users pissed off at
him. That is why the crack was released. He got his just-desserts.

Same here, I managed to log on with a 2400 Hayes, but not my V.32
14400 modem: I get through name and password, but no responses are
registered to allow me to quit (or anything else) from the messages
screen. Weired. I don't know the make of the modem, it doesn't say
anywhere, not even in the manual.

> Ah...yet another point to add to my 'Why I should find another
>provider' list.

Even if you stay with Compuserve only as a provider, I know it's possible to find a free POP3 server. At least it's possible in France. It's free, but a little slow as Compuserve to Internet links are in the USA...

There are free 'remailers' too, just like dotcom or pobox, but they dont have disc space for your mail, they just forward recieved mail to your real mailbox. Interesting if you change frequently your provider and want to have always the same mail address.

> Did you find that the news seemed rather slow as well?, I don't think
>I've seen one bit of news that was less than two days old.

Slow, yes! Sometimes there are new articles dated... 10-12 days ago reinjected in the server (1000 lines history file is not enough to filter them, for me it's 4 days only).

> Also, as the servers themselves seem very slow, how do I use other
>servers?

I dont have this problem? The Compuserve server is the fastest server I ever tested (from the Compuserve account). Up to 2500 CPS in the night, after midnight GMT. I always use 2 other servers, one in the States at 1500 CPS and one in Germany at 600 CPS (sometimes more, after 2:00 GMT).

To use another server, declare it in the startup.nos in an "nntp addserver news.server.name 60000" line, then create a new section in spool/news/nntp.dat with the server name (and date) followed by the groups you take from there (exactly like the first section, set for CIS). When you are connected, type 'nntp kick news.server.name' for each declared server, after waiting the end of each session.

And if you use Oasis 1.35, edit the spool/articles/batch.txt file to remove doubled rnews lines, or your message base will be corrupted. Do the same if you use the 'local post' feature... or nntp kick a newserver more than one time.

LPS123 supports almost all sound formats, Martin. It should work under
MiNT - I haven't tried it, but it works fine with TOS 1.02, 1.04 and 2.05
at least.

That's correct - in Netscape, the external programs are called "Helpers"
but it's the same thing. For example, you can install LPS123.TTP as the
external program for *.WAV and *.AU Files and get the sounds to play online
just like Netscape (if we could figure out the format of Realaudio files we
coud do the same thing with *.RA files). A good place to check this featue
is at http://www.pacifier.com/~pac - there are WAV files associated with
most of the ugly mugs posted up there.

>I keep saying - I tried posting and there was no response!

We've all heard that, but what I was saying was that for _years_ there
was very little activity. Files still appeared, but very infrequently.

I've not heard what explanation was given (if any) for the disappearance
of postings, but IMO it would be quite understandable if the moderator all
but stopped checking the email in his c.s.a.b account (assuming he had a
separate one).

>>2. Everything that gets put on a binary newsgroup has to be archived

>
>I thought that was the idea - that it be expired. That way it does not
>take up permanent space like ftp.

But, how often is a file only of use for two weeks?
I doubt there are any software packages for the Atari are updated so
frequently that there should be any problem for the ftp sites to keep up.
If you can't find something on an ftp site the reason is simply that noone
has uploaded it. I've uploaded things several times and the delay until the
files were generally available has never been longer than a week.

Also, it should be rather obvious that taking up space on tens of thousands
of hard drives for two weeks is worse than taking up space on half a dozen
or so for a couple of years.

>>Usenet news distribution is _very_ far from free, while ftp only takes
>>net bandwidth for actual accesses.
>
>A suitable killfile can allow announcements only through. Of course,
>there is no need to subscribe to the group in the first place if you
>are not interested.

I'm quite explicitly talking about Usenet _distribution_.
Whether a single user looks at a message is completely irrelevant to the
distribution costs.

>>The huge number of IBM users makes distribution via Usenet a lot more
>>defensible. It might even save bandwidth if a large enough number of
>>people want the files. That'll never be the case for Atari users.
>
>To my mind, this is reverse logic. A huge number of postings equates
>to a huge amount of data, most of which will be ignored. This is a
>good reason for forcing high bandwith groups into using ftp, not low
>bandwidth ones.

No, it isn't.
If 100.000 PC users are likely to be interested in a file, a distribution
to say 10.000 Usenet servers will use about one tenth of the Internet
bandwidth required if all the users fetched the file separately via ftp.

I'd be surprised if as many as 1000 Atari users are interested in and can
access any of the files posted to an Atari binary group.

Of course, using the binary distribution groups for niche software is not
a good idea for the PC either and personally I'd never look for files in
a binary group in any case nowadays.

>Using you own argument, if all this is to be archived then what
>difference does one or two postings for atari make?

The next line of my last message was supposed to illustrate that. You can
find it again a couple of lines below this sentence.

Said in another way:
Since there's already so much pollution, why shouldn't I also drive to
the grocery around the corner?

>>Why don't we create 20 new Atari newsgroups?
>
>'cos then I'd have to keep scrolling up and down my group list and it
>would make my arm ache. :-)
>
>Yes, there probably will be an initial flurry of postings then
>comparitively few after, but perhaps one thing has slipped people's

That's a good reason to be against the creation of Atari binary groups.

>minds - Nos can bomb or corrupt on posting. Folks know how to get
>round this now, so I reckon there will be more than before.

Uhm, I must admit I have no idea what you're talking about here.
If it has something to do with postings in alt.binaries.atari.st (or
whatever the new group is called), I can't comment since I'm one of the
apparently rather large group of people who can't access that easily.

It depends on what you are looking for in the way of a print driver.
If it is for PageStream or Calimus(?) I think Genie has the printer
Driver(s) online. Don't quote me on that though.

I am presuming that this is the Epson Stylus Color II Printer,
if it is then Genie does have the printer Drivers for it. (Compuserve
might also have them.)

Guess not. Marpet's 8 Meg expansion board never really made it to the big time.

> Does it utilize SIMMS in the STe's socket in addition to the aboveboard

Yes, it needed the full 4 megs to be installed before the 'above 4 meg'
bit would work.

> RAM added with the new hardware?

> What's out there to do the same thing with my 1040STf used as a backup unit?

Somebody in Germany did a board for the STFM/Mega ST, I could dig up the
name, but I believe he has no more boards.

> Are they difficult as a do-it-yourself project?

Depends on your electronics experience, but its not a beginner's project.

Netscape won't work at all and never will. The reason for this is
simple: There are no Netscape binaries for Motorola 68K unix
architectures and the Netscape people don't intend to support these
platforms. Note that Netscape sources are not available, i. e. you won't
be able to compile it yourself.

You need an ACSI host adapter that supports parity. Otherwise the ZIP
won't be recognized. Concerning the software any driver that supports
removable drives will do. If you want to make use of the password based
read/write protection feature of the ZIP drive you can use HDDRIVER.
There is a demo version available on

ftp://acp5.chemie.uni-kl.de/pub/atari

: Please give me some information about it.

It is 14 mb you get but you still have to put 16 megs in. Although I won't tell you what you *should* do, I will tell you what I am doing: I'm using an FX card for memory (haven't finished installing it yet as I already have a PowerUp II and a ScreenBlaster), and when the makers of the FX card get past the 14 MB limit, I will switch my 4 meg daughtercard from Atari for a RAM Gizmo, putting a 16 MB SIMM in it. (I also intend to add the second FX board that allows me to add an additional 16 MB, bringing me up to 46 MB of RAM).

I hope that I've been of some help.

I have a Hard & Soft Vantage 2000 card, which also is available with a 32MHz speeder. The card has one 72-pin SIMM-slot for either a 4Mb or 16Mb SIMM.

The strange thing is that Gembench's ram-access test gives 140% in 36/18MHz mode and 112% i 18/18MHz with the Vantage card installed, and "only" 112% with my original Atari 4Mb card in both 36/18 and 18/18 mode...

I am close to completing my current project, I need to test that it
works on tos 206, It is a GAME :)

Am looking for someone who has access to tos 2o6 and any other
version, ie: switchable tos? this is needed to compare?
Someone who is willing to download the zip file from my page, (Aprox'
a quarter of a meg in size), test and get back to me asap,
If anyone has an STe and FM then thats even better as the game is
enhanced on a STe :)
Am looking for someone in the UK, this is because of the difference
in hertz in other countries and nothing personal :)

The test version is ready now, so please get in touch A.S.A.P

Cheers.............!ynoT

I think it stands for "portable document format" or something like that,
which should be some kind of universal format.
On the ST you can read .PDF files by using the Postscript interpreter
"Ghostscript". It's a bit tricky to set up though, and needs quite a lot of
disk-space (I'm not even sure if it would work with just a disk-drive).

Use HDDriver or SCSI-Tools and you got a nice success.
I use my ZIP for some Backups and also. First you must initalise
all ZIP-Disks you want to use with ZIP and your Atari.

To connect this ZIP to an ST etc. the SCSI-Hostadapter MUST create
a Parity-Signal! So this Drive will be work nice.

(LINK96 can handle this..)

From: troyc@bnr.ca
Message-ID: <4vsgqh$7om@batph8.bnr.ca>
Source record: 139280

I have an Atari TT030 for Sale:
Motorola 32MHz 68030 + coprocessor
8 Megs Ram Total (4/4)
40 Meg Quantum Harddrive
1.44 Meg Floppy
TOS 3.06
External DD drive
Great TT style Keyboard

Hard drive has both Atari software plus a full Linux Installation
(Linux ELF + X windows)

ST Users take note: This machine requires a VGA monitor.

$400 Firm, split shipping.

For $500, I will replace the 40meg HD with a Quantum 720 meg hard
drive with a full Linux 1.2.13pl10 setup and offer FREE shipping.

Misc for sale, prices DO NOT include shipping. Make offers, everything
must go because I don't want to lug it when I move:
Atari SC1224 Monitor $50
Spectre GCR + disks $50 ($40 with purchase of TT)
PC Ditto II (hardware + disks) $30
Everex 2400 Baud Modem $15
Avatex 1200 Baud Modem $10
Various Joysticks $10 each
Atari Mouse $10
sQuick mouse $15
Atari Trakball w/left button $15
TOS 2.05 $10
NEC Multisync II VGA Monitor $40
NOTE This monitor has sync problems when cold. That's why
it is so cheap. If you can fix monitors, then this is for you.
Very crisp picture when in sync. You have been warned.
Caveat Emptor. ***NOTE***

You should _only_ have sent it by email! It's bad form to post
binaries to a non-binary newsgroup.

A friend of mine has an atari 1040 ST computer. He used it to write a screen play and his assignments (he teaches at a local college) but now the he keeps getting the error message that the disk may be bad and he has been unable to retrieve his information from the disk. I know nothing about this machine but if anyone can give me some ideas on how he can get his information back from the bad disk, please email me at KDona1862@aol.com. Thanks.

From: hallvart@sn.no
Message-ID: <32221916fc1b1@sn.no>
Source record: 139296

The FTP site list is coming up soon, so in order to be up to date I need some help from *you*.

I'm a bit confused about the French site: "cnam"- I've taken notes of the "sunsite.cnam.fr" site as the usual cnam site's Atari ST directory was gone or something. Anyway, I read that someone had checked it again, and it suddenly worked again!

So, my question is: are there *two* (three including the Spanish mirror) cnam sites now?
Is one of the two a mirror site? Please reply as soon as possible so I can get the list updated and posted.

Hallvard

3326. HD Driver & Iomega JAZ

Newsgroup: comp.sys.atari.st
Date: 1996-08-26 00:00:00 UTC
From: mcandrew.d.w@nort.bwi.wec.com
Message-ID: <Dwr993.3t8@tron.bwi.wec.com>
Source record: 139297

Hi, folks. I am having an interesting problem (at least I think it may be a problem).

I have a JAZ drive that I had previously partitioned using ICD PRO into two equal partitions. Since then I have purchased version 5.12 of HD Driver and installed it on my internal Falcon IDE drive. When I boot up, HD Driver doesn't "see" the Jaz unless I run ICDBOOT (then it will).

I do have several SCSI devices (Syquest 270Mb external - #0, JAZ - #1, Toshiba CDROM - #3, Epson Scanner - #4). All the IDs are verified correct. By the way, all this hanging on a Falcon with max memory.

Any ideas? Or do I have to still maintain the use of ICDBOOT? (Thought I could eliminate it with the use of HD Driver...)

Thanks for any advice.

There is a software for ATARI, I think PD or shareware, that can
convert .au-files in several other formats like f.e. .wav.

After converting you can play the file in a wav-player-programm

> be a problem.
> any help would be appreciated, i'd really like to get stik working :)

I have a USR Sportster 28800 and have never had any trouble using it.
The DIP switches on mine are all up apart from 3, 5 and 8. They were
the factory defaults, they worked first time, so I left them.
Do you need the DTR override set?

I have had HSModem6 for some time now without problems but a recent
change to v7 seemed to cause more problems. Perhaps I didn't
configure it correctly. I went back to v6. My v6 had been
pre-config'd for the Falcon.

If you get it working you really should try using Serial 2 rather
than Modem 1 because it will allow you to use the 115200 baud max of
the modem.

These are the modem configuration lines from my STiK dial.scr file :

```
BAUD_RATE = 115200
HANGUP = ATH
PREFIX = ATDT
INIT = AT&N14&A3
```

I hope this helps in someway.

Rich.

3342. Help! Hard Drive Error...

Newsgroup: comp.sys.atari.st
Date: 1996-08-27 00:00:00 UTC
From: csh@falcon.sdi.agate.net
Message-ID: <841269792_OASIS_@falcon.sdi.agate.net>
Source record: 139114
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi all,

I'm in need of some expert advice.

When I turned on my Falcon today, everything seemed fine until the
DiamondEdge Disk Mirror auto-program ran. It went through all the
partitions
fine, execept J:, which is a SyQuest Removable 270MB. After being "busy"
for what seemed forever (maybe 10 seconds), the following message came up:

"DOS Error#-1Reading
Boot Sector Location 9912"

Then the boot-up continued and the desktop looked fine, and I found I could
read the files on drive J:

BUT, when I ran Diamond Edge to see what was wrong, it wouldn't even give
me the disk info. When it tried to access drive J:, I got the wonderful
"Data on disk in Drive J: may be damaged" message. After clicking on
Cancel, I got a dialog box saying:

"DOS Error #-11
Reading FAT Sectors
Location 3"

Rebooting once resulted in the same errors, but after re-booting AGAIN,
Drive J: seems to work wonderfully and Diamond Edge disk test reports no
errors.

Anyone know what happened? I'm afraid to use drive J: for fear of it
crashing for good.

I use HDDriver version 4 and have Boot Sectors and Root Sectors write
protected. (Is that part of the problem??)

Any help greatly appreciated,
--chris

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first item and $1.25 for each additional item, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 8.50 A.L.C.O.N. (Taito)
$ 6.00 All Aboard! (Terrific Software)

3349. Will a parallel ZIP drive work on an ST2?

Newsgroup: comp.sys.atari.st
Date: 1996-08-27 00:00:00 UTC
From: musik@tcsn.net*
Message-ID: <322380df.2723071@news.callamer.com>
Source record: 139121
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi all,

I know, lame question, but I'd like to know if a parallel-port Iomega ZIP drive will work on my ST2. I have one for my PC, and I love it, but would like to use it on my ST2, if possible. Does anyone have 'guest driver' software to allow the parallel ZIP to work on an ST?? T'would be wonderful!

THANKS a bunch :)

Ron Yost <musik@tcsn.net>

There's a TT program to do those emulations on a TT high-res monitor, but it looks for the TT hardware and won't work on any other machine. I can't remember the name, but it's from the same guy who did LEDPanel. He's in Germany.

Serial mice do indeed work. You just need a program interfacing the mouse. A program called Mouse 2.5 does that. It's on hensa on micros/atari/tos/q/q080/mouse25.lzh. (I didn't check other places, as I remembered it was on hensa)

Nah, Speed of Light is best on a color monitor and MGIF is best on a mono monitor, because both use 'tricks' to get more colors (or shades) than what you can normally get.

: t> Agreed. That, and AV Protocol support and Drag'n'Drop. Other than that,
: t> it's pretty well complete.

: Teradesk supports ArgV and Drag&Drop even on TOS 1.02 (I have that on the
: 1040ST next to me here).

Not ArgV, _AV_. It's used to communicate between program and/or accessories. If you've got a desktop which supports AV, and you, for example, drop a picture file icon onto, say, the GEMview icon, it'll check to see if GEMview's already running, and tell it to load the file if it does. If GEMview's not running, it'll be started up in the normal way. Drag'n'Drop is similar, except you can drop onto windows, and it's supported only by AES'es including and above 4.1. (With MultiTOS drag and drop, you can, for example, clip some text out of a MINIWIN console window, and drag it over to, say, a text editor window, without having to go through the clipboard (i.e., cut, switch application, paste from clipboard))

Hi y'all,

I will be posting the new version of Movie Player to alt.binaries.atari and the usual ftp and bbs sites in the next day or two.

This one will knock your eyes out!

Now you can take a disassembled mpg file or any sequence of TGA files and create your own MOV movie files! With compression!

I've tried it out. Use mpgfever to disassemble all those mpg files you can't find a full speed player for (I can't on my TT anyway) and make a quicktime file for M_Player. Biiiiig files but goooooood!

JEDI wrote this to Claes Holmerup about Cubase 2.0 (or higher) 'cracked'
version needed:
>> TOS version problems are always the programmers' fault, since
>> it indicates they haven't followed the rules set by the
>> hardware developer and in these cases there is no excuse.
>> Sadly, the copy protection is necessary to stop some of the
>> pirates. Without copy protection there would hardly be any
>> programs sold.
J>
J> BULLSHIT. Do you expend a lot of effort to be this clueless?
J> Copy protection only serves to put out mental defectives such
J> as yourself.

Everyone doesn't have the low mental abilities you obviously have, so it's not always correct to judge others by yourself...
If you would write a program and don't have another job to go to, how would you get your money to buy the food? By selling one program and allow anyone to copy it? That would be ok for someone that makes programs in his spare-time, but not when it comes to a company that has employees to pay for making software. Some sort of copy protection is absolutely needed - otherwise there would be no limitation of the illegal copying at all.
Continue to copy all the programs you need - who is there to stop you? Just remember that YOU are one of the people that make the Atari line of computers and the software for them go towards the grave. Another item: If you make pirate copies, you become a criminal. Have you ever read the users manual to any program? Do you even have ONE original program? It says quite clearly that it's illegal to copy the program for any purpose - but people like you would probably never care anyway... Just go ahead and send the software producers to bankrupcy, since this seems to be of little interest to you - you probably don't intend to buy any software anyway. If it really is of that little interest - why do you bother at all -just throw the computer away and away goes your problems with it (and all the legal users' problems with you).
Oh! You say the programs are too good to get rid of the computer? Well - if a program is worth using - it's worth buying, isn't it?
Otherwise you have no legal right to use the program!!!
I hope I've made my point quite clearly.

Regards,

Claes

> I've set CAF up as a desktop icon/installed application on my C-Lab
> Falcon MkII (TOS 4.02).

I'm no CAF expert but I might be able to hep you anyway!

Mark CAF that you have put on the desktop, choose 'install Application'
from the menu, here you will be able to choose from what path that the
application is to be runned from, choose 'Application', and not 'Top window'
then you could also choose the way that filenames are beeing sent to CAf if
you drop them on CAF, this is done in the popup below the one you recently
changed. it should say 'Full path' and not 'filename'

Hope this helps!

There are two problems with that method; the first is that many programmers
don't use C at all; the second is that, even if one does use C, that
leaves the delivery of the upgrade to registered users "up in the air"
still, and if the program is popular, the expense of bunging 100 disks into
the post can be significant. Thus, the registration must be significantly
higher, unless the author has no intention of ever upgrading the software.

M > That is how it works. "MAKE-MONEY-FAST"

Ok, I'm not replying to the jerk that sent this. His message doesn't even pretend to be legal. It doesn't even pretend not to be a pyramid. These things are illegal.

So, how do we go ahead & get the law after this guy? In my state, the state atterny general doesn't bother wasting his time with much serious criminal activity, but he _really_ goes after mail fraud. Would this situation be covered by state laws? Or is it fedral, due to the distrubution? There is no 'Internet police' that can take action against such crap, is there?

We have an e-mail address, & several mailing addresses. We know this type of scam is illegal in the USA. Now, how do we go about it?

I think the first 7 words of his message infurriate me the most, because clearly he is not.

t > I boot it up, It beeps non-stop until I hit a key.

Would this be the repeating key-click thing that happens once in a while?
Perhaps some chips are loose in it, or?

t > I have no disks, no idea how much memory, what it can do.

One meg of memory, unless someone be4 you upgraded it.

I'm thinking of putting up an AES 4.1 page, to start out it would have links to some enhancement programs, but later on maybe I could put up some programming info. Any interest?

OW> I wondering whether to purchase a copy of Imagecopy4.

I am very happy with Imagecopy4. I got it working before trying any of the pd/shareware programs, and never liked anything else enough to bother setting them up right. So, perhaps I'm missing something with them. :) But I recommend Imagecopy for general picture manipulation (conversion, etc. - not actual painting/drawing, of course!) & printing.

>format, perfect as a CAB helper...

Make a "Shell" for LPS123 (or any other TTP) that will run a TTP without opening a window at all, and you have a winner. All it has to do is accept the command line and pass it along to the designated TTP. For me, running a prog without letting it touch the existing display is the tough part.

Body handling: Inline uuencoded payload not displayed: RSVX.PRG

Hello Jared,

On 27 Aug 96, jdaddin@dfw.dfw.net (90:800/1.15) wrote:

j> If I set it up to run before MiNT is executed the patch seems to
j> be killed by MiNT loading.

I remember this one...

j> But, if I load it after MiNT, the system crashes when I try to access
j> the modem. Thanks.

Don't worry, you only need a small program called RSVX.PRG (374bytes!)
which must be loaded AFTER the HS drivers and BEFORE MiNT on startup. For
example, in this order on my falcon:

```
/Auto
-Drvin.prg
-Scc.prg
-RSVX.PRG
-Mint.prg
```

Theorically, you can launch those progs from the MINT.CNF file, but it
didn't work for me.

I got the file in an archive called 'HSMINT07.ZIP', i think...
Here it is UU-encoded, as i have no reliable e-mail access.

```
--start of uuecoded part--
--original length: 374b--
table
!"#$%&'()*+,-./0123456789:;<=>?
@ABCDEFGHIJKLMNOPQRSTUVWXYZ[\]^_
```

[Inline uuencoded payload not displayed: RSVX.PRG]

```
--end of uuecoded part--
```

Now you have HSMODEM2 and HSLAN in your u:/dev directory and you can reach
57600 bps in a multitasking OS. Enjoy ;)

I hope it will work for you. Bye bye Jared.

I had this happen when I set the memory allocation too low in the
config. file. I think it has to be 50k or greater. If that's set OK try
dropping any other ACC's and Auto folder prog's.

3377. Anyone get POVG3000 working?

Newsgroup: comp.sys.atari.st
Date: 1996-08-27 00:00:00 UTC
From: chriswil@southern.co.nz
Message-ID: <4vttnn$2t1@orm.southern.co.nz>
Source record: 139229

Hi there!

Has anyone managed to get POVG3000 working? I have uploaded this (large) archive to find that it refuses to work on my 4meg falcon. TOS 4 crashes with a bus error if I have less than about 3.5meg free RAM. When I have 3.5 megs RAM free or more it loads a TOS console, runs POV3 and sits there because there is no input file specified and then refuses to let anything else happen! :(

There is no documentation other than very basic instructions to get the program to work. Missing are RAM requirements, CPU/FPU requirements etc...

Perhaps these few details could be included in the description file that sits next to the main archive on the ftp sites because those of us who have to pay for ftp, email, www etc... as I do, do not really wish to grab software that will not work on our respective machines...

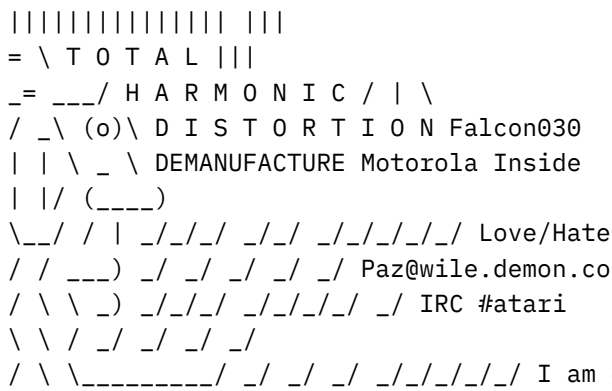
Yeah, tell me about it. I wanna play Hypersports again !! :((

>The speccy emulator I have is far more compatible than anything I've used on
>the PC or Mac, but no 128k support.

Stop it, you're torturing me... ;(((

>Also, it's a little slow even on the Falcon (because of GFA basic?).

It depends on the game. Cyber-run is far too slow to be playable, so is
Gunfright :(((In fact, any game that uses the pseudo multi-channel sound is
a little slow.
Still, that's one more reason to get that Nemesis board :)))))



>Anyway, it would be great to see this done. Doesn't the ST have the same
>soundchip as the enhanced Spectrums had?

Yes, exactly the same. So it shouldn't be that difficult to add 128k support.
That's easy for me to say .... :)

>Aarrghh...

Hello.

I have problem making my own data-cd's.
I use a Yamaha CDR-102 and Soundpools CD-recording program V.1.09.
I works great to record audio cd's, but when I record data/backup
the cd's will be unreadable.

Do anyone have any suggestions.

Best regards

Ronny

A strange effect that shouldn't happen, of course. Anybody else here who
has this problem?
Daniel, please try it once again with the current demo version of
HDDRIVER. (ftp://acp5.chemie.uni-kl.de/pub/atari/hddriver52.zip) Remove
all your resident programs for this test. Please check your SCSI
termination. Your Falcon should have a clock patch, of course.

Before. MiNT knows about it if it is loaded and passes some calls to it.
At least the 1.12 should do this... E.g. higher speeds works with Falcon, TT,
etc.

: Any ideas? Or do I have to still maintain the use of ICDBOOT? (Thought I
: could eliminate it with the use of HD Driver...)

: Thanks for any advice.

Okay, I am only guessing here, but when you formatted/partitioned the disk, did you specify AHDI compatibility? If you didn't, that is probably the reason why. ICD has its own partitioning scheme (is that what it's called?), and is not particularly compatible with any other hard disk driver. Anyway, to make a long story short (and this is, at least, something helpful), on your HDDriver disk in the \SOFT\ partition is an archive called ICD2AHDI which will likely fix the problem you're having. If you still need help, post another message and perhaps Uwe Seimet will respond (he seems to pop in once in a while). However, as confident as I am that this will work, I'm not guaranteeing that the data you have on there now will still be there if you use the program (I don't have ICD, so I never had to use ICD2AHDI), so back it up if you can. HDDriver is great, and worth the trouble you're having.

Date: 1996-08-27 00:00:00 UTC
From: jimhanner@e-mail.com
Message-ID: <4vu9dh$1qf@ef2007.efhd.ford.com>
Source record: 139235

Here's one that really bugs me - can anybody assist?

I've set CAF up as a desktop icon/installed application on my C-Lab Falcon MkII (TOS 4.02).

I have NVDI 2.5 and FDI Driver in the Auto folder and the bog-standard XControl Panel as an accessory.

If I double-click on CAF (or try to run it from F1), the screen clears and the bee appears. The problem is that the bee doesn't go away and the computer locks. No bombs appear.

If I re-boot and open CAF from the folder, it runs perfectly.

I guess I could just save the desktop so that the Cubase folder is open and the program icon is there, but using the F1 key is a lot easier.

Jim

I have atari works but not nvdi, so I may be way off on this. How much
memory do you have installed? I ask because the only symptom of Atari
Works that I can recall manifesting itself when you switch from 180dpi
to 360 dpi, is the dreaded black page which has a lot to do with having
enough memory to calculate the page(or what ever they call it) owing to
the fact that a page at 360 dpi takes 4 times the memory of the same page
at 180dpi! Just a thought!

Here's a message on the subject that I had saved from back in March when this subject last came up.

From mparrott@kendaco.telebyte.comThu Mar 21 11:33:03 1996
Date: 21 MAR 1996 03:52:47 GMT
From: Michael Parrott <mparrott@kendaco.telebyte.com>
Newsgroups: comp.sys.atari.st
Subject: Connecting a PC mouse to Atari ST

Enough people have asked that I've assembled some instructions for modifying a Microsoft Mouse (Bus Version Only!) to work with an Atari ST/STE/TT/Falcon. I have only tested this with the Microsoft Mouse II, but it should work with any mouse/trakball designed for a bus interface card on a PC. Included are general instructions for modifying the PC Bus mouse itself and for building an interface box which will allow any PC Bus mouse/trakball to be connected to an Atari ST/STE/TT/Falcon without further modification. Any particulars mentioned herein can easily be modified to fit whatever situation you may find yourself in - at least with respect to making a PC Bus mouse work on your Atari.

First, a NOTE: I am not in any way, shape or form responsible for any harm that may come to you, your computer, your mouse or other controller device, or anything whatsoever, through your use of the information contained in this file. While I believe all of the information to be accurate, I make no guarantees as to its accuracy and have no guarantee that you will perform everything in a safe manner or according the instructions provided. So you're on you're own here; however, it did work for me.

STUFF YOU MIGHT NEED FOR THIS PROJECT:

(items with "+" are for building the box)
(and may not be needed if you plan to)
(modify the bus device directly)

- Bus Mouse/Trakball + Electronics Project Box

+ Coffee, tea, soda, milk, water, beer, hard liquor,
Everclear or whatever liquid refreshment/stimulant
you feel necessary to continue

- Atari Mouse Cord (recommended) -OR- joystick cord with all 9
wires -OR- nine-wire conductor and DB-9 connector

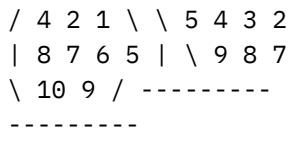
- Solder & Soldering Iron + Hot Glue Gun & glue sticks

- Ohmmeter/Multimeter + Drill

- No. 1 Philips and Slot screwdrivers

+ Aspirin or Non-aspirin pain reliever (just in case)

ON WITH THE SHOW



Here are the pin and signal assignments for the PC Bus mouse and Atari
mouse connectors:

Bus Mouse	Signal	Atari Mouse
1	Ground	8
2	Rt Btn	9 (Right Button)
3	--	-
4	--	-
5	LftBtn	6 (Left Button)
6	YA	3 (Vertical Cursor)
7	YB	4
8	XA	1 (Horizontal Cursor)
9	XB	2
10	+5v DC	7

Note that, as it pertains to this modification, pin 5 is not used on
the Atari connector, pin 3 does not exist on the Bus connector, and pin
4 on the Bus connector is not used.

Looking in from the business end of the connectors (i.e., the part
that normally plugs into the computer), the pins are labeled as follows
for the purposes of this mod (this may or may not match any standard
numbering conventions):

Bus Mouse	Atari Mouse
/-----\	

Note the blank area at the top of the "Bus Mouse" figure. This is a "key" of sorts to prevent improper insertion of the plug, and is a handy way to differentiate between a Bus plug and a PS/2 plug, both of which are round. Another way to tell the two apart is the Bus configuration has ten places for pins, while the PS/2 configuration has only 6 pins. YOU MUST USE A BUS MOUSE/TRAKBALL FOR THIS PROJECT TO WORK. Serial, PS/2 and MousePort mice do not have the proper signals to work with the Atari mouse port.

BEFORE GETTING STARTED:

There's several ways this mod can be done, and you'll want to prepare for each a little differently. The first step, of course, to read over all the instructions carefully and make sure you understand them before proceeding.

Obviously, the mouse/trakball has to plug into the Atari. The best way to do this is to use the cord from an unused Atari mouse. The second best way is to use a DB-9 connector, which can be attached directly to the cord of the bus mouse, or to an un-used Atari mouse cord which can then be patched to the bus mouse. Note that the mouse cord MUST HAVE ALL CONDUCTORS AVAILABLE with the exception of pin 5. Not all mice use the same number of conductors, and many have simply left the unused conductors out of the cord. You must use a cord which has the required conductors (1-4, 6-9) available for use. Joystick cables with the required conductors will also work, but are not as flexible as mouse cords; the same is true of most other cables you might make up yourself.

To simplify things later on, you might go ahead and determine which wire in the cable(s) are connected to which pins. Each wire should be a different color, which makes it easy to create a table listing each wire color and the pin it goes to. If the wires are all the same color, simply label each wire with a piece of tape and the number of the pin it connects with. You can get this information either by opening up the body of the PC Bus mouse and using an ohmmeter to trace continuity; checking things out visually, or by using a very small divining rod and immense faith in your ability to use it.

TO MODIFY THE BUS MOUSE/TRAKBALL DIRECTLY:

Using whatever 9-pin connector/cable combination you have chosen to use, simply connect the pins/wires from the Bus mouse connector to the Atari mouse connector as described in the chart at the beginning of this text.

If you will be cutting the connector off of the Bus mouse cord and replacing it with an Atari/DB-9 connector, make sure you have already generated a listing of what color wires go to what pins! Otherwise you'll be hard pressed to tell which wires go where and may never get it working right.

Once the connections have been made, check all of them and if all looks well, plug it in and give it a go. Make sure to check out all functions of the mouse (cursor up/down/left/right, left/right buttons). If it doesn't work properly, refer to TROUBLESHOOTING below for some tips. If it does work, congratualtions!

TO BUILD A BUS MOUSE/TRAKBALL INTERFACE

If you have an un-used IBM bus card handy, it can be used to construct a plug-in box which will allow the use of any other bus controller (i.e., mice, trakballs or pen mice) without having to perform further modifications to equipment. The Microsoft Bus mouse comes with an 8-bit ISA Bus card; if the PC Bus mouse you obtained did not come with a card and you do not have another, you might try obtaining just the 10-pin Bus jack from an electronics supply store or via mail order.

My box uses the card that came with the Microsoft Bus mouse. If one bends the metal bracket on the card parallel to each side of the circuit card and cuts the circuit card at the bracket ends, the resulting card will fit into most small electronics project boxes of about 2" x 2" x 3". I took the resulting card to a local Radio Shack and found a box that would fit for under $3.00.

Place the card into the box and determine where to drill two holes: A big one for the PC Bus mouse to plug into the card, and a smaller one for the mouse cord which will plug into the Atari.

Once the holes are drilled, use an ohmmeter to determine where, on the "chopped" circuit board, the pins of the jack can be accessed. This allows for easier connecting of the Atari mouse cable to the circuit card. Ideally there should be a row of un-used solder pads on the top of the circuit board, near the jack, which can be used for this purpose. Keep good notes and/or label the solder pads so you know which ones lead to which pins on the bus jack. Also keep in mind that the pin numbers on the jack are mirrored left-to-right, as compared to looking at the bus connector on the mouse itself.

Thread the end of the cable which will be leading to the Atari connector through the small hole in the project box so that the plug is outside the box and the leads are accessable within the box. Tie a knot in the cable about three inches from the ends of the leads to prevent the cord from being pulled out from the plug end.

Solder the appropriate wires of the Atari cord to the solder pads on the circuit card which match the proper pins on the Bus connector. Before connecting the box to the Atari for testing, double check all connections my using an ohmmeter, making sure the PC Bus pin-to-Atari

pin assignments are correct.

Test the box by plugging the Atari connector into the computer and the Bus mouse into the jack of the circuit card, making sure to test all functions (left/right/up/down cursor; left/right click). If there's a God in Heaven and all is right with the world, everything will function properly. If it doesn't, take a look at TROUBLESHOOTING below.

Once you've verified that all works well, place the ciruit board in the project box so the mouse connector lines up with the hole drilled for it and hot-glue the circuit board in place using plenty of glue along the edges of the metal bracket. Pull the mouse cord to the Atari connector so the knot in the cable is placed against the inside of the project box, making sure the leads to the ciruit board aren't being stressed, and hot glue that in place as well. Before securing the lid to the box, make sure that the PC Bus mouse easily plugs into the connector in the box. Then secure the lid to the box, and you're good to go!

You now have an interface that should let you plug any standard PC Bus mouse, trakball or cheese grater directly to the Atari without any further modification. In other words, you won't have to do this again and won't have the excuse again later, so you might as well sit back and have that beer now.

TROUBLESHOOTING

Those making an interface box will likely experience the most difficulty, as it is easy to lose track of where on the circuit board one can make a good connection with a particular pin on the connector. Being careful and meticulous and using a "paper brain" will help avoid problems later on.

The first thing to do, of course, is to check all connections to make sure the correct pins are connected to each other, and check each connection to make sure it is electrically secure and complete. If this fails, try using some of the tips below, which is basically the same advice in table form: ;)

Symptom	Probable Cause	Solution
Mouse cursor movement reversed (left moves to right, up moves down, etc.)	XA/XB or YA/YB signals reversed for horizontal, YA/YB to signals for vertical problems.	Reverse XA/XB signals
Mouse cursor movement really hosed up (left moves up, up moves right, etc.)	XA/XB and YA/YB signals connected to wrong pins	Ensure XA/XB and YA/YB signals connected to proper pins as per PC Bus/Signal/Atari Mouse table

Right or Left mouse Signals not connected Check pin-to-pin
button does not work. _or_ are reversed. connections for mouse
This can be checked button signals; Check
by trying each button to ensure Lft Btn and
as if it were the Rt Btn signals are

pin-to-pin con-
nections.

All else fails. Did not try, or did Try; Try again.
did not try again.

Set forth in electronic text for all posterity this 29th day of May,
1994, for the edification of the masses and to while away a few moments
that would otherwise have made up a dull day,

Michael Parrott
mparrott@hebron.connected.com

Many thanks to everyone who's ever written anything whatsoever about
modifying a bus mouse to work on an Atari computer, whether in textual
or graphic format. I've tried not to draw directly from any other source
for this file, but have surely been influenced by other information I've
found on the subject, so thanks to those folk, whomever they may be,
are definitely in order. So there.

Hi,

I am using my Atari to do everyday word processing for my work at home. Anyway, I need a very small program that is probably on Genie but, not on the net. It is called INSDATE.LZH and it allows the inputting if the system date at the cursor position for wordprocessors that don't have that feature. It's only about a 4k LZH file.

It was also located on the old CodeHead BBS if anyone has it from there. Anyway, if anyone can help it would really save me. You could attach it to an e-mail message if you have it and send it to my friend at:

r.johnson@support.com

Thanks,

Paula

PS: Also, someone said it was in the Suzy B's catalogue.
Again thanks.

3387. Need info on Falcon HW upgrades

I know I saw a URL on here somewhere for the people who make
the BlowUP FX board for the Falcon but I can't find it now!

Could someone pleas post this URL again and I'll write it down
this time! :)

I'm looking into upgrading my Falcon and am trying to figure out
which is the best one to go with.

I'd like to hear from people who have already gone through this
and what their experience, advice, problems and or satisfaction
they have had with their particular upgrade.

I'm interested on speeding up everything & getting better video.

Why didn't Atari make the Falcon 32 Mhz like the TT? I don't
understand why a newer machine would be slower than a older one.

Thanks to all who reply,

Regards,

Brian

Source record: 139241

I'm contemplating getting a TTM194/Moniterm Viking for a PAK'd MSTE
(if I can get one) to run with a Matrix graphics card.

One question:
Apart from the 1280x960 x2 resolution - can it be used in other
resolutions? i.e. 640x400 Hi Res for compatibility, and perhaps
medium res (using greyscale for colour).

I checked CIS, but there are no new drivers or patches. There are a couple of other programs for large monitors (Monster Mon for example), but I am having the same problem.

Someone on CIS told me that since I am using an accelerator board, I must make a modification somewhere on the board. However, he hasn't gotten back to me yet.

DOES ANYONE KNOW WHAT KIND OF MODIFICATION IS NECESSARY????

(I am using AdSpeed)

Jim,

You don't mention if it consistently works on the first boot from the folder, as from some very troublesome lockups I've had, only a complete powerdown will clear it.

My first instinct is that perhaps when using the shortcut, the proper directories aren't open. Maybe you could save the desktop with the active window already open to the cubase dir, or make F1 open the folder and F2 run the prog. Of course, I could be just shooting at flies here.

Or, is there a way to make sure that the installed icon has a valid work directory of x:\cubase\whatever? You might want to consider one of the nicer boot managers like XBoot, SToop, SuperBoot, etc.

I've been using SToop on the Falcon, and while I'm still learning its idiosyncrasies (it's like a miniature desktop itself), it does have quick keys, assignable to F1-10, that I believe will lauch a particular configuration and program, to the best of my knowledge.

Kind of roundabout, but if the desktop can't do it, add something that will.

Just a few trigger pulls with no lights.

Hi Jim,
I use the F1 key to open CAF on my Falcon all the time. It souinds
like you haven't set the install application features correctly for a
desktop icon. Click on the icon, open the install application dialog
(under the options menu) & change the default dir from top
window to application. That's all there is to it. Now if I could just
figure out how to drag & drop .ALL files to the CAF icon to load
both...

Jeff Hepp wrote this to All about ZIP Drive:
JH> Just inherited a SCSI Zip drive. Is anyone successfully using
JH> one on an Atari STE? If son what additional hardware/software
JH> will I need to get it running? TIA. Jeff.

Hi Jeff,
I know several people using the Zip with ST's and STe's.
What you need to be able to use it is a SCSI-interface, like the Link-II or Link-96. To make full use of it, with write-protect and such things, you also need HDDriver. If you don't need any other features than an ordinary hard disk has, you can also use HDX/AHDI as driver (you need the patched version of AHDI that doesn't stop searching for SCSI-units when it can't find SCSI 0).
If you don't have another external hard disk connected after the Zip, you'll have to get the termination power from a port in the computer and provide it to the second SCSI-port of the Zip.
If you need instructions for this, send me a mail and I'll find out.

Best regards,

Claes

Too bad, I thought that if any new remake of MidiMaze for the ST would be
made as a shareware game. I've had this sort of idea forsome time, make
it somewhat resemble a Doom-like game and such. Of course it would have
to have a different name and maybe replace the smilies with something
else to that effect. Maybe someone can actually work on that or something...

> >BTW, did Xanith also do work on Faceball 2000 for the Nintendo systems?
>
> Yes, though I was not involved.

Actually, seeing the reviews for it made me want to get MidiMaze since I
finnaly have a ST at the time :) I got the official game some time ago
and it is great to play even now. The German copies were very
unplayable. :(

I don't know if this would help, but to access that I type
ftp://ftp.cnam.fr/ under the Lynx browser and it does work well.

Of course I rely on Lynx instead of using the good ol' FTP because a.) it
makes selecting files easier b.) I can just download straight to my
floppy and c.) I couldn't get the FTP on my ISP to work :)

I was also confused on this point until I realized that Oasis uses
the defaults specified by your control panel (or XControl).

I can't believe that this was left out of the docs but I couldn't see
it anywhere either, simply you've got to use the control panel and
Modem.CPX

I have a Falcon with MiNT 1.12MH. When I've loaded it before hand, I
still seem to have serial port problems. Even at 14.4, the port seems to
lock up when I get a heavy stream of data, for example. Any ideas?
Thanks.

>*.au?

Long Play Sample (LPS123.TTP) will play both .wav and .au as a helper app for CAB. Works under MiNT, but I once checked running processes with PS.CPX after using it and it leaves something listed as "zombie" each time you run it. Each seemed to have a memory usage of 0 bytes and I couldn't get rid of them. As I'm not that clear what a zombie is, it might pay to check it out first. The program works like a charm under single TOS.

There are _physically the same files there:
ftp.cnam.fr/pub/Atari & sunsite.cnam.fr/pub/Atari

The /pub/Atari on ftp.cnam.fr is 'just' a NFS mount. Files are
physically on sunsite.cnam.fr

> I'm not really sure what I should put in my upcoming FTP site list- *both*
> cnam sites plus the mirror? Does anyone know if the sunsite is a permanent
> thing, or was it just a temporary site when cnam was down?

Just use ftp.cnam.fr and perhaps the mirror.
The sunsite server is permanent. The convenient link from ftp.cnam.fr
to sunsite.cnam.fr has been killed when ftp.cnam.fr had to be rebooted.

Fabrice.

Two ways to handle this:

1. Format a 720K disk on the PC and copy the files you want to it, then pop it
in your STE and read it.

2. Get Ghostlink, connect the STE and PC via serial ports, and access the CD as
a (slow) STE peripheral.

RG> V.1.09. I works great to record audio cd's, but when I record
RG> data/backup the cd's will be unreadable.

Hi Ronny,
When backing up data, you should always run the "use image" option, otherwise you'll get problems (you'll need enough free space on a HD to hold all the data you're about to burn). Also don't forget to set the "close session". I don't know what you've tried, but ask me more if you need.
There is an upgrade available to version 2, which has a different layout and handles multi-session correctly, which the 1.0x doesn't.

Best regards,

Claes

There's a tiny hole somewhere on the map iirc - just a single black
pixel. It took me ages to find that and stick the flag in. I then got
stuck in the next room and gave up.

If you happen to get past the next room let me know!

Hi Ali Here,

My modem is a Supra-FAX-Modem V.32bis. Sounds like it's not just the
`Trust' modems that are having problems....

Hmmm....

>
>Everyone doesn't have the low mental abilities you obviously have, so it's not
>always correct to judge others by yourself...

Despite of your bloated self image you are still an idiot. Not only
are you an idiot but, you are the sort of idiot who harms the rest
of us by what you are willing to tolerate.

>If you would write a program and don't have another job to go to, how would you
>get your money to buy the food? By selling one program and allow anyone to copy

And just how, oh mightily brainy one, does this even remotely address
the point that software protection only encumbers YOU and those like you?

>it? That would be ok for someone that makes programs in his spare-time, but not
>when it comes to a company that has employees to pay for making software. Some
>sort of copy protection is absolutely needed - otherwise there would be no
>limitation of the illegal copying at all.

This might be true in whatever fantasy world you live in. However,
in the real world: pirates cut through copy protection as if it
weren't there. To the thieves, copy protection provides NO barrier.
In the end, only users like you loose out. Yet you bend over and say
ahh and delude yourselves into thinking that the lack of respect that
developers show you is actually the fault of 'pirates'.

>Continue to copy all the programs you need - who is there to stop you? Just
>remember that YOU are one of the people that make the Atari line of computers
>and the software for them go towards the grave. Another item: If you make

With such a mentality, it is little wonder that MIDI musicians need
dongles to keep themselves in line.

Atari killed Atari. Yet again you attempt to deflect the insults
implicit in MIDI developer behaivor upon someone else.

Pirates only nullify their own existence in the market.
Not advertising properly for a decade, destroying their dealer
network, pricing subsequent hardware obscenely high, and choosing
to concentrate on a games console are the sort of things that
destroyed Atari.

Blaming Atari's faults upon a few game copiers only covers up
your blunder in trusting AtariCorp to be a reasonably sane vendor.

>pirate copies, you become a criminal. Have you ever read the users manual to

Actually, I become subject to civil litigation. If you are going to
potificate upon the law, you should at least know it.

>any program? Do you even have ONE original program? It says quite clearly that
>it's illegal to copy the program for any purpose - but people like you would

1) You're confusing software with videotapes.
2) Anything a publisher will tell you about the law will be
self serving and quite probably wrong.
3) I most probably have MUCH more 'original' software than you

>probably never care anyway... Just go ahead and send the software producers to
>bankrupcy, since this seems to be of little interest to you - you probably
>don't intend to buy any software anyway. If it really is of that little

You should review libel laws. Someday they will likely bankrupt you
at the rate you're going.

>interest - why do you bother at all -just throw the computer away and away goes
>your problems with it (and all the legal users' problems with you).

No, I'll just get off my moral 'high horse' long enough to obtain
a crack to deal with the problems that plague excessively pompous
users such as yourself.

>Oh! You say the programs are too good to get rid of the computer? Well - if a
>program is worth using - it's worth buying, isn't it?
>Otherwise you have no legal right to use the program!!!
>I hope I've made my point quite clearly.

Too bad your little tirade had nothing to do with mine.

Copy protection DOES NOT stop pirates.
Copy protection only inconveniences people like YOU.

No amount of insults slinged in my general direction will
change this.

Meanwhile, you'll let your moral pomposity get in the way
of your use of legitimately obtained software.

WE will not.

>Rebooting once resulted in the same errors, but after re-booting AGAIN,
>Drive J: seems to work wonderfully and Diamond Edge disk test reports no
>errors.

It seems like an error i had a while ago. I had the same symptoms.
All of a sudden it reported the "Data on drive J could be damaged".
But when rebooting it worked again for a few days.. Then the same thing happend
again.. After hours of testing with Diamond Edge and other programs i found no errors
and it worked for a few days again.. But then, the same errors one more time, and i
decided to open the drive case.. i found the problem.. One of the cables was badly
connected and was about to fall off.. It was sitting on the edge of the connection
on the HD, and therefore it worked sometimes, and sometimes not.. I just pushed it into
right position, and after that i have had no troubles.. Maybe you have the same
problem.. Or try to clean the cable connections on the hd.. There can be a bad
connection..

The best 'trick' is using better, more capable display hardware (higher
color
modes), and using software that is capable to benefit from it.
Just my opinion, your mileage may vary :-)...

Guido

3433. Stuff for sale (clarification repost)

Newsgroup: comp.sys.atari.st
Date: 1996-08-28 00:00:00 UTC
From: troyc@bnr.ca
Message-ID: <501g4i$nk6@batph8.bnr.ca>
Source record: 139171

Let me repost this since there seems to be some confusion on some things:
First, all prices are $US, even if my email address implies Canada.
Second, the TT system description changed...The 40 meg HD offered cannot possibly hold both Atari software and a FULL linux installation. That sentence should have appeared with the $500 price.
Third, I have tried to make this add accurate, but please excuse any minor inaccuracies (see my second point as an example).

I have an Atari TT030 for Sale:
Motorola 32MHz 68030 + coprocessor
8 Megs Ram Total (4/4)
40 Meg Quantum Harddrive
1.44 Meg Floppy
TOS 3.06
External DD drive
Great TT style Keyboard

ST Users take note: This machine requires a VGA monitor.

$400 Firm, split shipping. If you are reading this outside North America, Shipping is NOT included (I tried to restrict this post to NA, but some of the queries I have gotten implies it went further than that!)

For $500, I will replace the 40meg HD with a Quantum 720 meg hard drive with a full Linux 1.2.13pl10 setup and offer FREE shipping in North America.

Misc for sale, prices DO NOT include shipping. Make offers (except for items marked "firm), everything must go because I don't want to lug it when I move:
Atari SC1224 Monitor $50
Spectre GCR + disks $50 ($40 with purchase of TT)
PC Ditto II (hardware + disks) $30
Everex 2400 Baud Modem $15
Avatex 1200 Baud Modem $10
Various Joysticks $10 each
Atari Mouse $10
sQuick mouse $15
Atari Trakball w/left button $15
TOS 2.05 $10
NEC Multisync II VGA Monitor $40
NOTE This monitor has sync problems when cold. That's why it is so cheap. If you can fix monitors, then this is for you. Very crisp picture when in sync. You have been warned.
Caveat Emptor. ***NOTE***

Jeff
hardware
All you need is some sort of SCSI interface such as the Link 2. If you already have a hard disc on your STe then you will have something like this. I will also point out then to enable hard disc and Zip to co exist you MUST have a VERY good cable to connect them. I spent a morning at Hisoft with them scratching heads over why my MiniS 127Mb and Zip wouldn't talk. In the end they found a Mac scsi cable (which could be used for tying up the QE2). Its the only way it worked. Since then I've had no problems.
software
If you get the Link you will get a set of progs which can be used to format, partition, define boot disk, etc etc This is a useful util pack. I can recommend the Link 2

>makes selecting files easier b.) I can just download straight to my
>floppy and c.) I couldn't get the FTP on my ISP to work :)

Yup- I just tried the old site again and it worked, so now it seems like
there are *two* identical cnam sites, plus a mirror site in Spain.

I'm not really sure what I should put in my upcoming FTP site list- *both*
cnam sites plus the mirror? Does anyone know if the sunsite is a permanent
thing, or was it just a temporary site when cnam was down?

I have these 3 sites which I've checked:

ftp.cnam.fr /pub/Atari (IP 163.173.128.15)
sunsite.cnam.fr /pub/Atari/ (IP 163.173.129.5)
ftp.gui.uva.es /pub/atari/ (IP 157.88.36.190) **Mirror site**

As for FTP software- what are you using? I used to download using "ftp" in
UNIX, but now I use "ncftp" which is a lot more user friendly.
It's worked fine with me.
As with downloads directly via Zmodem- I haven't had any good experience
with that. Can't remember why- either the name of the file came out wrong
or it didn't transfer properly, so what I use now is "save to disk", which
saves it to UNIX and leaves me to Zmodem it afterwards.

there
>now will still be there if you use the program (I don't have ICD, so I
never
>had to use ICD2AHDI), so back it up if you can. HDDriver is great, and

>worth the trouble you're having.

Now: Me again.............
Back to you - Uwe,
Hhhmm... (no pun intended).. the termination thought makes me wonder, even though the Jaz went 'inbetween' previous SCSI devices - perhaps I didn't remove termination from the JAZ before install. Will check to make sure. Clock patch??? I'm not exactly sure which you mean - I have HSMODEM installed but had previously removed BCONMAP & FPATCH2 because of getting HSMODEM a bit ago. Are any of those what you are referring to??

Back to - Leslie,
When I got the Jaz, I purchased an extra cartridge so I wouldn't destroy the IBM PC software on the Tools cart. But the new cart said it was for Mac - so I used ICD Pro to reformat then partition it. I believe I did check it for AHDI compatibility - I will check it again. Thanks for the note on the ICD2AHDI archive - will see what that may do for me after I recheck my hardware setup.
(Thanks to having the Syquest 270Mb removeable - I have backups of data already)

Thanks very much for your comments, folks. It may take me a day or two to let you know what my results become. By the way, I also believe that HDDriver is what I've been hoping for - for a long time. I can already appreciate the pickup in response times I've seen so far - even coupled with Tcache 6.4.

>me in the right direction ??

Use HSmodem to lock the port and set it for M1EMU in order to make NOS
think you're using AUX: - you change the port speed in your STARTUP.NOS
where the line is that says something like:

xxxx xxxx xxx sl0 xxx 19200

Look for the "Ess Ell Zero"; the last item on that line is the port speed.
NOS will complain that anything higher than 19200 is invalid; ignore the
error message.

3438. Mini Atari Poll. Read this. Important

Newsgroup: comp.sys.atari.st
Date: 1996-08-28 00:00:00 UTC
From: "K. Ellis" <kellis@primenet.com>
Message-ID: <Pine.BSI.3.94.960828203826.1377A-100000@usr06.primenet.com>
Source record: 139176

Hello! Atari users.
I would like to create a mini poll about Atari computers especially
about Atari users.
So I would like to ask you a few questions. You can send your answers to the
following address. kellis@primenet.com
PLEASE, cut the message util the questions.
I know this mini-poll will be a little restricted because most of the Atari
users who are on internet will see this message.
So I hope that if those users know some other Atari users (non hooked),
they'll take the information and fill the message with their friend's
information.
This information is confidential and stays between me and you.
I don't care if you have cracked software. The purpose of this poll is
not to find the hackers, but to find what atari users need the most.
Like that we'll know what the atari situation is. And maybe the
programmers could be closer to the Atari users and their needs.
Fill the [ ] with x.

-You have an Atari:

st[ ], ste[ ], megast[ ], megaste[ ], TT[ ], falcon[ ]

stacy[ ], portfolio[ ], tt compatible (medusa, directT etc)[ ]

Mac+magicmac[ ], PC+magicPC[], unix+stonx[ ], other[ ].

-what memory configuration: Mb

-what accelerator:

-what screen: monochrome[ ], color[ ], TV[ ], (S)VGA[ ].

-did you add a graphic card:[ ], if yes, what resolution can you get:

-Do you have a hard drive:[ ] , if yes what size:

-what software do you use the most: (even cracked, but don't
say it if so)

-what OS do you use the most: TOS[ ], Mint[ ], Magic[ ], Linux[ ] other[ ]

-What is your main occupation with your atari:
DTP[ ], Midi[ ], Graphic[ ], Internet[ ], Word processing[ ], Database[ ]
Programming[ ], Games[ ], Audio recording[ ], Video editing[ ], Other[ ].

-what do you consider the best shareware:

-what would you like to have on your atari:

-What program would you like to buy if it was better than it is:

-What's your name:

-how long have you been using your atari:

Ok that's all. Thanks for your time. If you want to send some extra
comments about atari the fill here.

Is this version now Magic 4 compatible? I had enormous problems with v6.6 ...

3444. Link help needed

Newsgroup: comp.sys.atari.st
Date: 1996-08-28 00:00:00 UTC
From: kslate@mtholyoke.edu
Message-ID: <502cg7$fff@news1.mtholyoke.edu>
Source record: 139182

[Article reposted from comp.sys.atari.st.tech]
[Author was Kevin Slate]
[Posted on 28 Aug 1996 21:06:05 GMT]

I could use some help with an ICD link on a Atari STe. I just purchased a used Link to install and can't get it to work. It came with just the software and the link.
I'm trying to use it with an Conner 180 meg SCSI drive and ICDBoot does not recognize either the ICD Link or the Hard drive (Link or host adapter not found).
Should the Link be recognized by the ICD software even if the Hard drive isn't?
Should the resistor packs on the Conner matter? The drive is in a external case and I've tried it terminated and not terminated with the same results.
I have tried changing the drives SCSI id thinking that there may have been a conflict but this did no good.

Any ideas? What am I missing?

>Regards, Derryck

Hi Derryck,

My modem is set to go silent once a connection is made, but I don't get
a connection, the modems just stop `talking' to each other. I never
reach a point where they agree on a protocol and start exchanging data.

3448. Q: ZIP drive on ST...what do I need?

Newsgroup: comp.sys.atari.st
Date: 1996-08-28 00:00:00 UTC
From: brost@synnet.com
Message-ID: <19960828112300404300@thomas_radogna_mac.synnet.com>
Source record: 139186

I have a ZIP drive for my PowerMac (used for backups only) and was thinking it would be cool to also use it with my 1040ST, which has no hard drive at all and is used strictly for MIDI sequencing.

I know I can buy Link to get the SCSI connection, but what about software drivers that will let me mount and format the ZIP disks themselves? Iomega obviously does not offer them. Are there any shareware or commercial solutions to use a ZIP with my ST?

E-mail reply preferred; pointer to a FAQ is OK.

From what I hear ftp.cnam.fr is just a smarthost and in fact connects
you to specific machines, and for a while the link was broken ie when
you access ftp.cnam.fr for the atari stuff you are actually connect to
sunsite i'm not sure but just check to see if the ftp address works
again and if so just add that. I'm open to correction of course :-)

I for one sure wish you or someone would write such a program. I have looked high and low for one that fits my requirements. I even bought Lattice C with the intention of doing it myself, but after almost a year, I am no C programmer.

You mentioned a couple crucial requirements, but for what it's worth, here's my full list:

1. playback _only_ of
a. AVR
b. WAV
c. AU
d. AIF(C)

2. 8 or 16 bit capable

3. stereo capable

4. gem-clean (runs under tos or magic or multitos)

5. AV protocol aware (A MUST!!!)

6. does not draw a window, dialog box or anything else on the screen! Just plays the sound!

7. for samples with non-atari frequencies, should re-sample upon loading, then play it.

8. works on a falcon.

9. clears the buffer, so I don't hear remnants of previously played sounds (a problem I have with 16-bit sounds in snd_play by Richard Kurz and SAM by Scott Sanders.)

10. does not turn the keyclick off (or if it does, turns it back on after playback is done playing) (a problem I have with bng_play by Vanel Remi.)

I was willing to pay US$275 for Lattice C just to get this program on my hard drive, so you can easily guess I would register someone's shareware offering in a second.

Please?? :)

Well, it can't be TOO much easier than on a Mac since all you have
to do is connect it and boot the computer! On the Atari you do need to be
sure your host adapter (on non-TT's) supports parity and that SCSI ID 5 is
not otherwise committed.

Yes. It's called MS- or PC-DOS. Or, under Windows, use WinFile or
Explorer (depending which version of Win you abuse yourself with).

The DOS command is "copy" - Windows copy is drag and drop.

If the PC uses Linux or similar OS, the command is "cp"; if it runs OS/2
then you can run the usual Windozzzze utils.

: At a recent meeting of a local Computer User Group (WAUG) a member
: reported that CAB and Mintnet can be used with a PPP account.

: Has anyone had any luck with configuration?
Yes, and it works very well. I've had almost no problems.
: What does it take to set this up?
If you can get advice from other people, it's quite simple. Installing
without asking for help can be tricky :)

What you'll need:
A fast computer with lots of RAM and a hard disk. Four megs or more is
best, but you can probably get by with two.
Version 1.12 or later of Mint
MinixFS
MintNet (latest version is 0.90, but versions 0.60 and on worked fine for me)
CAB-for-MintNet overlay
CAB, of course

Stuff that comes in handy:
MintOS
Various UNIX-y file utils
A multitasking AES (AES 4.1 works for me)
NVDI or other font scaler
640x400 or larger screen

Refer to the MiNT/MintNet install page at
http://www.gti.net/azog/atari.html
which should get you well on your way. Feel free to email me if you need
more help.

: programing... you don't want to try setting up Mint.

That's not really true. I have a (relatively) completely working MintOS setup, and I haven't had to do any programming or compiling at all. In fact, I don't have GCC on my system, and only recently installed SozobonX. If you're capable of using a UNIX shell and of editting text files, you can set up a functional UNIX-like multiuser system capable of running X Window or a multitasking AES.

3468. <<>> SIMM's: What type for basic 1040STe upgrade to 4 meg???

Newsgroup: comp.sys.atari.st
Date: 1996-08-29 00:00:00 UTC
From: graphic@delphi.com
Message-ID: <R5ORylk.graphic@delphi.com>
Source record: 139013

I want to expand my 1040STe to at least 4 megs using the built-in
expansion SIMM sockets.
Is 120ns the minimum speed that is actually utilized by the STe?
I often see 80ns or even 60ns SIMM's offered and I realize that the extra speed
is probably a waste, but they seem more available than 120ns and if priced
right......
Again, if the price is right, can 4 meg SIMM's be substituted without causing
a problem, in place of the 1 meg SIMM's that it was originally designed for?
would a 4 meg expansion using 4 meg SIMM's (I know it's overkill) require a
single 4 meg SIMM or would all 3 expansion sockets need to be populated to
have everything work correctly (13 meg in place to get an effective 4 megs)?
How many pins can be on the SIMM's? Seems like I heard that there are
2 types of 1 meg SIMM's: An IBM "flavor" with 8 256kchips on board and
a Mac "flavor" with 9 256k chips on board. I heard both variations
work in the STe sockets, but this alledged "fact" makes me wonder if
there are different SIMM pin arrangements that I need to be concerned about.
Any help is greatly appreciated.

> if it is for B&W and/or for "false" color shadings of the same color or actually
> will show a full color frame.

I have version 1.29 (1990), and it is semi-colour. That is, it uses about
8 colours at a time, and saves in Degas or NEO format. There was (is) a
further hardware item which makes three passes with different filters, and
supposedly saves more-nearly-true colours.

Version 1.29 will also operate in mono, and dithers to 16 registers. I find
it works best to grab & save in colour, then translate them with Touch-Up
into b/w, if I'm going to use them for DTP, etc.

> 2) Vidi-ST version 12 (no decimal ---- the "12" stands for 12 bit color
> capture) and this owner claims this is the latest and greatest version.

I never heard of this one--I was told Rombo stopped supporting VIDI-ST
shortly after my version.

> Only old magazine article I found warns that the original version only
> was capable of "false" color (e.g. red only) renderings of the shades on
> a grey scale.

This must have meant something before 1.29.

"There ain't no sech animule!"

Lynx will allow you to brows using a shell connection, but there are no graphics. You must have a SLIP/SLIRP, TIA, or PPP connection to get graphical web pages on /any/ system; on the ST, you have the choice of SLIP (with CLSIP coming Real Soon Now <tm>) under Single TOS, or SLIP/CLSIP/PPP under MiNTnet. My SLIP connection on the ST is the only thing that has saved me at home for the past 2 weeks, since my ISP "upgraded" his OS - the PC can't get email under PPP using Trumpet with Eudora or Netscape anymore, and even NOS/POP3 on the ST isn't pulling in the mail, while Antmail is chugging along just fine, thank you.

My personal feeling is that if your ISP doesn't offer uncompressed SLIP, you ought to look for another provider - the one you have obviously doesn't want to bother with providing good support - he'd rather have you go buy an expensive commerical package to access his system, then let you call the publisher of that package for support. That's my opinion as a former Netscape tech support rep as well as my personal opinion, BTW.

The only think I can think of is that your drive has parity enabled
the original link did not support this, keep termination on if it is
the last or only drive. Configure the ICDBOOT.PRG to make sure that no
drive IDs are being skipped then run it. I am assuming of course that
the drive has been formatted and partitioned for an Atari...

j> any difference. Maybe my Falcon just has a flaky serial port?

Oops, sorry Jared, i forgot the driver ;)
You must have it in your mint/multitos directory (it's 1701 bytes). This
driver gives a feedback when loaded saying 'HSMODEM2 installed' and 'HSLAN
installed' for example.

BTW, a size of 256Kb for the buffers seems a bit high. Mines are set to
16384b for receiving and 8192b for sending. DON'T use the serial.cpx with
HSModem, use fserial.cpx instead.

Any driver that supports removable media will do. I you want to make use
of the password based read/write protection of the ZIP drive you should
have a look at HDDRIVER
(http://acp5.chemie.uni-kl.de/hddriver_english.html).
Note that HDDRIVER in the current version doesn't support formatting.
The new version 6.0 will be available in about two weeks and will
support formatting as well as DOS compatible partitioning.

Hi,

For sale in The Netherlands:

Falcon030, built in Lighthouse Tower, 200W Power supply built in,
(ready for a bare SCSI2 HD. One is actually built in, but I want to
keep that.)
65M Conner IDE 2.5" HD
BlowUP FX board, 40MHz, 4M FastRAM (so total of 8M RAM)

Original software:
Turbo C 2.0
Pure C 1.1
NVDI 3
N.AES
Lots of shareware. Complete MiNT setup, complete TeX setup if
required.

Books:
`Het complete ATARI ST boek', Sybex
The Atari Compendium, 2-part version

Everything together HFl 1195,- (US$ 685,-, DM 1045,-)

Mail me for more information.

Regards,

Alternatively, you can use Mouse 2.5, a serial mouse driver. This works with
any Microsoft compatible serial mouse, and can use the middle button
as either a real middle button or to act as double click and other actions.

I think this program is Freeware, but feel free to correct me if I am wrong
on this.

hello,

as i was considering a replacement for aes to use
under mint, i got a message about XaAES Beta 5,
with a pointer to http://www.i-way.co.uk/~c_graham/files.html
which appeared invalid.. :<

has anybody found a way to grab it, is there an ftp site
holding it ??

while i'm at it, could anybody give the minimal config needed,
Tos version, Ram size and what desktop can be used - will
Thing or Gemini fit ?? (will a 4/30 megaST be OK ??)

TIA

fab.

Is there a Shell web browser that works like cab and let you see pictures
and stuff? Is so where can I get it and how well does it work and look?
Does it handle color and so on? Thanx for any info you can provide.
--
Drop in some time. (http://www.panix.com/~smooth1) I'll be glad to see ya.

>>Can someone sent me some details?

If you have a spare machine and a leased line, or some kind of permanent
connection to the internet, then you can. But depending how much use
your site gets, you may need a very powerful computer.

If you use a Unix system (MiNTNet, Linux or NetBSD on an Atari TOS machine)
you should be able to just use ftpd ftp server.

I have this running on my TT030 under MiNTNet and it works very well.
You can also use an http server such as NCSA HTTPd or CERN HTTPd on a similar]
setup if you want a WWW page.

Sounds like whoever you bought it off of didn't send the right version of the ICD software! Since the Link doesn't have the ICD clock in it, the "regular" ICD utilities wont recognize it as an ICD host adapter! You need either the ICD link software or the ICD PRO version. Unless you can get them off of the person that sold you the Link, I think you may end up having to pay for them. Try http://www.icdinc.com and leave e-mail there!

Once you have the right software, then it will make a difference whether the drive is terminated or not! If it is the last or only SCSI drive it should be terminated.

Imagecopy 4, JML snapshot and the good old snapshot accessory just to
name a few.
Imagecopy is a commercial packet which besides screendumps can do much
more. It's also an excellent utility for printing mono and color
graphics. You can use it for converting graphics from one format to
another.
Imagecopy can be obtained from
FaST Club
PO Box 101
Nottingham
NG2 7NN
England
E-mail: stclub@cix.compulink.co.uk

JML snapshot is a German shareware program. It's like the name says a
snapshot accessory. With JML snapshot you can save the snapshot to
disk into three formats (X)IMG, IFF and TIF. Very nice utility. I
don't know if this prog can be found on the net. (I've got it directly
from the maker)

Snapshot.acc can be found on any well sorted Atari ftp-site. It can
save screendumps on disk in (X)IMG format I believe.

Hope this help

LPS123.ttp works fine under Mint indeed. After reading your message
I've checked the running processes with Xtask and yes LPS.ttp seems to
leave sometime each time it has run.
As a complete Mint dummy (I'm using Mint but that's all) I wonder if
this could do some harm. Has someone an idea about that?

The Smooth One (smooth1@panix.com) wrote:
: Is there a Shell web browser that works like cab and let you see pictures
: and stuff?

By shell, I assume that you are loggin on using comms software like Freezedried, Connect, Stalker, etc. and using the Lynx software resident on your server's machine(s). By it's very nature, shell access is TEXT ONLY, and if you can access Web pages from it, you will only see the text portion, and whatever text the page author has inserted to be displayed in lieu of an image (most of the time this means, sadly, [IMAGE]).

If you want Web access with pictures, you have to go with STIK/CAB, or MINT for the Atari machines -- so far, Bill Gates has decided to ignore us so there is no Microsoft Browser available, neither is there Netscape.

Why don't you try N.AES. It's runs very smoothly with mint but
AFAIK you can't find it on the Net. If you want to know more just pay
a visite to http://www.overscan.com
N.AES comes with a special THING desktop but Gemini will work too. It
runs on every Atari (dixit the programmer)

Hope this help.

>
>I never heard of this one--I was told Rombo stopped supporting VIDI-ST
>shortly after my version.

GET VIDI ST (12) If you have the option, its miles better, you can
grab screens from your telly or video in full colour, supports 16 or
256 colours, spectrum 512 colour, you can even grab true colour or
whatever, but you need a viewer as vidist will grab it but not show
it...unless you have a falcon of course:)
But no extra needed, you can grab colour shots straight from source,

Video? well I think it only grabs the video in 16 greyscales,

I havnt got my copy now as I needed features only videomaster could
offer, but for colour grabbing without any set up hassle or extra
hardware, you need VIDIST (12)

No idea where from or how much or anything other than the above, but
the above is true as I used to own one :)

Cheers.............!ynoT

If the thing doesn't come with the VIDI-RGB adapter (which plugs into your printer port, I beleive), then it's monchrome only. I have the VIDI-ST, and it comes with some cellophane filters which, when used with a video camera and a still image, will allow you to make your own color captures, but it is by no means color all by itself.

I don't have it and have no use for it.
However, some of those here who do have it (or perhaps it was
other similar packages) HAVE complained about the dongles.

Furthermore, the comment was general and not limited solely to Cubase.

If Cubase is one of 'them dongled programs' then you, in effect, 'bent
over a said ahhh' when you bought it for putting up with such lack of respect
from the developer.

>quite happy with it.. I feel, well, unencumbered! You, on the other

>> Copy protection only inconveniences people like YOU.
>
>Once again, the only one here who's inconvenienced is YOU. You don't
>have Cubase.. we do. 'Nuff said, genious.

Fine, if you like dongles, like disks you cannot make archival
backups of, and like packages you cannot install to a HD, then that is your
sick twisted little business.

Some of us would prefer not to be treated like thieves when we buy
software and put money in some developer's pocket.

Copy Protection does not obtain it's stated goal. The only sort of
person it will ever be there to encumber (whether you'd care to admit to this
or not) would be you.

>
>Now, school is starting, so get back to 6th grade.

If this is the best you can come up with it is little wonder that
piracy is still rampant.

3502. GEMULATOR DEMO at www.emulators.com

Newsgroup: comp.sys.atari.st
Date: 1996-08-29 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <5050c8$2to@news1.halcyon.com>
Source record: 139083

First of all, Branch Always Software now has a new name:

EMULATORS, INC!

We also have a new web page at:

http://www.emulators.com/

But don't worry, we're still the developers of Gemulator, the de facto Atari ST emulator for PCs that a few people have unsuccessfully tried to clone lately. Well, I'm happy to announce that earlier this summer we released Gemulator 96 version 4.15M and next week, by popular demand, we'll be making available the first ever demo version of Gemulator and releasing the Gemulator 96 version 4.50 upgrade. So don't miss it! The place to be is www.emulators.com and the date is Sep. 3.

In a nutshell, Gemulator 96 does everything the Magic PC and TOSWIN emulators are desperately trying to do:

- Runs on Windows 3.1, Windows For Workgroups, Windows 95 and Windows NT. You won't need to change emulators when you change operating systems. Our competitiors either don't support Windows 3.1 or they don't support NT.

- Runs in both hardware and software modes. Gemulator 96 still supports TOS 1.0, 1.2, 1.4, 1.65, and TOS 2.06 ROMs on a card, allowing you to emulate any model of Atari ST. Gemulator now also runs on notebook computers using the software based MagiC operating system. Both MagiC 2 and MagiC 4 are now supported.

- Super fast speed. Gemulator 96 has been optimized even more to the point where a 75 Mhz Pentium now matches the full speed of a 32 MHz Atari TT. Our competitors barely match the speed of an 8 MHz ST. (Our competitors fix their emulators to give bogus benchmark results to make it look like they run faster. But if you do a side-by-side comparison with a real Atari computer, you'll see the trick).

- Full screen support. Gemulator 96 can run either in a windows or full screen, just like the DOS version of Gemulator, only faster.

And the best part, PRICE: while our competitiors continue to charge from between $200 to $500 for their emulators, complete ready to run Gemulator packages cost about $120 to $150. So go ahead and try the others, then on September 3 come try Gemulator 96.

By the way, does anyone know what the status is of the So. California show that was scheduled for Sep. 21? I'd love to come down and demo the new products but I haven't heard anything first about that show or any

other show coming up. If you have any info about upcoming shows send me an email.

- Darek @ Emulators, Inc.

Humm, what happened? I answered this yesterday and nothing is
here. Anyway, you mush patch your Hard Drive so it is suppling TERM PWR
out on to the SCSI bus (Pin 26). This is how the ICD Link get's it power.
I don't know if this can be done on a Conner 180 Meg. If you have WWW
access, go to www.seagate.com and look up your model HD. They'll have
the Spec's and a diagram showing the possible patching and the use of
each set of pins.

If you are using Lynx, then press D and the currently selected link will
be downloaded as a binary.

Some time ago now, I heard of an excellent desktop known as Myriad.

It sounded fantastic, hearing from someone who had seen a beta version,
but I have not heard any more of it for some time now.

If you know who the author is and how to contact him, or if you know anything
more about Myriad, please let me know. I want to find out more about this.

Thanks.

I have a shitty, junky, stinking SLM605 laaaaaaaaaaaaaaaaaaaser
printer for sale.

Is there anyone who wants this shit-printer ?

It's located here just behind me in the closet. I don't want
to see that junk so I put it there.

Should we start off at 1 buck and let the bidding begin ?

Looking for some samples, needed for background music in game
project,
Needs to be sampled at
12517Hz, 25033Hz or 50066Hz,

Needs to loop,and not be able to tell when it does loop IYKWIM?

Needs to be as long as possible,Length of tune before loop I mean?

Any Regular Format and signed or unsigned,

Anyone well into making Sampled sound can maybe offer a selection?,
anything in size from 60000 to 400000, but definatly less than half a
meg in size please,

Well anyone got the above, ? It is for a freeware project, so can
only offer in doc credit <smile>

Cheers.............!ynoT

Sounds like you could really use a boot manager. try XbootIII, it's great.
Superboot is good to, and the Falcon one is excellent.
Otherwise it looks as if your ahdi is corrupted :^) just kidding
1)turn off your hard drive; 2)turn on your Atari; 3)open floppy disk and
folder(or auto folder) where ahdi.prg is; 4)turn on hard drive and wait for
it too power up; 5)run ahdi, _hopefully_ you will see your hard drive acknowledged!
6)select a: drive on desktop and go to menu bar to add c: hard drive to desktop;
7)go to c:\auto and rename that pesky mint.prg to you know what! :^)

Heh, well I'd have to learn GEM programming first, all I know is the
standard libraries right now... :P (though no one wants it to display
anything... Maybe if there is no command line, it'll run in interactive
mode, and with a command tail it'll just play the sample.)

As I understand it, all Esc/P2 does is have the printer itself handle the scaling of its built-in outline fonts, postscript style, rather than have the computer do it. Also, the Stylus 800 is only a 360dpi printer, so of course anything higher than 360x360 isn't gonna work.

>Has anyone had any luck with configuration?

Here! There is a complete Unix-like setup running on my machine.

>What does it take to set this up?

If you only want to connect to a provider, it's probably best to
use a modified taf (you need to update pppd and mintnet, and you
can delete all the X-Stuff. Also you can run it from a Tos-Partition).
If you want to have a Unix, like me, the KGMD is a good point to
start with.
When it is running, you should install gluestik and use cab and the
cab.ovl for stik (it's more stable than the .ovl for mintnet).
You can also use Antmail (pop3) Duftp (ftp) and so on...

Well, I was going to ask my question when I was more ready for it, but
this seems like a good time. Beyond serial sharing of drives, is there
support for the LAN port on the MSTE/TT/Falcon to connect to a PC? I know
there are network cards for the PC that allow Appletalk connection to a
multi-platform network, but is this the same hardware for the
Atari LAN and are there drivers for networking Ataris under Linux?

Thanks,

Dan

One feature I especially like in Imagecopy 4.0 is it's easy manner to
create and catalog thumbnail images of the pics you need toorganize and
manage.

This is one powerful and easy to use feature not found in too many other
applications.

(Food for thought.)

In article <R5ORyIk.graphic@delphi.com>, graphic@delphi.com wrote:
>
>... 1040STe ...
>Is 120ns the minimum speed that is actually utilized by the STe?

Acutally, 150 ns is probably fast enough, but whatever you can get cheaply
is fine. 70ns or 80ns are the most common.

>Again, if the price is right, can 4 meg SIMM's be substituted without
>causing a problem...

Yes, but unless you are planning to perform modifications, it's pointless -
the STe will see only 1 meg per SIMM maximum. You have to plug in SIMMs to
at least 2 sockets to use it, so even using 4 meg x 8 bit SIMMs, you'd get
only 2 megs with 2 SIMMs.

>How many pins can be on the SIMM's? Seems like I heard that there are
>2 types of 1 meg SIMM's: An IBM "flavor" with 8 256kchips on board and
>a Mac "flavor" with 9 256k chips on board.

You must use 30 pin SIMMs. The 72-pin (or PS/2) SIMMs are physically too
large and wouldn't work even if they would fit because the pinotu is
different. It doens't matter if you get 8-bit (which incidentally is the
Mac, or non-parity, version) or 9-bit (IBM, or parity) SIMMs; the STe will
only "see" 8 bits per SIMM. It is best to get 4 identical SIMMs, however,
for a number of technical reasons which are indistinguishable from voodoo.

I just downloaded LPS123 and couldn't get it to work on my Falcon with Magic. The TOS app in Magic comes up after either double clicking on the TTP file or trying to drag a .WAV to the program icon and the system just sits for a moment, then I get a Boom, ooh! crash (got SAM loaded, could that be part of the problem?).

I looked at all the switches in the manual and figured I shouldn't have to go through some archaic command line, was I wrong?

3525. FS: Falcon/ST hardware (US)

Newsgroup: comp.sys.atari.st
Date: 1996-08-29 00:00:00 UTC
From: Dan Phillips <xiting@worldnet.att.net>
Message-ID: <322675A6.15FA@worldnet.att.net>
Source record: 139106

Well, I've had some good bites on some of this stuff, if I can get rid of a
RAM expansion and the monitor at around $50 each, I can ship.

For Sale:

SCSI "pancake" hard drive case with AdSCSI host, ACSI cable, and
power cable (case will house 2 3-1/2" 1"H drives and 1 5-1/4' drive,
1 of each size may be removeable media. 14"W X 16"D X 3"H) $150 obo

SC1224 color monitor, 1989 manufacture, pristine condition $ 75 obo

Actionsoft RAM expansion for Falcon (takes 1 72-pin SIMM) $ 60 obo

RAM Gizmo RAM expansion for Falcon (takes 4 30-pin SIMMs, includes
optional replacement speaker) $ 60 obo

Toad Multisync switch box and ST monitor cable $ 40 obo

Prices don't include shipping/COD.

Please don't hesitate to make an offer if you're serious, my goal is to get
$215 cash-in-hand to get a Desktopper and Freekeys, so as soon as I reach that
goal, the high bidders get the item.

3528. <<>> Vidi-ST: Anyone know the difference in Version numbers?

Newsgroup: comp.sys.atari.st
Date: 1996-08-29 00:00:00 UTC
From: graphic@delphi.com
Message-ID: <ZbHR6Eo.graphic@delphi.com>
Source record: 139202

I have been offered 2 apparently different models of the Vidi-ST frame
grabber:
1) Vidi-ST version 1.2 by a person who has never used it and doesn't know
if it is for B&W and/or for "false" color shadings of the same color or actually
will show a full color frame.
2) Vidi-ST version 12 (no decimal ---- the "12" stands for 12 bit color
capture) and this owner claims this is the latest and greatest version.
Only old magazine article I found warns that the original version only
was capable of "false" color (e.g. red only) renderings of the shades on
a grey scale.
Any info is greatly appreciated. graphic@delphi.com

3529. Midex and Falcon? Help needed!!

Newsgroup: comp.sys.atari.st
Date: 1996-08-29 00:00:00 UTC
From: Tommi Hietavuo <thietavu@aton.abo.fi>
Message-ID: <3224BA02.2518@aton.abo.fi>
Source record: 139203

A friend of mine has heard that his MIDEX (by Steinberg) wouldn't work on Atari Falcon - and therefore he's afraid to upgrade his ST to Falcon.

If I understand this correctly, Midex has to be plugged to Atari's ROM-port. As this is different in Falcon, there may indeed be a problem somewhere..

Now, any good knowledge and advice would be of great value =) !

Thanks beforehand,

Tommi

If I recall correctly, this is an Esc/P2 printer... (Ignore the following
if I am wrong!) If you're looking to run this w/ PageStream, you can
use the PGS printer driver stored on atari.archive, although I've found
that some printers that use the Esc/P2 emulation can't handle the high
end density settings. Use the 360x360 settings and they work just fine.

I presume this holds for the Calamus drivers, as well?

j > with a CD ROM drive in it. Is there any PC software for
j > Windows or DOS that will allow me to read and copy data from
j > an Atrai CD ROM onto a PC formatted Atari floppy disk?

all Atari CD-ROMs are formatted in the standard ISO 9660 format
used by PCs and is the defacto "standard" for CD-ROMs - your CD
Drive in the PC will read the Atari CD-ROM just fine. I've done this
myself!

jtb@katie.vnet.net wrote in Re: NVDI with Atari works

j{ :) I have the same problem with Atari Works and NVDI.
j{ I think it's just how it is.

The problem I am having with my newly installed version of NVDI 4.11, and AtariWorks has to do with the formatting on my HP 5L LaserJet printer.

Regardless of how I configure the printer driver with the MAKEPRN.PRG that comes with NVDI, it gives me too much margin on the left and too little at the top of a document. I can adjust the margins easily with Works, but in order to have a one inch margin at the top and at the sides, I have to enter some odd values in Work's margins (L: .75 inches, R: 1.25 inches, T: .88 inches, B: 1.13 inches), which makes it a pain using the ruler in a document. Also, NVDI seems to interfere with the Portrait/Landscape settings in Works in that when I choose to print (say, an envelope) in Landscape mode, the first line (first line of my return address) gets all garbled and overprints on itself. The rest of the document is fine.

I find that I can get an envelope printed by setting Landscape mode in the NPRNCONF.CPX (Drivers) and leaving Works in Portrait mode, and then adding some jiggery pokery with the margins to position the text in the right place on the envelope.

In all, I feel that there are far too many work-arounds using this so-called (by Toad) "Award Winning" NVDI software with AtariWorks -- or am I missing something in my initial configuration? I used to have next to no problems at all using SpeedoGdos 5.03e, apart from a stray ASCII character in the upper left hand corner of every printed document -- at least the margins and set-up made sense. What's the deal?

Regards,

The first thing is to get an account with _true_ uncompressed SLIP, not CSLIP. Then use STiK and CAB and since I haven't dumped Worldnet yet for a provider with SLIP, I don't know anymore, i.e. newsreaders, e-mail, etc.

If the file is recognized as "www/unknown", this will work. But if it is
recognized as "text/plain", somewhere along the line Lynx does LF->CR/LF
conversion, which completely phucks up binaries... :P

Keep in mind, it is* beta! I tried running it on my MegaST2, couldn't get it to work. I was too lazy to set up a desktop. And the "launch" menu item was greyed out. So I tried launching CAB from the XAAES.CNF, didn't work. If I clicked anywhere, the hard drive would access, the menubar would show up, then I'd get an error from MiNT, something about the Moose driver...

Hmmm, Anyone know if you can make a QuickCam work on an ST? What I've read about it implies it doesn't use any top-secret data compression, just dumps raw greyscale frames to the serial port. Anyone have one?

Where are you planning on getting an account? I found two places with
extremely cheap 'net access. Minnesota WaveTech has personal accounts
for $12.95 a month, $24.95 startup fee. You get unlimited Shell/SLIP/
CSLIP/PPP, 5mb space for a web page, and just about anything else you
can imagine. I'm getting their 'home office connect', $19.95 a month,
two POP3 mailboxes, two mail aliases, 5mb 'buisness' homepage...
ISD.net has access for $11.95, you also get Shell/SLIP/CSLIP/PPP but
you only get 150 hours a month, and web pages are (much!) extra...

WaveTech -> http:\\www.wavetech.net
ISD -> http:\\www.isd.net

P.S. Exactly what is* a mail alias?

???? :-|
I've read the readme of MIDIMAZE again and looked at this version
of MIDIMAZE I I have. There is nothing hint that it was "cracked"
or something to read about cracking MIDIMAZE I. There is only to be
seen that the copyrights were 1987 by XANTH and HYBRID ARTS Inc..
MIDIMAZE II wasn't a PD or Freeware Game. I had to bye it. And the
copyrights were 1990/91 by Sigma Soft and HYBRID ARTS Inc. It seems
that both had the same distributor ...
The selling of MIDIMAZE II together with MIDIMAZE I as a PD-Game
was allowed by HYBRID ARTS Inc. - so it is to be read in the
readme caming with this package.
As I wrote above the programmers of MIDIMAZE II were searching for
members of XANTH with the help of HYBRID ARTS Inc. Seems that it wasn't
possible to find and contact you by your own distributor ...
Or HYBRID ARTS Inc in USA thought, Europe is so far, small, insignificant ...
Who cares ... ?
By the way, through this copyable version MIDIMAZE I will suvive :-) ...
Because there isn't any distributor for that game anymore (I dont know any ...)
MIDIMAZE would have disappeared step by step or disk by disk because of
increasing readerrors on these old disks (9 years old!!) :-)

I wish a newer version of MIDIMAZE too. But if this version should be in
grafix like doom - I think a falcon is a must. This shows is try of converting
doom to an atariplatform. I think the sequences between the races in
XMOONGAMES could be something like this. There you're flying as a ball through
a maze.
On UNIX platforms there is NETMAZE. This is like MIDIMAZE with some extended
features - not so complicated like MIDIMAZE II :-).
On Apple MAC there shall be a familiar NetMaze-Game with super grafix, but
I've not seen it yet.
On PC there I don't know anything with smileys, except someone uses LINUX as OS :-)

>1) Vidi-ST version 1.2 by a person who has never used it and doesn't know
>if it is for B&W and/or for "false" color shadings of the same color or actually
>will show a full color frame.

I have v1.28 which is only 16 shades of grey/red/whatever. It only
takes the brightness of the pixels into account.
Later a colour pack was available that included filters for a camera
and software to merge the colour seperations. An RGB splitter could
probably be used as well.

>2) Vidi-ST version 12 (no decimal ---- the "12" stands for 12 bit color
>capture) and this owner claims this is the latest and greatest version.
>Only old magazine article I found warns that the original version only
>was capable of "false" color (e.g. red only) renderings of the shades on
>a grey scale.

There is Vidi-ST 12 has the RGB splitter built in and can grab images
with upto 4096 colours at resolutions upto 640x400.
Vidi-ST 12 is probably better described as the best and last of the
Vidi range. If you have a Falcon then ScreenEye or Expose are much
more capable, but more expensive.

Rich.

Not too long now IMHO, it's in final beta testing. Many improvements
made as well.

Is it possible to get an image of TOS to use on an Atari emulator (STonX)?

I've checked around and there doesn't seem to be any place to get this. Are there any dealers that sell these images?

Kevin. (wellsk@netcom.com)

Why not find a ftp site that doesnt carry the program, upload it to
there, then link to it, thus no space used on your page ?

I presumed James wanted to know if the PC would read the Atari CDROM.
Must CDs including Playstation ones conform to a particular standard
I can never remember the name, yellow or blue book or something like
that.
Just pop the Atari CD into PC and see if it is readable. If so just
use your normal copying method, DOS prompt or Windoze file manager,
to copy the files to a 720K PC formatted floppy.

Rich.

The simplest means of getting your WWW link working is to use STiK as the stack/dialer (right now it's uncompressed LSIP only) and the rest of the package for browsing, ftp, and email. There are 2 newsreaders for STiK under development ATM, but neither have been released yet; as a temporary measure, you can log on to the shell account and run Pine, Elm, or Tin - they all support news as well as email and don't take any space on your system at home. Of course, that measn you have to work with a "live" connection. I haven't had the honor of testing either Newsie of (I think it's) FlameNews, so I don't know if they support off-line reading; we'll all find out together.

This is simply pathetic. Only in politics is mudslinging considered normal behavior; if you want your product to be considered superior to competing products, you must produce hard numbers showing where it excels, not simply make scurrilous, deprecating remarks about the other products.

Has it ever occurred to you that there might be users who have reasons to want to own and use more than one emulator? By displaying yourself as one who must resort to this sort of tactic, you may actually be driving away those people.

Hi all!

I found this in another group .. thought the musicians using ST's
might like to know about it.

Ron Yost

Hello,

Roni Music Home Page offers free down load of the Sweet Sixteen MIDI
Sequencer for Windows and Atari computers.

Two versions are available:
1. A demo version which is a complete version of Sweet Sixteen with
all
file saving disabled.
2. A "lite" version which lets the user save files but certain other
functions are disabled.

Check it out at: http://home1.swipnet.se/~w-11396

Lighten up, Rich!

I believe Darek has proven fairly well (granted in other forums) that his product is superior, especially given price. Also I tend to give him a little more credence since my understanding is that he now works for Microsloth. That edge alone is enough to allow him to _easily_ make a better mousetrap (just ask the developers that try to compete with the Bill and can't, 'cuz they aren't privy to all the OS secrets).

I must admit that Darek did rather blast away out of the ether, but we should all have a decent grasp of the Atari community by now, and Darek has been around a long time.

>> part? Anyone know?
g>
g> There's a little screw on top of the modulator box itself. iirc,
g> it's carbon so be very careful what type of screwdriver you use.

I wouldn't bother retuning it though, as long as you unplug the aerial before
you use the ST so you won't get any interference at all.

See you earlier,

Steven

> if anyone can shed any light on this matter. Thanks in advance! :)

Yeah, I get that problem now and again, too :(
I just use STiK to disconnect the modem if Oasis doesn't do it.

Easy :)

You can play au Files even on a mega ST if you convert it in Wav-files
with 525.ttp and then play it with a wav-player.

3569. Learn the Net

Newsgroup: comp.sys.atari.st
Date: 1996-08-30 00:00:00 UTC
From: Stuart@shaw1.demon.co.uk
Message-ID: <841502364_OASIS_@shaw1.demon.co.uk>
Source record: 138993

This programme is .Net made easy with a new name.

Here are some more details on it:

The LZH version is 81262
The ZIP version is 19670

Please State what you want.

It works on a 520 ST
It works on a STe and STfm
It hasn't been tested on a Falcon yet so if anyone wants to test it for me
email me and put the title FOR FALCON and I'll send it you soyou can test it
for me.

This programme shows you the Internet.
Version 1 shows you basic IRC commands
Basic FTP commands
NOS,
and a small email and Web section

If you want it email me.
When you email me reply this email or the other one.
And tell me if you want it LZH or ZIP
And tell me if you want the new versions as they come out.

If you have already emailed me it will be with you soon.

Also does anyone know a good FTP site I can put it on.

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

Mirrors for 'atari.archive.umich.edu'

United States
----

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

Email server email address Equivelant to FTP site
----
atari@atari.archive.umich.edu atari.archive.umich.edu
mail-server@ftp.tu-clausthal.de ftp.tu-clausthal.de
mail-server@cs.tu-berlin.de ftp.cs.tu-berlin.de
archive-server@Germany.eu.net ftp.germany.eu.net
ftpmail@ftp.uni-stuttgart.de ftp.uni-stuttgart.de
ftp-mailer@ftp.informatik.tu-muenchen.de ftp.informatik.tu-muenchen.de
archive-server@micros.hensa.ac.uk micros.hensa.ac.uk
mailserver@leo.org ftp.leo.org

___

The examples below are taken from a Unix environment using the usual
'ftp' program. The more user friendly 'ncftp' is recommended though,
as it's easier and more efficient to use.

[1] Starting FTP/logging into FTP site
======================================

What to type What it does
----
ftp [ENTER FTP MODE]
open FTPsite-address (i.e: open ftp.funet.fi) [OPEN THE FTP SITE]
anonymous (when asked for username) [INSERT USERNAME]
USERNAME@SITE (your email address- i.e. hallvart@sn.no) [INSERT PASSWORD]

Example:
----
oslonett.no% ftp [ENTER FTP MODE]
ftp> open ftp.cs.tu-berlin.de [OPEN THE FTP SITE]
Connected to caramba.cs.tu-berlin.de.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
----

* You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
----
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]
Connected to caramba.cs.tu-berlin.de.
----

* It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
----
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.

___

```
ls -l (or: dir) [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]

** Some FTP sites don't accept 'ls -l' for some reason. In those rare cases
use 'ls' instead (or use 'dir').

Example:
---------------------------------------
ftp> cd Music/ [MOVE TO DESIRED DIRECTORY]
ftp> bin [SET TRANSFER MODE TO BINARY]
200 Type set to I.
ftp> ls -l [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]
150 Opening BINARY mode data connection for /bin/ls.
total 4624
-rw-rw-r-- 1 ftpadm atarimod 3409 Feb 19 12:48 00INDEX
-rw-rw-r-- 1 ftpadm atarimod 37419 Mar 18 1993 50play12.lzh
-rw-rw-r-- 1 hesche atarimod 105936 Jul 24 1995 525_v211.lzh
-rw-rw-r-- 1 ftpadm atarimod 168363 Mar 10 1993 accomp25.lzh
---------------------------------------

* If you want to go back one directory:

cd .. [GO BACK ONE DIRECTORY]
cd /. [GO DIRECTLY BACK TO ROOT DIRECTORY]

\_\_\_
```

```
#######################################
226 Transfer complete.
ftp>
--------------------------------------

* You can also use 'wildcards' to ease the whole procedure of typing file-
names correctly:

Example:
--------------------------------------
ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
###################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
#############################################################################
#############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
#########################################
226 Transfer complete.
ftp>
--------------------------------------

* you can also use a 'wildcard' to get hold of single files or a specified
selection. Just be sure the wildcard is unique.

i.e. if you want to download 'stzip26.lha' and there are no other files which
start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single
command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this
file or not, you can use the command 'prompt'. FTP will then proceed to get all
the files that match your wildcard without asking if you want them.

Example:
--------------------------------------
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>
--------------------------------------

\_\_\_
```

close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]

Example:
---
ftp> close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
221 Goodbye.
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
---

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:
---
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
---

* When doing a 'close' and re-entering a new FTP site you won't have to set
up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then
restart FTP.

>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
==========
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
==========
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands

! escape to the shell
$ execute macro
account send account command to remote server

```
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
rename rename file
```

```
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).

_/_/_/
```

```
fdformat -l -d [FORMAT 720K DISK- MSDOS]
fdformat -d [FORMAT 1.44MB DISK- MSDOS]
mcopy a:{filename on disk} {copy filename} [COPY FILE FROM DISK TO UNIX]
(i.e: mcopy a:ftplist.txt ftplist.txt)
mcopy a:"*" . [COPY ALL FILES FROM DISK TO UNIX]
mdel a:{filename} [DELETE A FILE ON DISK]
(i.e: mdel a:ftplist.txt)
eject [EJECT DISKS FROM DRIVES WITH NO 'MANUAL EJECT BUTTON']

------------------------------ End of file ------------------------------

128MB is the max figure usually mentioned. There are two 72pin SIMM
slots on the AB040 board.
I have found that 32MB of FastRAM is more than enough.

Rich.

3573. Anyone using Transcendence BBS?

Newsgroup: comp.sys.atari.st
Date: 1996-08-30 00:00:00 UTC
From: rsg0910@iglou.com
Message-ID: <DwxLHp.GC6@iglou.com>
Source record: 139026

Is there anyone out there still using Transcendence BBS? I've written a Top Ten lister for it, since I couldn't find one. I could post it here if anyone wants. If the need arises, I could also write one for other ST BBS programs as well, if there's enough requests.

I have other ideas for other programming projects as well.

3574. FS: Complete Atari ST Computer system and lots of software: $55

Newsgroup: comp.sys.atari.st
Date: 1996-08-30 00:00:00 UTC
From: georgew@chinook.cse.tek.com
Message-ID: <505pk4$ml8@tekadm1.cse.tek.com>
Source record: 139027
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.other.systems,pdx.forsale,tek.forsale

Complete computer system and software for $55 in Beaverton. Includes:

Atari 520ST computer with 8MHz processor, 512Kb RAM, Graphical O/S in ROM,
printer port, RS232 port, MIDI port, mouse, joystick.
3-1/2" floppy disk drive (720Kb)
SC1224 color monitor
All original manuals and Atari ST Internals book
Software:
Atari Basic
Atari Logo
Atari Neopaint
First Word (word processor)
Thunder! spell checker
Micro C-Shell
Phaser Home Accounting
Oh no! More Lemmings!
Black Cauldron
Kings Quest III
Kings Quest IV
Questron II
Carrier Command
Typing Tutor and Word Invaders
Dungeon Master
Flight Simulator II
World Karate Championship
Karate Kid II
Major Motion
Trail Blazer
Plutos
Slaygon
Puffy's Saga
Jupiter Probe
And lots of public domain software, including a C compiler, VT100
terminal emulator, lots of other games and utilities.

Notes:
1) Everything works.
2) This is not PC compatible.
3) I want to sell this locally, not ship it

Hi All

Does anybody know how to contact Dave Oldcorn the author of Starball the
PD/Sharware pinball game.
His last know E-mail address was: oldcorn@cs.man.ac.uk but this was only
valid until September 94.
His postel address was Volume 11 Software Development,
PO Box 311,
Preston
PR3 5DZ
(England)
If anybody should know how to contact him could you get him to contact
Mike Goodman on Tel:01782 335650 as he as been trying to get in contact
with him.
Or let me know any info so that I can pass it on to Mike.

3576. Want a 1040?

Newsgroup: comp.sys.atari.st
Date: 1996-08-30 00:00:00 UTC
From: ericcron@wwa.com
Message-ID: <505seb$o32@kirin.wwa.com>
Source record: 139029

Uhhh, I've got this 1040. I don't have any software, cables, power supply, nothing! Just the computer! Anybody want it? It has 1 meg ram. I bought it at Guitar Center a couple of years ago for MIDI but I never got around to getting all of the pieces.

Free to a good home!

I am looking for anything 8-bit, so if you have something you need to get out of your basement that would be even better!

: > installing the zip on Atari is far more easier than on a pc or a Mac.

: Well, it can't be TOO much easier than on a Mac since all you have
: to do is connect it and boot the computer! On the Atari you do need to be
: sure your host adapter (on non-TT's) supports parity and that SCSI ID 5 is
: not otherwise committed.

The Mac still requires software to make use of it fully. You simply plug it
in (Falcons too, BTW), after selecting SCSI ID 5 or 6 on the back.

Source record: 139034

Hi Guys!!
Thank you very much, Keep on, fill the little questions.
I got a lot of responses so far. I am building a database file with
these responses hoping that it can help developpers.
Some results are surprising, about the most used OS or the ppl who
have an hard drive.
Every developper who asks me some result to help him for his project ,
will receive a small file about Atari community. Like that,
developper could match their products with Atari users.
Please keep on. Answer the response about your configuration etc..The
more I get, the more accurate the average will be.
PS:Nobody will have your name but me. Strictly confidential.

Source record: 139035

Do you have any spoolers installed? A good example is the Outburst TOS patch/spooler. If you do, make sure the spooler is disabled when printing via NVDI cuz a big ole raster file shure will crash a lot of spoolers that are out there.

Hi, I recently downloaded from I don't remember where a very very nice graphic program. The name is escape5 or something. I think the author come from Dresden, Germany.
The program is new and full working version. This prg works only on falcon, and uses true colors mode. I would like to know the address because I want to make a link from my homepage. If no one knows about it, I think i'll have to zip it and put it directly in my page without a link, but it bothers me because of the room, I don't have that much room in my account. Bye.

> ST<->DOS) ?

Try MiNT and MiNTNet. You can even compile most of the Linux Programs.
The problem is that you probably won't get far with 1MB of Ram. I guess
for a minimum Setup 2 MB is reasonable. To have a really usable Setup
4MB is absolute Minimum. This is still not enough to run X11 on it...

Chimera is not very good. Arena is cool, but sometimes a bit buggy.
Mosaic is good, but it needs AFAIK motif. This is only buywhare on
Linux68K.

> using the CAB-for-MintNet overlay? I haven't (yet) put Linux on my
> system, so I can't comment on how difficult it is, but it seems to be

> installing Mint, MintNet, etc.

There are very easy to handle setup tools a least for the Intel Linux (I
have not tried Linux68K yet, since my Falcon only has 4 MB), that allow
almost any DAU to install it. In my oppinion the hardest part with Linux
is System administration. If someone feels able to administrate a Linux
System, he can also set up and administrate a MiNT System.

Gee thanx, but I already have the original MidiMaze. I was just musing
about a simular type of game that resembles Doom :)

While on the subject, another cool idea would be a level editor for
MidiMaze. The mazes are just text files and they explain how tomake them
in the manual. So many ideas, so little time... :)

This may be a theoricial possiblity that I have played with some time ago, but it could be possible for a program to be written that can log on to the shell account and go straight to Lynx. Then by pressing certain keypresses automatically, it can do a 'capture' of the web page and save it on a local disk(on the ST) and have something like CAB access it.

When you click on the link, it may pass the URL to this program(the browser may be an accessory for this to work) and do the same thing over again. When you 'click' on a link to another page, the browser(CAB or remote Lynx) ends up passing the URL of it anyways.

Now for the beastie which is the pictures...have CAB set to recieve no pictures so it can display the web page like Lynx. To get the picture, you can click on it and have the 'program', or the interface to Lynx, download it. Though not only will it have to download to the remote server where you're accessing Lynx, but also download via Z-modem. For this, and other stuff like sounds and files, at least a 14.4K modem is recommended for speed; considering this is not like having all the pictures being downloaded 'along' with the web page.

I know, this sounds like an absolutly crazy project and needs lot's of clever experamentation. But, an interface such as this can pass the 'right' keypresses that all works in the background. But still, not everyone can use Netscape whether the corporations admit it or not.

I hope this can be a springboard for some clever coding for this... :)

From: Paul.Muehlbauer@flight.org
Message-ID: <099_9608301225@flight.org>
Source record: 139051

Ok, it looks like the BBS I'm using is going to cut it's Internet connection. So, after hemming & hawing about it, it's time for me to get a real Internet account!

So, to get this newsgroup (is that right?) what do I need with my Falcon? I'm planning on getting a WWW & shell account (I believe they said they use Basher for the shell???). Can I recieve the group as a packet, & reply in a packet, etc.? Or is it all live, while connected?

I've done a bit of WWW stuff (on clones), so at least I know what I'm looking for there. But I've never done e-mail & newsgroups, so I'm just looking for a clue of where to go, what utilities to use.

Thanks.

3601. IDE HardDisk on a ST ??? Please help !

Newsgroup: comp.sys.atari.st
Date: 1996-08-30 00:00:00 UTC
From: dube0866@eurobretagne.fr
Message-ID: <5076js$kmk@gaia.eurobretagne.fr>
Source record: 139054

hello !

I have a 170 mb ide (AT) hard drive. I'd like to connect it to my favorite
ST (an oldie 520 stf,, 1mb Ram). Is it possible ? If so, how do i do this ?
Can i build a kind of converter or something like thing ?
please contact me at: dube0866@eurobretagne.fr

Thanks in advance !

Nicolas Dubee

>Freezedried, Connect, Stalker, etc. and using the Lynx software resident
>on your server's machine(s). By it's very nature, shell access is TEXT
>ONLY, and if you can access Web pages from it, you will only see the text

A shell account is byte oriented. Those bytes need not represent
written text. I used to use FTP in this manner quite frequently
on shell accounts.

It would require some multi-platform hacking on someone's part but,
what he's asking should be possible. I also think I have seen such
things available for Windows (why they would need or want it boggles
me tho).

You'd could use browser front end transfering in ascii (uucp) or some
other standard protocol (zmodem) and an http client in place on the
shell side to grab urls from the net at large and put them on the
host for transfer (via uucp or zmodem).

I've also seen packages claiming to simulate a SLIP connection over
a shell account as well.

As long as there is a 'real' connection to the net somewhere, it should
be at least possible... ...even if no-one is willing to do it...

>portion, and whatever text the page author has inserted to be displayed
>in lieu of an image (most of the time this means, sadly, [IMAGE]).
>
>If you want Web access with pictures, you have to go with STIK/CAB, or
>MINT for the Atari machines -- so far, Bill Gates has decided to ignore
>us so there is no Microsoft Browser available, neither is there Netscape.

Those browsers would eat an ST for lunch and ask when is lunch
going to arrive...
('scape and IE are system hogs on 4M+ machines)

Just an idea here. You don't mention the model but I think we can assume
that it is at least 6+ years old. Which pretty much means his drive may be
going. There are a couple docs around that can detail the
replacement/upgrade of the original drive to current 1.44 meg drives. Or he
could get in touch Toad computers or Computer Direct for a kit to do it.
Their URLs are:

For Toad:
http://www.ataricentral.com/

For Computer Direct:
http://www.compdirect.com/

Sounds like you have a problem with your CD Rom drivers on the PC. I know of no
Atari CD Roms that aren't iso-9660 compatible.

Dan

> correctly is bacause my ISP is not really giving me Slip (yep, for once
> I wish they had given me the SLIP) <grin> Anyways, while its offered on
> the menu, its not supported.

Sometimes providers get right on my nerves saying they support things
when the dont.. I estimate over 506f mails to me asking for help
with setting up stik are problems with providers not giving the
customers what they asked for originally..

> So, my next question is; when are we going to see the PPP version of
> STik? Does anyone have a timeframe on this? Thanks in advance!... :)

I cant answer this one really its up to Dan when he does it :)
I can say that he's busy with other things to do with stik at the
moment and it will probably be done after that.. when that will be is
anyones guess everyone seems to be rather busy atm..

Nick.

3607. posting messages

Newsgroup: comp.sys.atari.st
Date: 1996-08-31 00:00:00 UTC
From: bh@okcforum.osrhe.edu
Message-ID: <509oqf$kcs@frazier.backbone.ou.edu>
Source record: 138860

An open message to all message posters.

I think most people that read the comp.sys.atari.st newsgroup, also read comp.sys.atari.st.tech and comp.sys.atari.programmer. Therefore messages posted to one of these groups should not need to be posted the others.

If you feel that it is necessary to post a message to more than one of these groups, Please, cross-post it, instead of posting it seperately to each group. When a message is cross-posted, most, mail readers will automatically mark the message read in later groups, so the reader doesn't have to receive them over and over again.

Thanks,
Bill

3608. NVDI print to IMG Help

Newsgroup: comp.sys.atari.st
Date: 1996-08-31 00:00:00 UTC
From: jklimch@curly.cc.emory.edu
Message-ID: <509qar$plp@curly.cc.emory.edu>
Source record: 138861

I use NVDI 3.02 on a Falcon. I want to use the Save as IMG function so I can use Straightfax without rebooting with speedo for faxes. I can't get this function to work. In the Printerconf. CPX, I have the option to switch from my default printer to the IMG.SYS printer. However, I can't get Atari Works to recognize it. It just prints out with the regular printer driver. This is true even if I save the Printerconf with the img.sys driver. If I close the CPX window then re-open it, I'm back to the printer driver again. Any ideas?

From the Holy Book of <c20_9608301528@flight.org>
as spake by Callum.Lerwick@flight.org (Callum Lerwick) :

>[someone whose attributions have been lost writes:]

>> If you are using Lynx, then press D and the currently selected link will
>> be downloaded as a binary.

>If the file is recognized as "www/unknown", this will work. But if it is
>recognized as "text/plain", somewhere along the line Lynx does LF->CR/LF
>conversion, which completely phucks up binaries... :P

That's never happened to me, and I do this all the time from f.i. Umich.

3610. Bulk file renamer needed

Newsgroup: comp.sys.atari.st
Date: 1996-08-31 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <960831Z173106.419dave@mbha.demon.co.uk>
Source record: 138863

Hi y'all,

Does anyone out there know of a utility to bulk rename files?

For ecampmle, I have a bunch of files named test1.tga - test9.tga, which I need to rename to test01.tga to test09.tga, by inserting a '0'.

I suppose the logical operation is:

rename test?.tga test0?.tga

Any ideas out there?

3611. Atari Mega 1 for sale cheap

Newsgroup: comp.sys.atari.st
Date: 1996-08-31 00:00:00 UTC
From: furyous@msn.com
Message-ID: <00001bdd+00004909@msn.com>
Source record: 138864

I'm unloading my Atari addiction, please help, my wife wants her closet back! I have an Atari Mega 1 with both color and B/W monitors, a Spectre GCR and a Syquest 44 meg cart drive formatted with 1 Atari partition and 2 Mac partitions. All three partitions are chock full of MAc and Atari software, inc WordUp, Fontz, several old copy/cracking utils for the Atari side and Word, Excel and Pagemaker for the Mac. Make your offer. If you don't need the Cart drive, I'd be willing to trade the whole shbang for an early SCSI adapter so I can use the Syquest on my PC.

3612. STuff 4 sale
